This book is affectionately dedicated to my grandmother-in-law, Ramona Jeanette Sawyer Barth, better known to my family simply as "GG" (for Great Grandmother), circumspect supporter of most of my pursuits, who first drew my attention to the illustrious Sawyer ancestry and to the works of her distinguished and prolific father, Roland Douglas Sawyer. Little did she suspect what she was getting me into.

Acknowledgments

A book of genealogy of this sort cannot be researched or written by one person. The "author," myself in this instance, is not so much a writer as he is an organizer of a complex array of materials supplied by many others. Even this book itself is not a final result, but rather an interim update to an interim report on the present status in 2001 of knowledge about one family and its many allied families. The material assembled here includes "original" research performed by myself to attempt to document and corroborate as much as possible in the time available to me the details included in this book on more than a couple thousand people. However, it would be impossible for one person to verify all the connections presented in this book, even while taking full advantage of the many new tools available to genealogists such as e-mail, faxes, computers, CD ROM drives, and so forth. Most readers, never having been involved in such an undertaking, would not suspect the degree of effort required by innumerable people besides myself to make a book such as this possible. I will try below to mention people who made major contributions, though in doing so I am sure to fail to mention many others who also contributed. People have often asked me *how* one goes about discovering the answers to genealogical questions about ancestry. I usually respond by saying that there are literally hundreds of different methods commonly used by researchers, and these make up the subject matter of many books about how genealogy may be done. I state this now, because I feel the brief mention I am able to make here below of those who have been the major contributors to this effort cannot pay proper tribute to the extensive labors performed by many of them, often over many months, in tracking down innumerable hard-to-find details.

First I must acknowledge my debt to the marvelous work the late Roland Douglas Sawyer of Kensington, N.H., whose original genealogy of the Thomas Sawyer Family of Hill, N.H. published in pamphlet form in 1928 inspired this present work, and has been incorporated here more or less in its entirety. One has to spend some time working seriously at genealogy before he or she can begin to appreciate the scope of Roland Douglas Sawyer's achievement in this work. This is especially true in view of the fact that he performed his research without the aid of any "modern" tools whatever, except a typewriter. One can only wonder what he might have accomplished had he had computers, modems, telephones, faxes, microfilm, video, microfiche, Xerox copiers, and so on.

Secondly, this work owes a special debt to Nathalie Smith Potts, Roland D. Sawyer's granddaughter, who helped extensively on the Calvin Sawyer branch and provided extensive advice and encouragement.

Thirdly, I wish to acknowledge my wife, Natasha Salvo's, many hours of expert editing and proofing of various stages of the text, as well as extensive technical advice on various aspects of the use of the computer, without which this book would have been far less professionally written. Tasha is the great granddaughter of Roland Douglas Sawyer, and granddaughter of Ramona Jeanette Sawyer Barth. Though Tasha is not fascinated with genealogy, she nonetheless contributed considerable effort to this project.

Fourthly, I want to thank Howard U. Gant for his considerable work on the Thomas Warren Sawyer branch of the family.

Finally, I wish to acknowledge the contribution of my two sons, Julian Joseph and Simon Barth Norwalk, who, though they were too young in 1995 when the work was first published to comprehend genealogy, were nonetheless an inspiration.

From time to time others have commented to me that they were aware of many mistakes and errors in this genealogy. Certainly there were some errors, which I have endeavored to correct as I learned of them throughout my research. However, my own view is that the overall work was incredibly accurate and that the errors were relatively few and often of limited significance. No work of genealogy can ever be 100% accurate. Often one works with old, handwritten texts and transcription errors occur. People use various names throughout their lives, and thus, their names are often variously reported, and so on. Furthermore, genealogy depends for the most part on the accurate reporting of historical facts by large numbers of people. Yet sometimes people have a stake in history being recorded inaccurately, either because they dislike someone, are angry with someone, or because of some aspect of the true record that they rightly or

wrongly feel ashamed or embarrassed about. As a result, it is not so rare for genealogical facts to be reported falsely on purpose. These are among the many factors that often undermine a genealogist's best intentions to achieve 100% accuracy. It is in the nature of critics to imply that they could have done a better job themselves. Unfortunately, the same critics are always absent when the original work is being done.

I have attempted to mention below in alphabetical order some of the those who were *not* absent when the original work was being done, who contributed extensively to this project. However, many other family members and researchers were kind enough to speak to me or write to me and provide details of their immediate families, or to provide other technical assistance. Those family members named below generally provided assistance or information beyond their own immediate families.

Chapter 1

Introduction

Roland Douglas Sawyer, who is more responsible than I for this present book, is best known for his political career. He spent twenty-eight years as a Massachusetts legislator from 1913 to 1941. In fact, he is said to have been a Massachusetts legislator for longer than any other Massachusetts legislator before or since. He also ran for Governor in 1913 and for Congress in 1924 and 1942, losing all three elections. He was also well known as a Congregationalist minister, and at the time of his death at age ninety-five, he was thought to be the oldest practicing Congregationalist minister in the United States. However, though less commonly known, Roland D. Sawyer also found time during his life to write many books on various subjects, though surprisingly, he seems not to have written any on his family's history. This subject interested him greatly and inspired him to publish two well-known pamphlets on genealogy in which he offered brief sketches of the lives of some of his ancestors. He published the first of these pamphlets on the Sawyer Family of Hill in 1928 when he was fifty-four years old. In addition to the books and pamphlets, he published a staggering number of newspaper articles throughout his very long life, including many about the early history of his family and New England. One of the hard-cover books he wrote was a history of the town of Kensington, N.H. where he was born, raised, and lived off-and-on throughout his life, and where he is buried, in the front row next to the main street, as he had requested, "so he could keep an eye on what was going on."

Chapter 1, Introduction

Most people give little thought to the question of relatives beyond their immediate families, though most of us have more extensive families than we realize. In thinking about families in the abstract sense, there are two distinctly different aspects to consider. The first is the question of ancestry covered in the next two chapters. For the present let us just emphasize that only siblings have one hundred percent the same ancestry, whereas even first cousins have considerably different ancestries. Thus, a book limited to ancestry alone would be of interest only to a rather small group of living people, plus their eventual descendants. The second question concerns kinship and asks who our living relatives are and how our larger extended families have fitted into history. When considering ancestry, one looks only backwards in time seeking to learn about one's direct forebears. If one is exploring ancestry for the first time, one is struck by two salient facts. First, almost all of us have the same number of ancestors, especially among our most recent ancestors, if we could only discover who they all were. Secondly, the number of ancestors we all have rapidly becomes truly mind-boggling, once we delve backwards in time beyond the first few generations.

On the other hand, all of us do not have the same number of living relatives. Some people may have none or only one or two or a few, while others may have literally thousands. If you were the only child of two only children of four only children and so on back for several generations, then you will have few living relatives. Whereas, if you were the tenth child of two parents who were themselves the tenth children of parents who also came from large families, then you are likely to have a very large number of living relatives. However, one is not guaranteed to have many relatives even then. Wars, disease, poor economic conditions, natural disasters, or all combined may have caused unusually high mortality among your ancestral families, so that not many children grew to adulthood or survived long enough after adulthood to have children of their own. These things seem fairly obvious when we think about them; however, it is remarkable how little most people do think about them.

In this book we try to deal with both aspects of genealogy: ancestors and descendants. First, we explore the ancestry of Ramona Jeanette Sawyer and her five siblings. In the two chapters on ancestry, we learn a great deal about several hundred people, all of whom are direct ancestors of these six individuals. This research has been successful in tracing some ancestral lines back nearly four hundred years. Whether we can trace a particular family name back through many generations depends on a variety of factors, especially whether or not ancestors lived in a developed culture with an organized system of record keeping, and also whether or not local conditions, especially wars, allowed these records to survive. In America, on the frontier, for example, sometimes there were not yet court houses or churches or other institutions to preserve records. In the case of the Sawyer ancestors, we have been unusually fortunate in that the ancestors almost all arrived very early to America, within perhaps only fifty years of the first arrival of the Pilgrims in Plymouth in 1620. As a result, they joined stable communities on or near the coast and did not move inland to more remote communities for some time. As a further result, records about them were kept and were not lost, so in the end we were able to assemble an unusually complete ancestral record for twelve and in some cases more than twelve generations.

Every person's ancestry is different. Some people have ancestors from higher classes, sometimes even nobles or kings and queens. In the case of the Sawyers, we have not discovered any ancestors from either the wealthy or noble classes. Almost all the early immigrants among the Sawyer ancestors seemed as far as we could tell to be from among the working classes of England, who came to America seeking a better life. Some were lower ranking military officers, clergy, or merchant seamen.

The Structure of this Book

This book begins with a discussion of ancestry. First, we discuss ancestry in a general way, then we provide as much detailed ancestry as is so far known of the ancestors of Ramona J. Sawyer and her brothers and sisters. In many cases, this extends backwards in time about twelve generations to about 1600. In several cases it extends backwards to the early 1500's, and in two cases to about 1460.

Following the two chapters on ancestry, we discuss what is known of the life and times of Betfield Sawyer of Hill, NH and of his descendants. This is revealed in extracts of some writings by Roland D. Sawyer and another Sawyer descendant, Howard U. Gant. In these chapters, we learn something of the kinship between the various branches of the Betfield Sawyer descendants. These chapters are probably of interest to a much larger number of living people, not to mention their future descendants, than are the chapters on ancestry. Following these narrative chapters is a chapter primarily containing photographs. The first edition of this book published in 1995 was the first book I attempted to publish, and it was assembled hastily in an attempt to have it ready before the Sawyer Reunion in Hill, NH that year. The limitations at the time only allowed for a few photographs, and those were very badly reproduced. This time I was determined to publish a much larger number of photographs and to do so in a much higher quality.

Finally, the last chapter is a genealogy of the descendants of Betfield Sawyer, which lists every known descendant up to shortly before 1995. No attempt has been made to do additional research since 1995 or to add new people born into the family in the past six years. The people in both the genealogy and the ancestry are indexed in the back of the book.

Sources of Genealogical Records

Most people commonly wonder how knowledge of their distant relations can be assembled in the absence of family records. There are a multitude of possible documents, that can aid us in the study of family history, but a detailed discussion of them is not our focus here. Nevertheless, it needs to be emphasized that without documentary evidence we could neither learn nor prove much about our ancestors. Genealogists and others who have studied families are often struck by the great range of available records of all kinds. What we can learn about more distant ancestors depends to a great extent on the original existence, as well as on the preservation of many different sorts of documents. To mention only a few there are: census records, indexes to census records, birth, marriage, and death records, church records, tax records, wills, probate court records, land sales, land grants, court records of all kinds, newspaper and media articles, obituaries, military unit records and enlistments, other military records, pension records, social security records, immigration records, applications for immigration, steamboat passenger lists, county histories and records, other historical records such as published local histories, various family records, family bibles, letters and correspondence, published genealogies and family histories, Who's Who, city directories, telephone books, cemetery directories, and so on. The list is almost endless. It is surprising how many records of various types do survive.

In the 18th century and before, one seldom is so fortunate as to find civil birth records, although some family Bibles record birth dates over a surprisingly long span. In the absence of basic information such as dates, family groupings must be "assembled" by cross-referencing a wide assortment of other records such as those just mentioned. Church records are sometimes an excellent way to trace a family's history, though finding records requires many hours of meticulous work. Many church record books have been photographed by the Mormon Church of the Latter Day Saints. The L. D. S. Church has more than sixteen million rolls of microfilm of such records in an archive in Utah, which fortunately they are quite willing to share with members of all faiths. Land records can be very useful, as they often exist when other records do not. They place both buyer and seller in a particular place at a particular time, and in addition they sometimes show relationship between the buyer and seller. Moreover, they are almost always witnessed and therefore contain several signatures, often of other family members, which can document that they were alive at the time of the transaction. Another excellent source of historical information is published periodical literature of all types, especially newspapers. Not only do news stories often mention people by name, especially in smaller towns, but they regularly publish obituaries, as will as birth and marriage announcements.

The Writings of Roland Douglas Sawyer

Several members of Roland D. Sawyer's family who frequented his house in Kensington during the latter part of his life have described how it was filled in almost every corner with books and papers. He

valued these papers greatly, and was concerned that they might be lost in a fire, so in 1932 he had a small, windowless building about eight feet square built of brick about a hundred yards behind his house. It had a metal door. This small building was universally known as "The Vault," and it was here that he stored many of his most valuable papers. Construction of such a vault seemed Quixotic to some and was referred to occasionally with mild derision. However, it was also prophetic, since his house in fact did burn nearly to the ground in 1968, a couple years before his death, whereas the vault still stood in 1994, though it had fallen into serious disrepair. After his death, most of these papers were conveyed to the University of N.H. according to his will. However, one of his earliest workbooks remained with his family, entitled simply "Scrap Book No.1 of My Ancestry 1903 - 1934." This appears to be a source book for many of his genealogical writings and is now in the safekeeping of one of his grandchildren, Nathalie Smith Potts, who loaned it to me, together with two other scrapbooks.

These scrapbooks contain a collection of genealogical writings, as well as many pages relating to annual Sawyer Family Reunions for those years. I noticed with interest that Roland D. Sawyer had published at least three different series of newspaper articles relating to his family's early history. The first of these was entitled "Betfield Sawyer of Hill." The badly yellowed news clippings were glued into the scrap book with no reference to what paper had published them. The second series was entitled "History of Earlier Hampton." The third series was entitled "Early Days in Hill."

All of these genealogical writings overlap somewhat with each other, and in some cases, with the first few pages of the 1928 pamphlet. Therefore, I have combined a large number of these writings, which I have included in Chapter 4 of this book. For the most part I have quoted his own texts verbatim to retain as much as possible the colorful style and character of Roland D. Sawyer's originals. However, I have removed overlapping paragraphs and other redundancies, and made other minor editorial changes to weave the many disparate pieces into a more readable whole. I have not included every article but only those that seemed most interesting from the viewpoint of family history.

Though probably few today have read any works of Roland D. Sawyer, his literary output was prodigious, and he was exceptionally well-educated, though largely self-taught. Though I myself have seen none of his papers at the University of N.H. and have read only his one book on Kensington, and the three scrapbooks I have had in my home for a while, these are to me quite incredible in their depth. For example, in 1927 alone, on page 157 of one of the books, he catalogs his literary efforts for that year and states he read 133 books. Earlier, in the year 1924, when he is fifty, only slightly more than halfway through his long life, he catalogs his writings in detail, offering this preface:

> "The wealth of most people is in money and property - mine is in my stock of literary collect, and the information in my head. Joyful labor is its own reward, and the years I have spent in learning things, in writing down and collecting facts, this all repays me for the countless hours of labor thus spent. From those far-back days when Gram got me a new pencil from Rufe Hilliard and gave me paper to 'mark and write' down to the present when I crack the typewriter keys a half day to write my recent essay on the klan - I get paid for it all in the joy of the performance."

The following is an abbreviated list of Roland Sawyer's "collect" at age fifty: 4 books, 11 Knowlton booklets, 30 scrapbooks of "Running Narrative of Life," 25 literary scrapbooks, 30 scrapbooks of brochures of writings, 15 duplicate scrap books, 50 typed brochures, a series of diaries since 1895, 5 boxes of news clippings containing personal work and mention, 60 letters to press, 40 poems, 242 sermons and papers, 28 addresses, 88 newspapers articles, 266 (more) sermons, 88 (more) studies and addresses, 90 (more) poems, and 915 pieces in newspapers. All this from a man educated only in a small rural public school, who was first raised to the trade of shoe making and who did not even leave home in Kensington to study for the ministry until he was already aged twenty-one years.

Rev. Roland D. Sawyer, right, with his son-in-law Rev. Joseph N. Barth, Sr.

It seemed to me that Roland Sawyer's feeling for the subject of family history was unusually palpable, and I was touched by this. Unfortunately, neither the scope nor the present subject of this book can encompass more than a few tiny extracts from the writings of this extraordinarily prolific man. However, I thought it worthwhile to try to include some insights into the motivations of a genealogist, since so many seem perplexed by an interest in this subject.

> "How little we know of our ancestors [wrote Roland Sawyer]. We have recollections of grand parents, and a few traditions of great grand parents, but back of that is only a record of names. The record is as meaningless as that in Genesis, where we read of the Patriarchs: They were born, married, begat children, and died. All this shows the average ingratitude of the human being. It was the struggles and sacrifices of those ancestors that enabled us to exist and enjoy, and yet they are to us unknown, or else mere links in a genealogical chain. It would seem that to search out some record of the lives of one's ancestry were then only a decent filial respect. And especially ought we to do this here in America, where the oldest family is but ten generations old."

Simply put, I think an interest in genealogy has to do with reaching a deeper understanding of one's connectedness not merely to history, but to the infinitely broader tapestry of the life of the human species. Again quoting from Roland Sawyer in 1934, when he was aged sixty:

> "Facing death since I had the break down in health at eighteen, I have passed through many different moods as to the disposition of my dead body. At that first time I favored cremation, and in 1895 visited Forest Hills Crematory, and wrote praising such idea. Then came my rapture

with Nature in 1907, and I felt with Thoreau, 'With joy shall I delight to be buried in it.' Now as I grow old, I think of sleeping with my kin, and think how good would be the small square plot in the front corner of the cemetery, between Amos Rowell and the end - (with the highway sign removed)."

And thus it came to pass, too, though not yet for thirty-four more years, exactly as RDS had described.

A peaceful spot for endless rest,
  Is yonder church-yard shade.
A spot my happy past has blessed -
  There let my clay be laid.

There near the ancient house of God,
  Where once in childhood hours,
So many times my bare feet trod
  O'er grass and summer flowers.

The spot is surely hallowed ground,
  For there my kindred lay -
And there in tears we gathered round
  When they were laid away.

Calm and peaceful is the thought,
  When comes life's end and I shall die,
My worn-out body will be brought
  Here with my kin to lie.

Happy indeed are they who rest
  In the home town graveyard plot,
A place which love and hope have blessed
  With faith the fathers taught.

A peaceful spot for endless rest
  Where friends shall lay my flesh away,
Mid scenes the happy past has blessed,
  Will peaceful sleep this worn out clay.

How I Came to Write about the Sawyers

Writers and researchers are usually intertwined with their subject matter in mysterious ways, so I am including here a brief sketch of my own life and ancestry. I was born in New York City on February 27, 1940. My father, Edward Norwalk, was an attorney, also born in New York City in 1904. My father's family was Jewish. My grandfather was born Jacob Nowak in Ciechocinek, Poland, and my grandmother was born Dora Heilperin in Suwalki, Poland. These two towns were about a hundred miles apart, and both at the time were in Russia, which controlled most of Poland for almost all of the 19th Century. Another of my father's ancestral families were the Eilenbergs, through my great grandmother Ziesel Eilenberg. Both my father's parents came to America at almost the same time in 1889, met in New York, married late in 1899, and had five children.

My mother was Christine Hennessy, born in New York in 1905. My mother seems to have been raised Episcopalian. My mother's father was David W. Hennessy, born in New York in 1864, while my maternal grandmother was Frances Lebaron Beyer, born in Belgium in 1867, who met my grandfather on a ship to America in 1899, when he was returning from a year studying painting in Paris. They married a short time

later and also had five children. My grandfather Hennessy died quite young at age forty-two in 1906, thirty-four years before my birth, of alcoholism some say. My grandmother Frances lived on until 1935, yet also died five years before my birth. My grandfather Jacob became a tremendous success in the manufacture of women's clothing, yet he killed himself shortly after the stock market crash of 1929, eleven years before my birth, fearing he was losing all his money. He was wrong. Of my four grandparents, I knew only my father's mother Dora, who died when I was about fifteen. My mother became depressed not long after my birth and was institutionalized, for life as it turned out. I was sent away to a special boarding school when I was five years of age. Though mine was not the easiest of childhoods, I mention this primarily to explain how it came to be that I knew so little about my own family. Family knowledge is taken for granted by most people. However, not all of us grow up with it.

After grade school near Poughkeepsie N.Y., I attended a Quaker boarding school in Pennsylvania, graduating high school in 1958. Next, I attended Harvard College, receiving a BA in Literature in 1962. Upon graduation, I joined the Air Force on active duty and spent five years during the Viet Nam War as a pilot flying B-52 aircraft from Dow Air Force Base in Bangor, Maine. I left the Air Force in 1967 with the rank of Captain and attended The Harvard Graduate School of Business Administration for two years, receiving an MBA degree in 1970. Afterwards I worked as a management consultant for several years, both in Washington D.C. primarily for the federal government, and in Boston working with clients in the private sector. I also worked in several small business situations including real estate, renovations, and wholesale import of herbs and spices.

In about 1977 I liquidated what assets I had accumulated and bought a forty-foot sailboat called "Daybreak," which I sailed most of the next five years back and forth to the Caribbean, accumulating about twenty-five thousand sea miles, about three quarters of which I sailed alone offshore. Returning to Boston from the sailing life, I started a computer business which prospered for about ten years. I married Natasha Ramona Salvo in 1987, when our first son, Julian Joseph Norwalk was also born. In 1989 our second son, Simon Barth Norwalk was born. About the time my children were born, I began collecting information about my wife's family to eventually give to my children, and came in contact with the writing of Roland D. Sawyer, my wife's great grandfather. The more I read of his work, the more interested I became. In 1995 when the first edition of this book was hastily published in anticipation of a Sawyer family reunion, we were living in Newton, MA. However, amidst all of the activities of the past ten years we had somehow managed to find time to build a house in Newcastle, Maine, and also a house on the island of Saba in the West Indies. In 1997 we moved full time to Newcastle, Maine where we have lived the four years since.

William Sawyer, Born 1615 in England

The earliest Sawyer ancestor about whom we have good documentation is William Sawyer, born about 1613, possibly in Lincolnshire, England according to some authorities, or possibly in Berkshire according to some others. William Sawyer is said to have been the son of John Sawyer, born about 1582. However, Eleanor Sawyer, a Sawyer historian and scholar whose eight-hundred page genealogy of Sawyers will be published this fall, lived in England for several years and went to Lincolnshire to look for the John Sawyer connection and could not find it. William Sawyer was a farmer, who arrived Massachusetts in about 1636 and went first to Ipswich. Several writers have thought that he came in the ship Hopewell. However, recent searches of passenger lists have not yet found his name on any ship. In any case, he was established in Salem four years later in 1640, and by 1644 he was in Newbury.

There are at least six previously published accounts of the early history of the Sawyer family in New England, and Sawyers are mentioned prominently in many genealogies and histories of early America. William was among the earliest European settlers of America, arriving only sixteen years after the first "Pilgrim" settlers arrived at Plymouth in 1620. After the first harsh winter of 1620 during which exactly half of the one hundred and two passengers and crew of the Mayflower died, the flow of English settlers to New England increased steadily until by 1632 it is estimated that a total of about three thousand settlers had reached the Massachusetts Bay area. This expansion was facilitated, according to Roland D. Sawyer, by the fact that the local Native American population had been infected with smallpox in 1615 and in 1616

by John Smith's sailors, which very rapidly reduced the Native American population from an estimated fifteen thousand to probably less than two thousand. Two other men named Sawyer arrived at about the same time as William, one named Edward Sawyer born 1608, the other named Thomas Sawyer born 1616. These two are surmised to be brothers of William Sawyer, though no proof has yet been found.

William Sawyer became one of the founders of the town of Newbury, Massachusetts. Newbury and other towns in the area were modeled after English towns of the period. These English towns were especially notable for their careful record keeping, which was superior to most other European countries of the time. Thus, rather excellent and extensive documentation exists for the first several generations of settlers. However, as control over the new territories was consolidated, settlers expanded outward in all directions founding many new towns, and sometimes subsequent record keeping was not as well maintained as in the early generations. Thus, genealogical records of all kinds for the 18th century are not as available as for the 17th century.

William Sawyer, Sr. of Newbury had twelve children, eight of whom survived to adulthood, married, and had children. These eight were: John, Samuel, Ruth (who married Benjamin Morse), Sarah (who married Joshua Brown), William, Mary (who married John Emery), Stephen (the great great grandfather of our ancestor Thomas Sawyer of Hill), and Frances (who married Thomas Treadwell). These eight children produced altogether forty-six grandchildren for William Sawyer, who survived to adulthood and married, so that by the end of the 17th century, the William Sawyer family was a very large and well-established family in New England, not only in the Newbury-Hampton-Kensington area, but also throughout the State of Maine. One can easily understand that if as many as three hundred years ago, in about the year 1700, there were already forty-six distinct, adult "branches" of the family of William Sawyer Sr., that there might be today many, many quite distant living relatives. In fact, just among the descendants of Thomas Sawye,r there are a very large number of William's 10th, 11th, 12th, and 13th generation descendants alive in 1994, who are documented in this book. Imagine if all the descendants of the forty-six families of 1700 were carried down to the present. Using a computer database of ninety million adult Americans with published telephones alive in 1994, we find 17,034 people with the name of Sawyer. Perhaps forty percent of these might be assumed to be spouses of Sawyers, rather than Sawyer descendants. However that forty percent could perhaps be assumed to be approximately equal to the Sawyer minor children alive in 1994 not listed in the database. At all events, seventeen thousand is the best guesstimate we have of the Sawyer descendants alive in America in 1994, these being descendants not only of William, but of his two possible brothers, who arrived as early as he did, plus whatever other persons named Sawyer may have immigrated after these first three arrived. One genealogist has stated that Sawyer is today the 75th most common name in New England.

Betfield Sawyer and Hill, New Hampshire in 1995

This present work concerns itself primarily with the descendants of Betfield Sawyer, one of the probably very large number of William Sawyer descendants living one hundred years after William at the beginning of the 19th century. Betfield was William Sawyer's great great grandson. For the moment I will gloss over the details of Betfield's life since they are covered later. However, as a young man, Betfield Sawyer traveled from Southern N.H. where he was born in Newton, to central N.H. to the region then known as New Chester.

This land was first surveyed in 1753 by a team of sixteen men led by John Tolford, according to Calvin Winroth, who has delved deeply into the history of the land holdings in this area. They established regular lots of about 100 acres, measuring 80 rods by 200 rods. In 1763, there were only three settlers in the area, who apparently returned south. By 1767, there were two permanent settlers, Captain Cutting Favor and John Tolford, Jr. By 1773, only six years later, there were thirty-seven male land owners in the region, and in 1778, the town was officially incorporated as New Chester, which it remained until it was renamed in 1837 as Hill, N.H., in honor of Governor Isaac Hill. When Betfield arrived there with his family in the winter of about 1799, there were said to be only sixty-eight families living in the region.

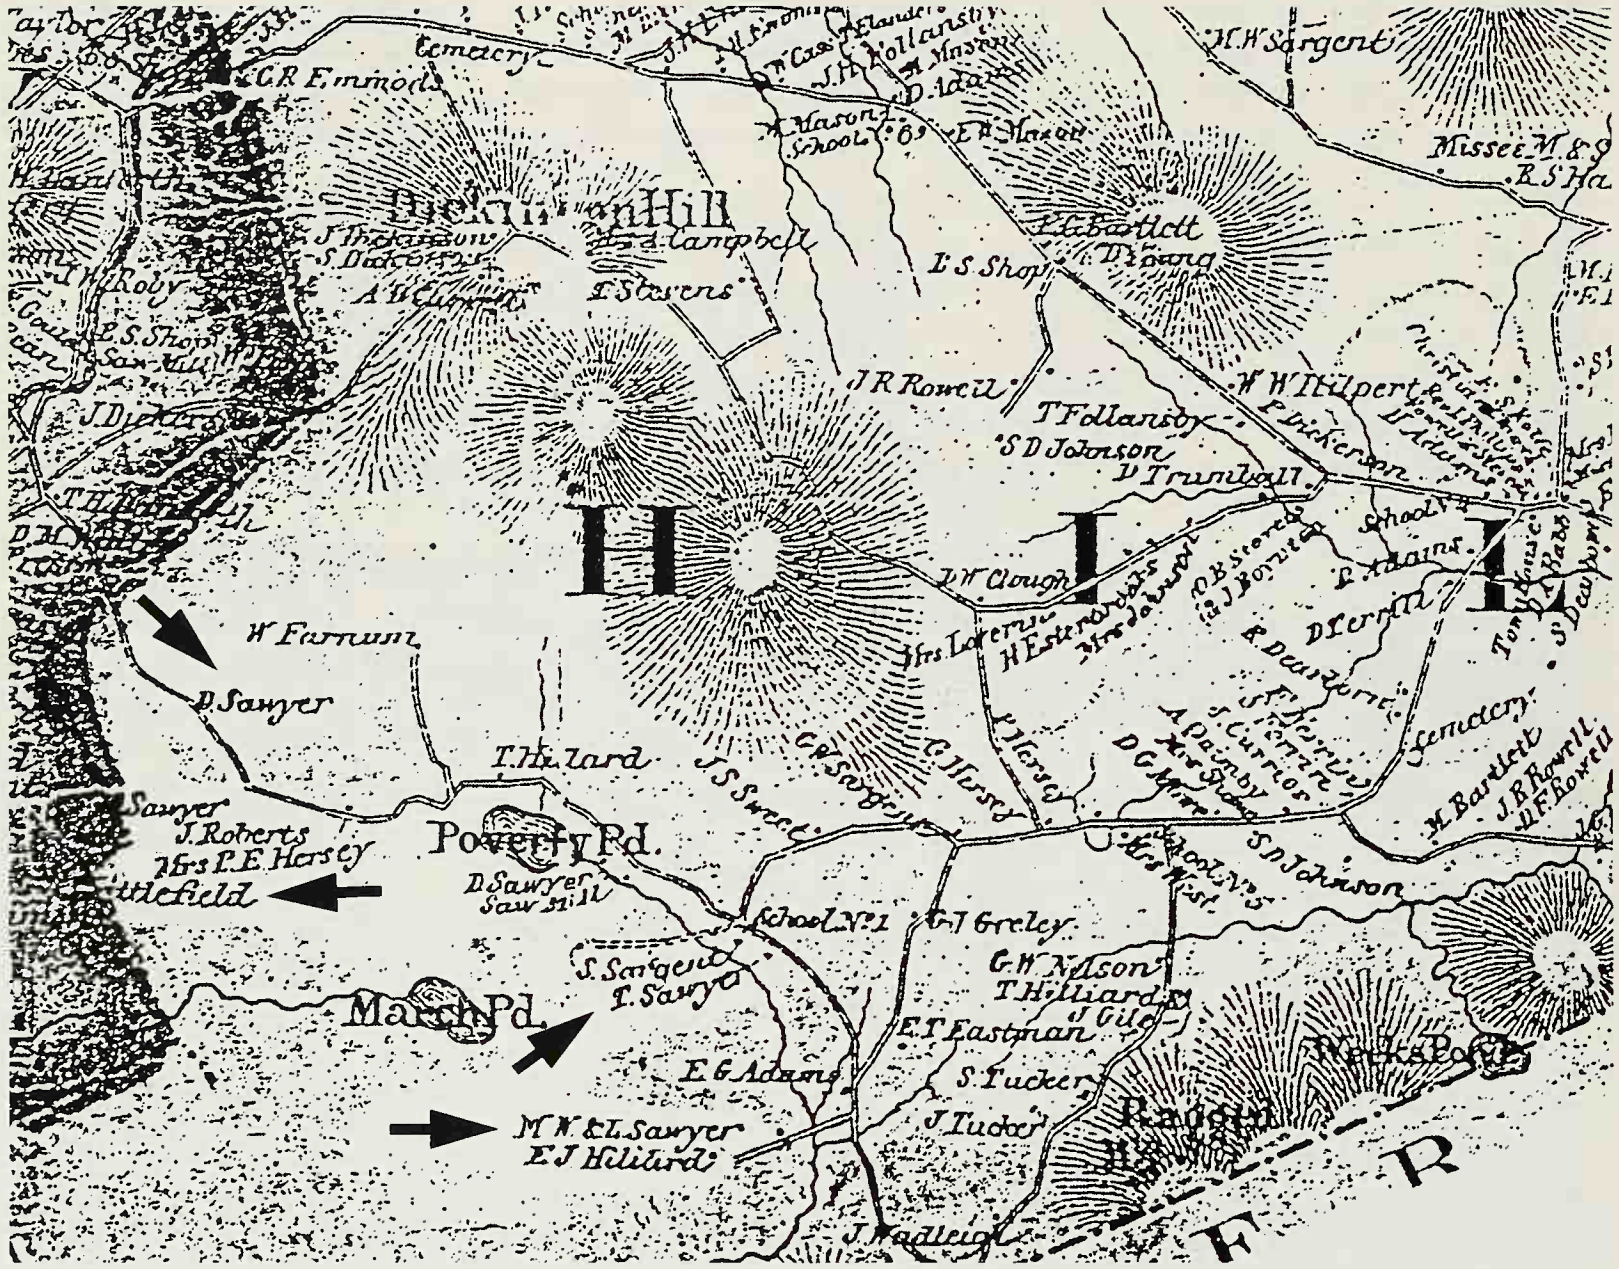
The arrow at center points to Poverty Pond, just south of which David Sawyer had his saw mill, and slightly further south Betfield and Thomas had their farms. Roland D. Sawyer wrote that it was the long series of European wars between the English and the French, which were carried over into the North American "colonies," causing almost continuous warfare in Northern New England between 1689 and 1763 known as the French and Indian Wars, which in turn kept northern New Hampshire from settlement by the English for a long time. After peace came in 1763, the French withdrew into Canada, and a large portion of northern New England became safe for settlement for the first time. During this period many people from southern N.H. and other parts of New England moved north in search of new lands. They often traveled in winter as Betfield did, using oxen to pull heavy sleighs. This was the easiest and most reliable way to move heavy tools, food supplies, and other necessary equipment in the absence of decent roads and bridges.

A contemporary map of the region from about 1860 is shown below. Betfield first owned land in Section 17. One section contained two hundred acres. Over the next several decades, Sawyers bought and sold many small parcels of land in the region. Calvin Winroth spent several days going through all the deeds and land records he could find, and succeeded in tracing about three quarters of these transactions. Betfield Sawyer built a farm, and eventually two of his sons settled close by. Betfield's son Thomas built a farm, and Betfield's son David built a sawmill. Although the two farms and the sawmill have long ago fallen in and disappeared, and the forest has grown back, the foundation holes and stone foundations still remained in 1995 to mark the exact locations of these dwellings. Thankfully an excellent photograph of Thomas Sawyer's farm taken in 1903 has survived, which helps make a positive identification of that site possible today, despite the fact the stone walls appear almost a foot higher in the photograph. In the past century the annual falling of the leaves has increased the topsoil, filling in against the old stone walls. In the early 1980's, the Hill Historical Society was formed and chose as its first project the renovation of the old town hall and meeting house in Hill Center, opposite the church, which was built in 1800. Recently this society has begun to prepare maps showing the exact locations of the early farms and their remains, including those of the Sawyer family.



Western part of Hill, NH in about 1860. Several Sawyers are marked in tthe vicinity of Poverty Pond. David Sawyer had his farm at arrow at upper-left, as well as saw mill just next to the pond. Another Sawyer whose name is unreadable is just under David, and below him at arrow is Jeremiah Littlefield, father of Susan Adeline, who married Luther Sawyer. Thomas Sawyer's farm is marked by arrow slightly below Poverty Pond, and just below him are the farms of Meshack Weare and Luther Sawyer, lowest arrow.

In my view, the most interesting Sawyer site to visit in Hill is the early Sawyer burial ground, which was originally on Betfield Sawyer's farm, and is where he and his immediate family are buried. Astonishingly, while the buildings have all disappeared completely, several of the gravestones have escaped the ravages of time almost entirely, appear in nearly original condition, and are far better preserved than many gravestones of much later manufacture. This is possibly because they appear to be made of slate, which perhaps weathers better than other types of stone. Furthermore, the craftsmanship of the engraving appears to be of an unusually high quality, and two of the stones are quite large and dramatic in size, and contain several lines of poetry. On Betfield's stone appears the following verse :

"Reader,
Go praise your God, believe on his son,
Twas he who died, for all as one.
His death for all, is not in vain,
For all who die, shall live again."

Roland D. Sawyer visited Hill at least several times as a young man, including in 1903, when he took the photo of the Thomas Sawyer farm below, and in 1909, when he first copied down in his scrapbook the inscriptions on the gravestones in the Sawyer cemetery. He visited the site again in about 1918, when his daughter Ramona was a little girl, and his own description of this visit appears in Chapter 4.

Thomas Sawyer's farm in Hill, NH photographed by Roland Douglas Sawyer in 1903.

At the same time in 1903, Roland D. Sawyer took some photographs of the cemetery, which though not very clear, showed that the land surrounding the cemetery was then still largely cleared of trees. In 1918, Betfield's house was still standing, with two or three rooms still usable, though the house was badly run down. Thomas's house a half mile away was also standing at the time, as shown in the 1903 photograph. But since there were no longer any people living close by, the woods grew up quickly and to such an extent that when Roland D. Sawyer returned a decade or two later, he was no longer able to find the cemetery. The site was in fact lost until about 1982, when Nathalie Potts and her sister, Barbara Powers, advertised in local newspapers for anyone who could lead them to the place. Fortunately one local resident did respond to this add, and the location again became known to Sawyer descendants. When first "rediscovered," it was so overgrown as to make it especially hard to find. Since that time, the Sawyer Association has paid a small fee of $25 each year to the Town of Hill, which has kindly agreed to keep the site somewhat clear of vegetation.

The result of these efforts has been to restore the site to a state of great beauty. As a genealogist I have visited my share of cemeteries, though I am not especially interested in them. However, this Sawyer cemetery seems unusual to me. The place itself has become one of great natural beauty. There are no other signs of civilization for miles in any direction. The trees in and around the cemetery have grown up quite large, providing a heavily shaded woodland setting, in which, on clear days, sunlight dapples through onto the ground in bright patches. The forest floor in the immediate area has been well cleared of brush, and some ground-covering plant has taken root, providing bright green contrast with the reddish brown of the pine needles. The overall effect is one of unusual tranquillity, suffused with the redolent piney smell of the woods. There is also a feeling of aesthetic simplicity, where these several large, clearly readable stones rise dramatically amidst an otherwise seemingly virgin landscape, undisturbed by all other signs of human presence. In fact, it is now hard to believe that close by, less than one hundred fifty years ago, most of the surrounding land was cleared for fields, and two large families were born and raised for two generations. One cannot help reflecting on the ephemeral nature of human existence, seeing that almost all signs of this

bustling activity have so quickly disappeared, leaving behind only these elegant stone markers. Such reflections are also inspired by the simple inscriptions on the stones.

Graves of Betfield Sawyer and his wife Hannah still stand side by side, though a couple other stones have toppled over, and one was broken. The stones are thought to be the work of Betfield's son David, who in mid-life became known as a preacher. The workmanship is unusually fine, and the slate stone used seems almost unaffected by the passage of so much time.

Another such verse is inscribed on the nearby gravestone of Betfield's son Luther . . .

"This world I once delighted to see,
As I am now, you soon must be.
As you are now, so once was I,
In body formed of dust, to suffer and to die.
But now the spirit to God has risen,
The same as yours soon must be in heaven."

Such verses may not have been wholly original with David Sawyer and were more likely simply typical of verse found on gravestones of the period. Nevertheless, they impart slightly more of the spirit of the people laid to rest in that place than the simple dates themselves would do, and I think they add significantly to the impression conveyed by the place. Unfortunately, Luther's stone, while still very clear, was broken in two at some earlier period, and now lies flat on top his grave. Another simple inscription that made an impression on me was on the gravestone of Hannah Thompson, Betfield's wife, which still stands erect next to her husband's:

"Clay to clay and dust to dust,
Let them mingle, for they must.
But look aloft, the spirit's risen,
The grave cannot the soul imprison."

There are probably four or five other graves clearly visible still, including that of David Sawyer's two young children, Luther B. B. and Mary H. E., and Betfield's daughter Mary Loverin. A careful inspection might discover some others. Many of the rest of the Sawyers who came afterwards are buried perhaps ten miles away in the East Andover Cemetery. This includes Thomas Sawyer and his wife Juanna, their two younger unmarried children, Betfield and Betsy, as well as Thomas's son Luther Sawyer and his two wives and two of their children and the wife of one. Thomas's daughter Isabelle Sawyer Parker and her husband James are also buried in East Andover. There are doubtless some more distant kin buried there as well. And about a half mile away in the church yard is the grave of Thomas and Juanna's son, Thomas Warren Sawyer and one of his wives, Lucy Sleeper.

As it is not impossible that the Betfield Sawyer cemetery might be lost again in the future, I am recording here some relatively detailed directions to find it, without which the first-time visitor might have difficulty. From Boston, driving time is about two and a half hours. Take Interstate 93 North to the Franklin or Tilton Exits. From Franklin, N.H. take Route 3A North to Hill. The center of the town of Hill is very small, and you can miss it unless you are paying attention. Refer to map on page 16. From the Hill General Store continue North on Route 3A one mile to a left turn onto Murray Hill Road.

From this turn you will be climbing continually on a good black-top road, which eventually becomes a good dirt road. After two and two tenths miles you will reach the Hill Historical Society building on your left, which is opposite a white church on your right dated 1800. Bear left onto Currier Road, and after one mile you will pass the Ferrin Cemetery on your left. After this it is about one more mile to a fork where you must bear left again, then another mile to a "T". At this point, go left for about one tenth mile and you will find a good logging road to your right at the base of a moderately steep hill. Park here and walk to the right on the logging road for about three tenths of a mile to a small gravel pit on your left. At this point the logging road peters out, but continue straight ahead about one tenth more miles on a fairly clear forest trail, and you will find the Betfield Sawyer Family Cemetery.

Thomas and Juanna Scribner Sawyer

Thomas Sawyer was born Jan. 24, 1796 in Newton, N.H. If we define William Sawyer as being the first generation of Sawyers in America, then Thomas Sawyer was already in the 6th generation of Sawyers in America. Thomas Sawyer married Juanna Scribner, and like his own ancestor William of Newbury, MA, also had twelve children, one of whom was adopted, and like William, eight of these twelve had families who had children. These eight were: Calvin, Mary (who married Horace Clay), Meshack, Thomas W., Isabelle (who married James Parker), Luther, Orrin David, and Viola (adopted, who married Charles Grant). Of the other four children, Betfield died at age seventeen by drowning, Betsy died at age six, Clem married and lived to old age, but had no children, and Harvey married and had two children who both died in infancy.

As of November, 1994, we have traced 847 known descendants of Thomas and Juanna Sawyer. Some of these married 476 other people, so that the Thomas and Juanna Sawyer's descendant families total 1,321 people with their spouses. This total is estimated to be possibly 25-50 people short of the actual total, since not every last descendant has yet been traced.

Some people already familiar with Sawyer family history may question or wonder at my spelling of the name Juanna. It has numerous times been pointed out to me that her name is spelled in the more common fashion, Joanna, both on her gravestone and on the gravestones of her two children buried beside her in East Andover, N.H. Although it is true that it is spelled Joanna on the gravestones, Roland D. Sawyer made a point of spelling it Juanna, since he said this was the way that she had spelled it herself. Thus, I have simply carried on Roland D. Sawyer's usage. To my knowledge, no one has ever found a birth record for Juanna Scribner, causing some to wonder at the legitimacy of her birth. Such a document might have shed some light on the issue of spelling. But without it, the question of spelling seems arbitrary.

Of the eight children of Thomas and Juanna Sawyer who had children, we are now able to name perhaps ninety-five percent of all the descendants down to 1994. This includes the descendants of Calvin, Mary Ann, Thomas W., Meshack, Luther, and Orrin. This leaves only two of the eight who had children about whose descendants we so far know very little beyond what Roland D. Sawyer told us in 1928. These two are Isabelle (Parker) and Viola (Grant) (adopted). Of these two, Isabelle Parker probably has relatively few descendants, since a letter from Daisy Uda Sawyer dated 1947 to Roland D. Sawyer mentions that only the four children of Mary A. Parker and their children were living at that time.

Isabelle and Viola's Descendants Not Yet Researched

Regarding the descendants of Isabelle Sawyer Parker, we know of at least three people reported by Roland D. Sawyer in 1928 who may have had or did have descendants, and there very likely may have been some others in the same generation born after 1928. The first of these was Ethel Bryant and Winifred Dexter, who had one son Winifred M. Dexter born 1916. The second of these was Fred E. and Edith Bryant who had at least one daughter Phyllis D. Bryant, born in 1923. The third of these was Isabel Bryant and Carl Chase, who had one daughter Elizabeth M. Chase, who was born 1924. Within the last few months we have found Elizabeth Chase, who is was age seventy in 1995 and living in Derry, N.H. She was never married and has no children, so this leaves only the first two mentioned above who may have descendants. Even if we assume children of these two, it is hard to know how to find them, without knowing names or where they were born. Of the daughters, one can try to find them single, though it is far more likely they are married, and then it is very hard to find them without knowing at least the family name of the husband. Our best lead on this branch until very recently was the fact that according to social security records, Isabel Bryant Chase died as recently as 1981 in Derry, N.H., which is where she lived sixty years ago. Although this did lead to her daughter Elizabeth, it has so far not lead any further. Unfortunately Elizabeth's phone is unlisted, and attempts to contact her in other ways have so far failed. We believe that she did receive at least one message regarding interest in her branch of the family. However, she was apparently suspicious of such interest on the part of people she did not know and has so far not responded. Eventually more may be learned about Isabelle's descendants from Elizabeth.

Regarding Viola Eastman Sawyer Grant's descendants, we have essentially zero clues to pursue to date. Although I think most people who work hard at something would like to do the best job they can, I don't think that simply because I have made a good beginning, that I am obligated to make this a life's work, nor that I am obligated to postpone indefinitely publishing a great deal of information, simply because it is incomplete. I am rather hoping that further information will eventually be revealed as a result at least partially of my publishing the information contained in this book.

Concerning Sources and Accuracy

In concluding this introduction, a word about sources and accuracy is in order. Some historians feel that to publish any fact without providing sources for it is unscholarly and unthinkable. However, genealogy is almost always a labor of love. Only a minuscule number of genealogists make any money at it. The rest of us unfortunately lose considerable money at it, not to mention considerable amounts of time. And has anyone heard of any institution of higher learning awarding a degree in Genealogy? Therefore, I think we

genealogists are on our own, and not beholden to the arbitrary standards of others. Only those who themselves have undertaken projects of this scope can appreciate the tremendous amount of work involved. And often this work is made more difficult by the numerous obstacles created by family members with private agendas. Some wish to hide the fact that a particular child has a particular parent. Some wish to hide the fact that they or someone close to them had a particular spouse. Some simply wish to forget entirely and wish history to forget entirely that they were ever connected with a particular family. Some are simply distrustful of anyone they do not know personally, even a relative, or sometimes especially a relative. Such "human" factors can make the labor of recording the history of living generations a trial, as all genealogists know.

This writer's motives were curiosity, the desire to preserve the work of his esteemed predecessor Roland D. Sawyer, plus the desire to preserve information for the use of future generations, including my own descendants, who might be interested. I hope that any descendent who wishes to verify or go beyond information contained in this book will find the guideposts contained herein both useful and sufficiently accurate. It was certainly my intention to achieve the maximum accuracy possible. However, when dealing with 1300 to 1400 descendants, perhaps half living, minor errors are bound to creep in, despite editing efforts to comb them out, plus continual cross-checking inherent in the process. People are often reluctant to volunteer information for various reasons, but they will always speak out loudly when you tell them something about their family that they regard as incorrect. Much of the information gathered here was collected verbally by telephone from the family members themselves, and I, like most genealogists in general, was obliged to rely on the integrity and accuracy of my informants, even while recognizing that in some few cases people are determined to obscure some portion of the factual record. In addition, I had the benefit of extensive materials collected by Roland D. Sawyer. When I began this research I had only my own family in mind and had no idea whatever of writing or publishing a book. Therefore, I did not proceed in an organized manner to record all sources, notes, and references as I did in my later books. However, since the first edition of this book in 1995, I have learned a great deal about publishing, and happily computer technology has advanced quite a bit making it easier for me to include about one hundred photographs, maps, charts, documents, and so forth, so that I hope I have succeeded even better in this second edition than in the first in conveying the impression that there is indeed a solid foundation for the information presented in these pages.

Some Sawyer descendants at the Sawyer Reunion in 1983 in Kensington, NH. Unfortunately no one wrote down identifications for this photograph. The author's wife, Natasha Salvo, is the middle person among the three people kneeling in front. Her mother, Vanessa Barth, is kneeling on her left. Standing directly behind them is her grandmother, Ramona Sawyer Barth. Standing behind the woman with the baby is Nathalie Smith Potts, and to her right, Alan Lewis, and next to Alan on his right, Azuba "Zubie" Getter Fulmore, another granddaughter of Roland D. Sawyer.

Recording all sources would have greatly increased the length of the finished book and its cost, plus the effort and time required to complete the task would probably have postponed publication until the next

century and possibly into some other writer's lifetime. It is fairly commonplace for genealogical researchers to discover hidden, lost, or forgotten collections of documents and artifacts relating to family history, which people have simply put aside indefinitely, because they feared they could not deal with the material with the degree of scholarship they imagined the world at large expects. Thus, vast amounts of family history are simply lost forever. I find this sad. Genealogy should not be about proof! It should be about painting a picture and hopefully inspiring others to paint their own pictures and filling in further details. Just as Roland D. Sawyer's work lead to this work, basically because I found it worthy of continuing, I hope this work may eventually lead to other work. In our own place and period of history, namely 20th century America, even the most humble individual will leave extensive documentary evidence of his or her passing. Thus, it should be a relatively easy task for others in future generations concerned with sources to verify the facts recorded herein. I myself know, if others do not, the degree of effort required to produce this work, and I find it sufficient. If there are those who will read this hereafter who should be inspired to produce a fully sourced and annotated version, I applaud them and offer them permission to do so, using this text, if they wish.

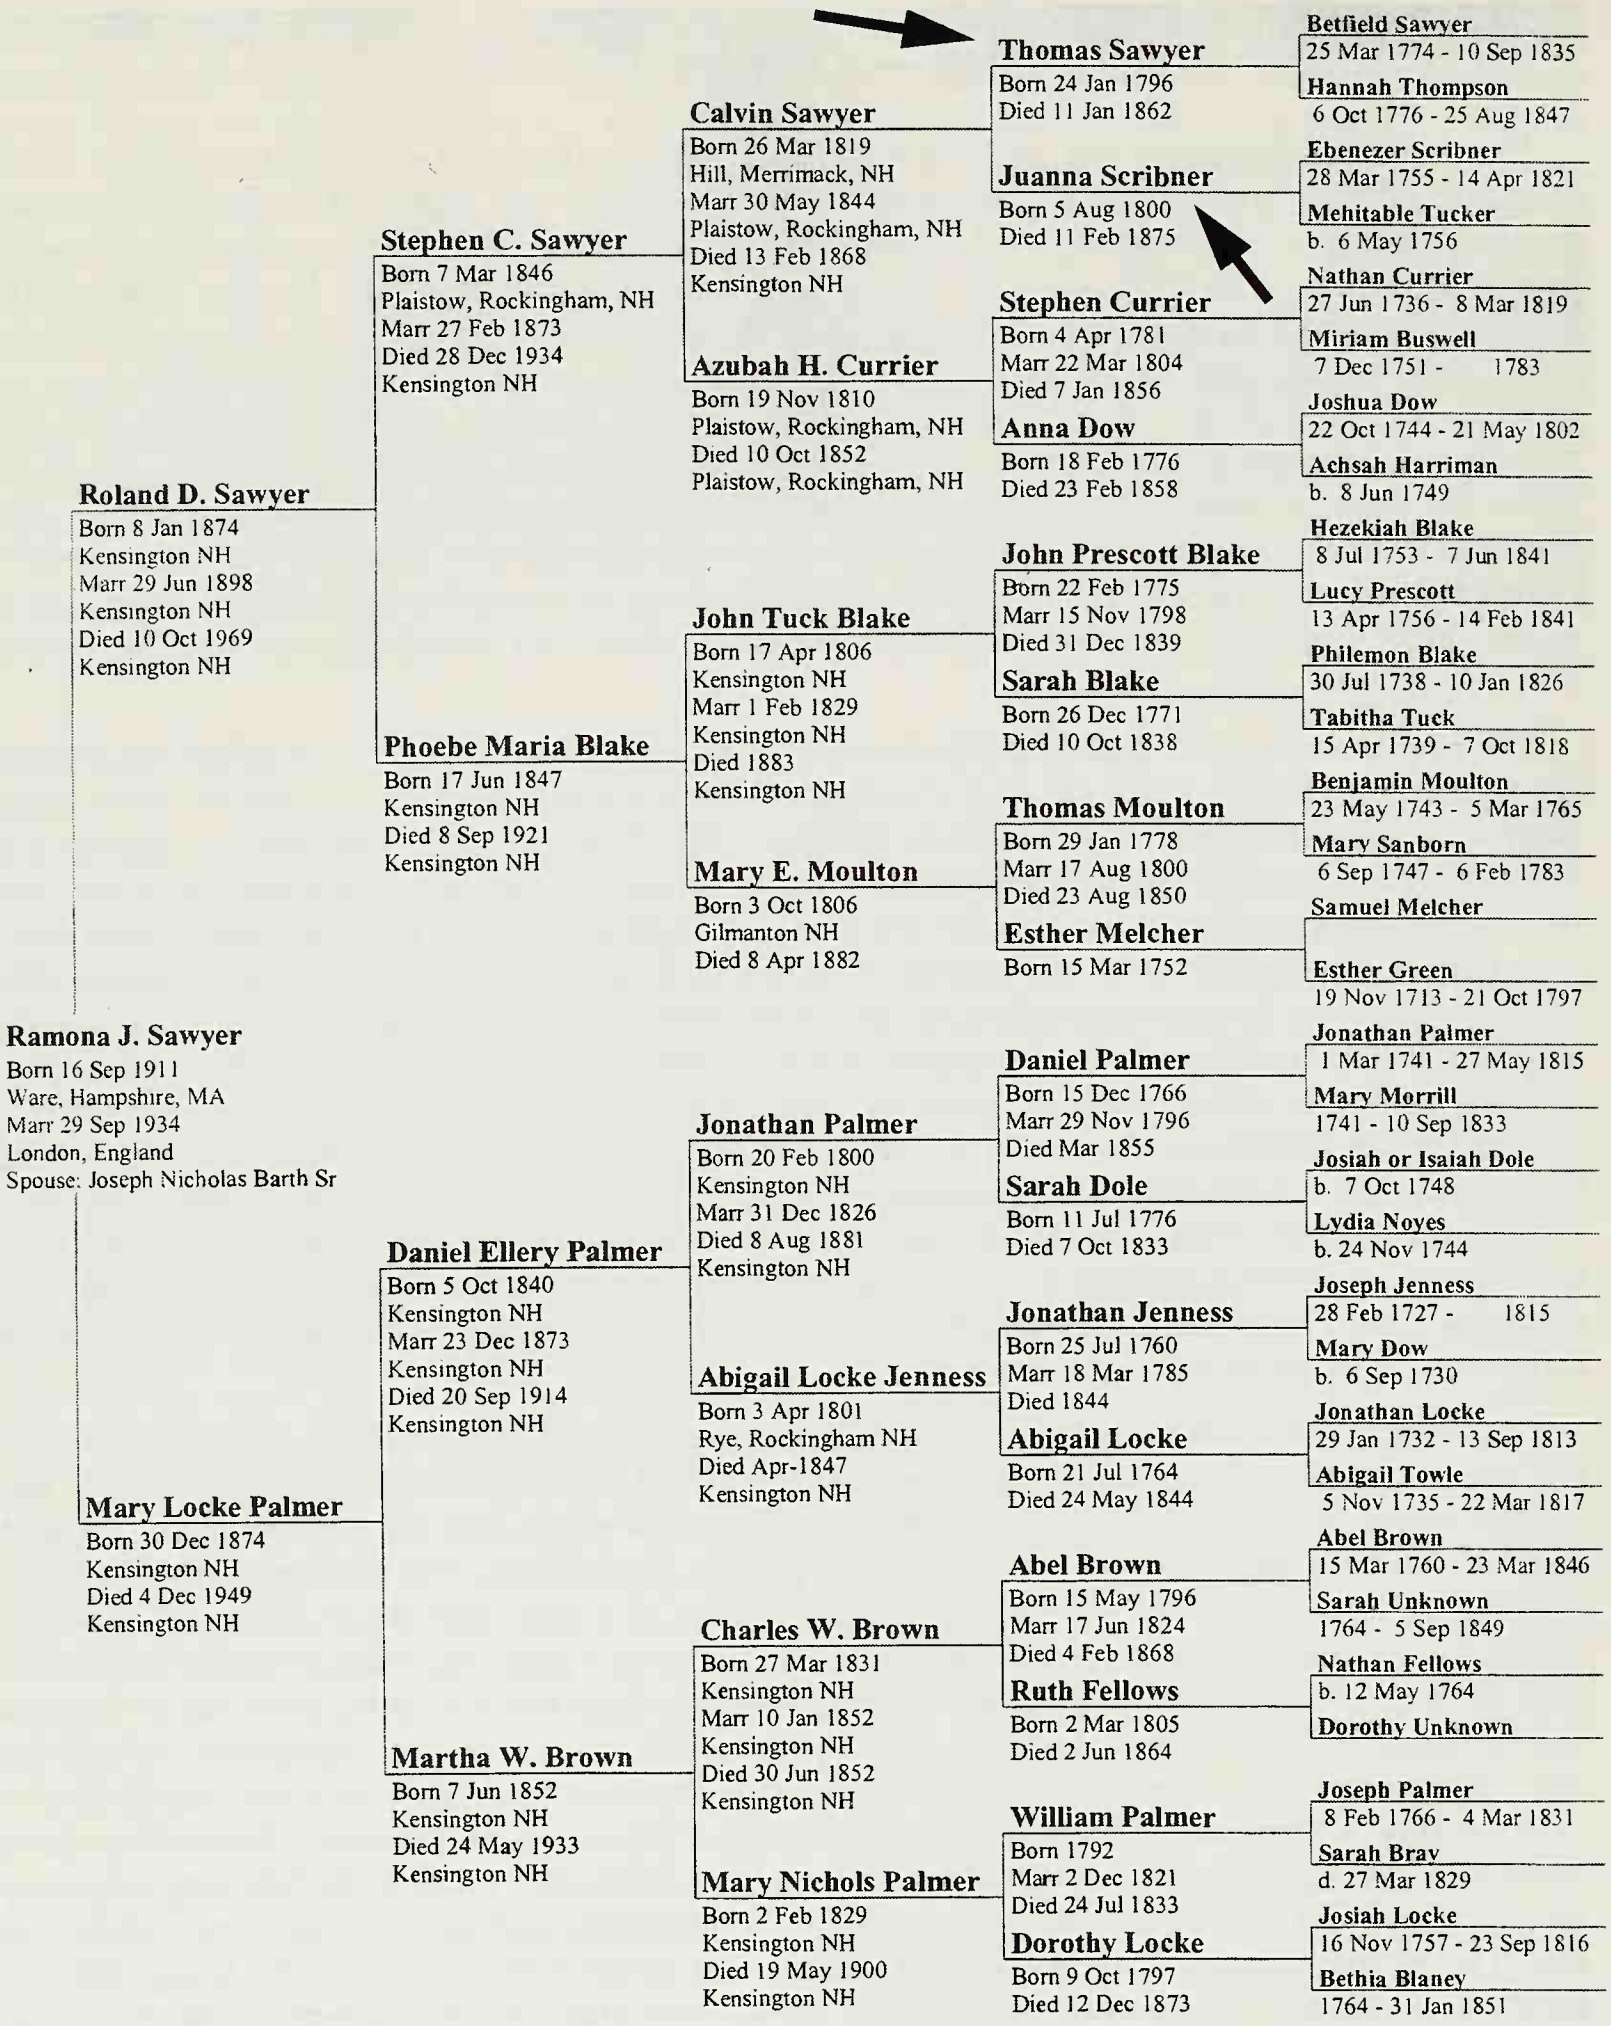
Chapter 2

Ancestry — A General Overview

Most people, if they ever think about their ancestors, do so only seldom, and then they usually do not think beyond their grandparents or great grandparents. Those who are interested beyond this are often primarily interested in the ancestors who carry their same surname. Few people realize the staggering number of ancestors we all have in only a very few centuries, or the multitude of other families with different surnames from which we all are descended. Yet when we go back even just a few generations, it rapidly becomes apparent that we all are a mixture of very many families, all but one of them *not* of our own surname. Thus, if we considered only ancestors of our same surname, the study of ancestry would be quite limited, since most ancestors would not be considered. Also, such a limitation would be arbitrary in nature. For example, consider just your grandparents. Your father's father had your surname, but his wife, your grandmother on your father's side, was born with a different surname. Similarly both your mother's parents were born with still two more different surnames. From the standpoint of heredity, genetics, and so on, all four of your grandparents were equally important in influencing your life, despite their having four different surnames.

The introductory chapter explained that the study of genealogy tries to answer two of the fundamental questions of life, namely where did each of us come from, and where do we fit into the universe? Genealogy tries to answer these questions in two different ways. First, genealogy explores our ancestors, of which every human being ever born has exactly the same number, if each of us could only know who they all were, though sometimes these ancestors are not always different people. This exception is discussed a little later in this chapter under the heading "Converging Lines." Secondly, genealogy explores other people to whom we are and were related, including our living relatives. The answer to the first question regarding ancestors will usually be of interest to a much smaller group of people, since only one individual or sibling group can have all the same ancestors. Thus, even a close relative such as a first cousin will have only half the same ancestors that you have. The answer to the second question can be of interest to a much larger group, since the number of living relatives a person has can be extremely varied. Some people have a very large number of first, second, and third cousins, while other people have very few or even none. Some people have the misfortune to be born into a time of war or disease or both, and it can happen to some that almost everyone in their families, including the generation just before them is killed, leaving them with few living relatives.

Nevertheless, the question of where we came from interests most people at sometime in their lives in one way or another, and thus the first question usually asked of genealogists concerns ancestry. After only a small degree of initial pondering it will be obvious to most people that the number of our ancestors doubles with each succeeding generation. What is perhaps less obvious is how staggeringly large these numbers rapidly become. We will discuss this mathematics in a little more detail shortly. Meanwhile a small inkling of this can be seen in the Ancestor Chart on the next page. This chart stretches back in time only six generations, but the sixth generation still contains thirty-two ancestors, when all of them are known. There are an additional thirty ancestors in the second through the fifth generation, so even this small chart can contain as many as sixty-three ancestors, that is, yourself plus sixty-two others, if all of them are known. The chart on the next page of the first six generations of Ramona J. Sawyer's ancestors happens to contain no blanks, since all these ancestors are known, so it contains the full sixty-two ancestors. This is quite a large number of ancestors in just five generations, if we don't count our own generation. It is also quite unusual to know every last ancestor back to the sixth generation, even though this does not seem so long ago. The ancestor charts of most people, even after considerable research has been done, would normally contain at least several blanks for unknown ancestors. What is even more unusual about the Sawyer ancestors is that most of the next five generations are known as well, as can be seen in the many charts at the end of this chapter, which emphasize the very large number of ancestors we all have in just a small number of generations.



Six generations of the ancestors of Ramona J. Sawyer Barth, Julian and Simon Norwalk's great grandmother. Later in this chapter are many more charts showing additional generations of Thomas and Juanna's ancestors, and of others in their generation.

When one first learns about his or her more distant ancestors, attention is sometimes drawn to a more famous person, and this might have the effect of causing one to perhaps feel slightly superior to the

average person, who sadly probably does not have even one such illustrious ancestor. In fact, many people do have famous ancestors but simply don't know they have them. Sometimes people have been told they did have a famous ancestor, but they do not know how they are descended from that person or cannot prove they are descended from that person. So it is well to remember that if one is fortunate to know about an ancestor who lived as far back as say the year 1500, this would be perhaps the eighteenth generation back. This in turn means that in their same eighteenth generation, they had approximately *one hundred and thirty thousand other* ancestors, according to the table just below. This is because of the surprising way in which numbers increase exponentially, doubling in each generation as you go backwards in time into history. Thus, all of us are a mixture of not just a small number of other people, but of hundreds of other people in just the last few hundred years alone. As the preceding chart shows, in just five generations, most of us are a mixture of sixty-two other people.

Imagine that one of your ancestors was the King Charlemagne, who lived from 742 to 813 A.D. He would be back about as far as the forty-fifth generation of someone living today in the year 2001. If you simply double the number of ancestors in each succeeding generation, as in the table below, you would have approximately a trillion ancestors in your forty-first generation back, and another total of a trillion between you and that forty-first generation, or two trillion ancestors total. Thus, even if Charlemagne were your ancestor twenty-five times over, as would be likely because of extensive intermarriage between all the noble families in Europe throughout the Middle Ages, he would still only be a minuscule contributor to your total ancestry.

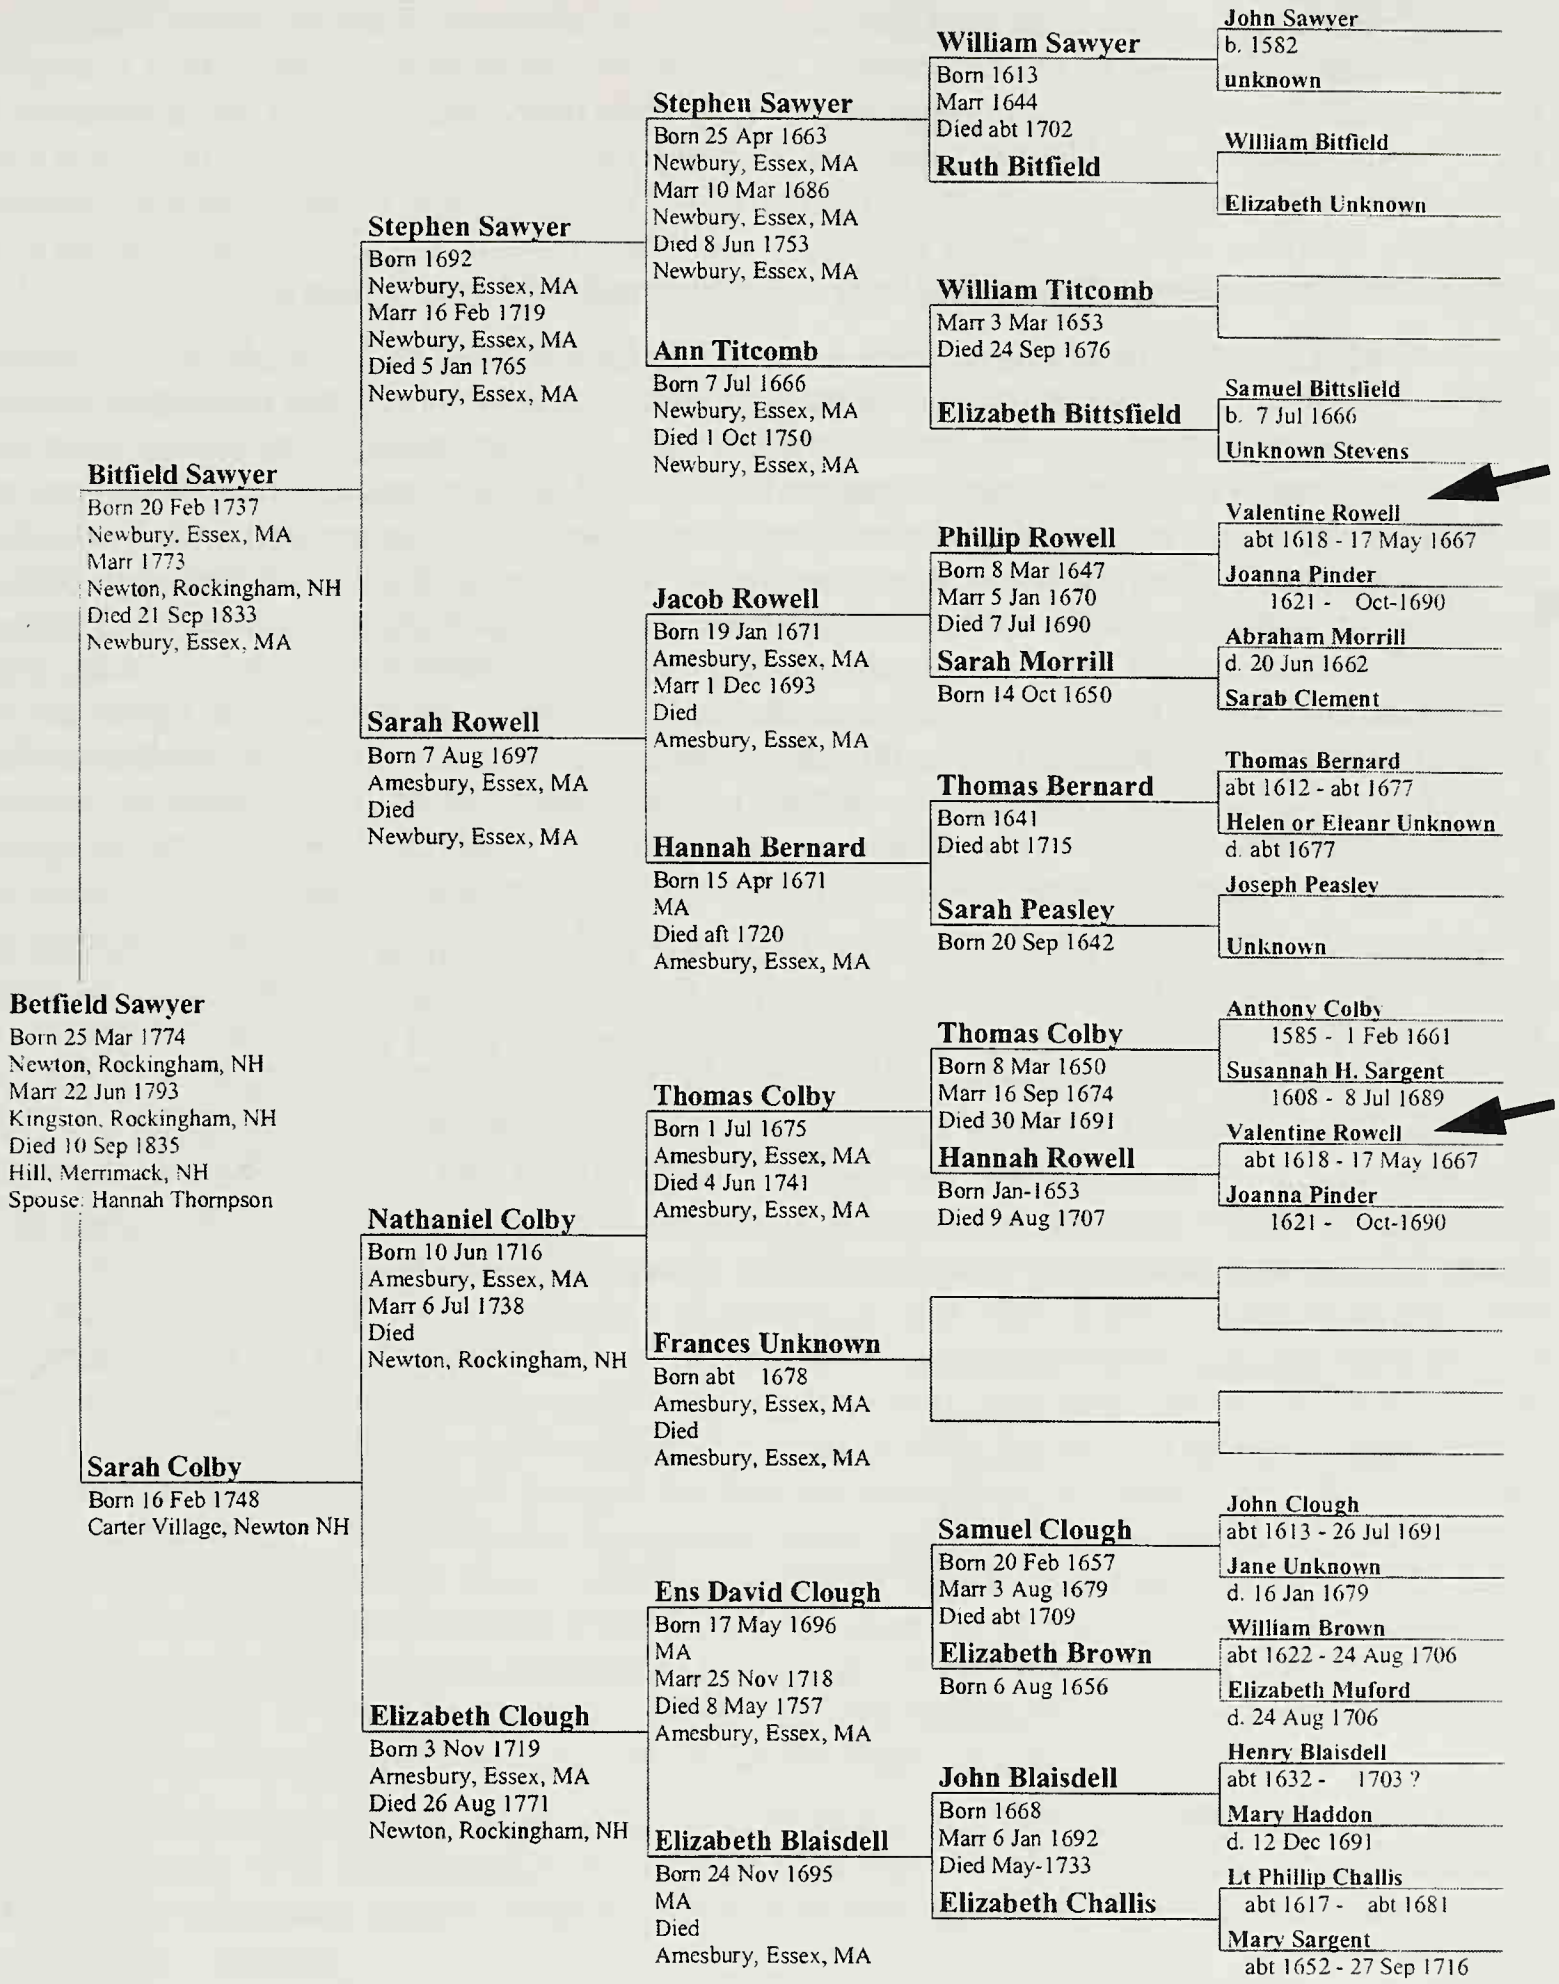
Converging Lines or Why None of Us Really Has a Trillion Ancestors

Of course the simple arithmetic above does not hold true in the real world for several reasons. Obviously, there are not a trillion people on the entire planet today, let alone twelve hundred years ago. The reason the pure logic of the geometric progression shown above fails is because of what genealogists call "converging lines." Basically this means that related descendants of the same couple often marry together, usually without knowing it, and each time this happens, it reduces the total number of ancestors by a large number. This can be seen most clearly if you imagine two first cousins marrying together. This is somewhat frowned upon in most Western cultures today, but it was not at all uncommon in many communities one hundred or more years ago. In the more usual case, the children of two *non*-first cousins who marry together will have four different grandparents and eight different great grandparents, just as shown in the simple numerical chart above. However, the children of two first cousins who marry together will still have four different grandparents, but two of these grandparents will be siblings, that is, brothers, sisters, or brother and sister. Therefore, the children of these two first cousins who marry together will *not* have eight different great grandparents but only six, because the parents of two of their grandparents are the same people. Therefore, the children of first cousins who marry together actually have twenty-five percent fewer ancestors, because some of their ancestors can be thought of as *duplicate* ancestors. This is not so complicated as it seems, but it is nevertheless hard for people to grasp at first.

An even easier case to understand, though far more rare in the real world, because it is universally frowned upon by all cultures, would be that of a brother and sister marrying together. Children of such a marriage would not have the normal four different grandparents, but only two different grandparents, since the parents of both their father and mother would be the same two people, thus these children would only have half the number of different ancestors as the vast majority of the population.

This is the simple explanation for what genealogists mean by "converging lines," which are caused by cousin marriages. In the real world, it is usually not quite so simple. A more typical case might be two sixth cousins marrying together unknowingly. Not unless a genealogist traced these ancestral lines back the full six generations would it be discovered that this couple had the same pair of great great great grandparents two times over, or that two different ancestral lines converged on the same couple back six generations. Typically many such instances occur in people's ancestries, but they are seldom recognized because most people never research their ancestry that fully. It would not be unusual to have several different cases of converging lines in one's ancestry in just the most recent twenty or thirty generations, since prior to the 20th Century, people did not move around very much so that most of the population in a particular community in one century was composed of descendants of people who had lived in the same community in the

century before that, and often in two or three centuries before that. Genealogists themselves are often surprised by this relative stability of communities, which appears to persist despite fairly major catastrophes such as the reoccurrence of the Plague in Europe in the Middle Ages, the last one being in the middle of the 17th Century, which kill off or dislocate a significant percentage of the population. The Plague was estimated to have reduced the entire population of Europe by as much as one third overall.



An example of converging lines in which Betfield's mother and father both have Valentine Rowell for an ancestor.

In modern times, it is more unusual for people to marry their first cousins, because people can easily move about and find partners who are not so closely related to themselves. However, even a short time ago this was not the case. People traveled only on foot or by horseback if they were rich, and in rural communities the numbers of available single partners was not great, so people tended to marry people in their own communities, many of whom were often their relatives. Although people usually tended to marry within their own religion, especially prior to this century, in many religions they would have been relatively free to marry outside their religion had they wished to. However, members of certain religious communities were discriminated against in certain countries at certain periods of history, and in such communities people would have found it almost impossible to marry outside their religion, even if they had wished. Still earlier in the Middle Ages and before, people moved about even less, civil records were not kept at all, and most people could not read or write, so knowledge of one's relatives was limited to people's memories. Therefore, marrying one's first cousin knowingly was much more common, and marrying one's more distant cousin unknowingly was probably extremely common, much more so than it is today.

The Sawyer ancestors have been very well researched in most cases by many people, not just by Roland D. Sawyer. Many of the best known families have multiple genealogies published about them, and many more have at least one good genealogy published about them. Therefore, since our knowledge about ancestors is more extensive, we would expect a greater likelihood of discovering some converging lines, especially in the closely knit early colonial communities from which the Sawyers are descended. Our extensive knowledge about families who married into the Sawyer family includes many famous early American surnames. For example, a partial listing of the best known names *besides Sawyer* among the ancestors of Roland D. Sawyer and his wife Mary Locke Palmer are: Austin, Batchelder, Blaisdell, Blake, Brown, Colby, Currier, Clough, Davis, Dow, Eastow, Fellows, Gove, Heath, Hobbs, Jenness, Locke, Moulton, Noyes, Osgood, Page, Palmer, Philbrick, Prescott, Rowell, Sanborn, Scribner, Silver, Thompson, Towle, Tuck, Tucker, Webster, and Worthen. Some of these names appear multiple times in the same generations of Roland and Mary Sawyer's ancestors, and can be traced back to the same couple in the early 1600's. This is the phenomenon discussed above, which genealogists call converging lines.

This phenomenon is one of those obvious things that most of us never think about. We take it for granted that in each farther back generation we will all have the same number of additional ancestors. As seen below, there are many examples of converging lines in Roland and Mary Sawyer's ancestry. The ancestors shown in the right-most columns are descended from a common ancestor shown to the left. Thus, in the top line either Roland Sawyer or Mary Palmer had both Prudence and Thomas Marston as ancestors, who were brother and sister, and thus had the same father, William, and therefore identical ancestries, as all siblings have. This came about because a descendant of each married together. For simplicity and clarity, only the male parent is shown in the left-most column of the chart below.

Knowledge of Our Sawyer Ancestry is Unusually Extensive

What seems especially noteworthy about the Sawyer ancestors is *not* just that Roland D. Sawyer traced his family name back to 1600, but rather it is two unusual facts coming together to produce an unusually broad and complete genealogical record. The first is that the Sawyer ancestors of New England almost all lived for as long as two centuries in a relatively tight community, since arriving in America in the early 1600's. Furthermore, these ancestors entered this community exclusively, so far as we know, from England. Although there may have been a few people descended from immigrants from other European countries living in these early communities, not a single person of non-English ancestry is found among Ramona Sawyer's ancestors. Secondly, England is itself unusual in that it had adopted a system of keeping town records of births, marriages, and deaths sometime in the 1300's to 1400's, which was much earlier than other European countries. Thus, the towns of Hampton, Kensington, Newbury, Salisbury, Amesbury, and others, maintained the same municipal practices that their founders had known in England and began keeping records almost from day one. This has made it easier to retrieve an unusually large amount of information not just about the Sawyers, whom Roland D. Sawyer researched so well, but in fact a great percentage of all of Thomas Sawyer and Juanna Scribner's ancestors back to the seventeenth century, and in some cases, to even the sixteenth century. This includes the ancestors of all those who married into the Sawyer family generation after generation, and thus became themselves ancestors of succeeding generations of William Sawyer's descendants. The completeness of the overall genealogical records available for early New England is unusual. Similarly, extensive records probably do not exist for most communities in America, and probably not for most places in Europe either.

The completeness of the records available make it possible to establish not only William Sawyer as an ancestor, but also a great many other ancestors of William Sawyer's approximate generation. The table below illustrates this by listing 106 ancestors of Roland D. and Mary Sawyer living in around 1600. Perhaps only about half of those listed in the following table would be ancestors of all the descendants of Thomas and Juanna Sawyer, the other half being ancestors only of a large part of the Calvin Sawyer branch. However, it is likely that a similarly large list could be made for many in the other seven branches of the Thomas Sawyer family, since many of the first two generations of Thomas and Juanna's descendants married into other well-known early American families such as Clay, Littlefield, Woodman, and so on. It must be emphasized that these converging lines and surnames mentioned above are all in the ancestry of Roland D. Sawyer, but only *some* are in the ancestry of all Sawyer descendants mentioned in this book. I have mentioned them in detail only because they are doubtless typical of most of the Sawyers born before the start of this present century. They emphasize that the Sawyer descendants mentioned in this book have many early American ancestors, not just William Sawyer.

Below is a list of one hundred and six ancestors of Roland D. Sawyer born in the early 1600's. Some of these are ancestors of all Sawyers listed in this book. Most Sawyer descendants listed in this book could probably discover a similar number of their own ancestors from the earliest days of American settlement.

Another illustration of the same phenomenon concerns the stone monument erected in Newbury to commemorate Newbury's founders. A bronze plaque on the monument lists the seventy people below who were either founders or very early residents. Of these seventy at least nine were Sawyer ancestors.

To be able to know as much about one family and all its ancestors over approximately four centuries as we are able to know about the Sawyer family is very unusual. It is possible because of peculiar historical factors, some of which have been mentioned above, and because of the discovery and evolution of many

new tools applicable to this work, which are far better than Roland D. Sawyer had prior to 1928. Some of these are the computer, the telephone, the fax machine, and CD disks, to mention only a few. We have much broader, easier, and quicker access to information than Roland D. Sawyer had. Earlier generations of genealogists often worked from handwritten genealogies, not even printed.

According to the arithmetic of human genetics discussed above, the theoretical number of ancestors just in the eleven generations shown in this book is over two thousand, if we ignore any converging lines. For example, if we consider this writer's mother-in-law, Vanessa Barth, and say that she is in the first or "present" generation, and then count backwards by generations . . .

Vanessa Barth	1st gen	1 person
Ramona	2nd	2 people
Roland D.	3rd	4 people
Stephen	4th	8
Calvin	5th	16
Thomas	6th	32
Betfield	7th	64
Bittfield	8th	128
Stephen	9th	256
Stephen	10th	512
William	11th	1024 people

. . . then we find that Vanessa has 1024 ancestors in her eleventh generation back, assuming no converging lines. Even though this arithmetic seems simple enough, it is worthwhile translating this into even simpler English. About one thousand people living less than four hundred years ago in about 1600 had a direct genetic effect on Vanessa Barth, and of course the same is true for all of us. Of this 1024 of Vanessa's ancestors who were alive in about 1625, 512 or half are the ancestors of Vanessa's mother, Ramona Sawyer Barth, and of these we know the identities of about 106, or nearly twenty-one percent of all Ramona's ancestors in her tenth generation.

In Vanessa's eighth generation back, Bittfield's generation, there are 128 ancestors total, of which half, 64 are Ramona's, and of these 38 or sixty percent are known. In many cases,quite a lot is known, not just dates of birth, marriage, and death. In Vanessa's seventh generation back, Betfield's, there are 64 ancestors total, of which 32 are Ramona's, all of whom are known. The numbers of known ancestors given above could very likely be increased by further research, as additional information should be fairly readily available on some of the present gaps in our knowledge of Sawyer family ancestry.

Some people's interest in ancestry is primarily focused on tracing down one particular name to the dawn of history. Many of Ramona Sawyer Barth's ancestors can be accurately traced back to the 1300's and 1200's, and even to the 1100's in a few cases. But this does not seem especially interesting to me. Everyone has an illustrious ancestor someplace, if they just could trace backwards far enough. But you can see from the numbers above that if that ancestor were back in your twentieth generation, let alone in your thirtieth generation, he or she would only be one among a truly gigantic number of genetic contributors, so his or her contribution to you would be proportionally small. It seems more interesting to know as much as possible about one's entire ancestry, and in this respect Ramona and most of the Sawyer family are very fortunate. It is worth noting, as an example, for the sake of comparison, that on Vanessa's father's side, we had as of 1994 been unable to learn of any ancestors beyond her fourth generation back, and in the fourth generation, not all her ancestors were known. This is probably about average for most people. Most people know their grandparents, and often their great grandparents as well. But surprisingly few seem to know anything at all beyond. Sadly, when this information is lost, a vast amount of potential information about one's living relatives is also lost. By this edition in 2001, we have succeeded in learning about several more generations of Barths so that we now know of one person born in about 1725, compared to knowing one hundred and six ancestors a hundred years earlier for the Sawyer family.

In discussing converging lines above we showed examples of people who may have had only six different great grandparents, instead of the "usual" eight, and who therefore had only fifty-six different ancestors in their first five generations, instead of sixty two, because six people in these five generations were "duplicates." We showed a six generation chart for Betfield Sawyer in which Valentine Rowell and his wife were his great great great grandparents twice over. From this you can see that he had two duplicate pairs in his sixth generation, but also that he would have four duplicate pairs in his seventh generation. If we were able to show ten-generation charts in this book without the print becoming too tiny to read, it could be seen that all the succeeding generations would also be duplicates, and the total number of duplicate ancestors would increase very rapidly, until perhaps other converging lines were encountered.

DNA study traces common European ancestor

● Four out of five men share a common male ancestor who arrived in the region about 40,000 years ago.

The Associated Press

WASHINGTON — About 80 percent of Europeans arose from primitive hunters who arrived about 40,000 years ago, endured the long Ice Age and then expanded rapidly to dominate the continent, a new study shows.

Researchers analyzing the Y chromosome taken from 1,007 men from 25 locations in Europe found a pattern that suggests four out of five of the men shared a common male ancestor about 40,000 years ago.

Peter A. Underhill, a senior researcher at the Stanford Genome Technology Center in Palo Alto, Calif., and coauthor of the study, said the research supports conclusions from archaeological, linguistic and other DNA evidence about the settlement of Europe by ancient peoples.

"When we can get different lines of evidence that tell the same story, then we feel we are telling the true history of the species," Underhill said.

The study, which involved more than a dozen researchers from Stanford and Europe, appears today in the journal Science.

Underhill said researchers looking at the 1,007 chromosome samples from Europe identified 22 specific markers that formed a specific pattern of change.

He said the researchers found that about 80 percent of all European males shared a single pattern, suggesting they had a common ancestor thousands of generations ago.

The basic pattern had some changes that apparently developed among people who once shared a common ancestor and then were isolated for many generations, Underhill said.

This scenario, he said, supports other studies about the Paleolithic European groups.

Latest genetic knowledge proves *many* converging lines must have existed for so many to have a common ancestor for so long.

Just in the last ten years, science has started to make it possible to take this reasoning yet one step further. With the mapping of the human genome, which was completed while the research for this book was in progress, geneticists have greatly improved their ability to recognize similarities and differences between the genetic makeup of different people. Thus, as the article above explains, a recent study of a

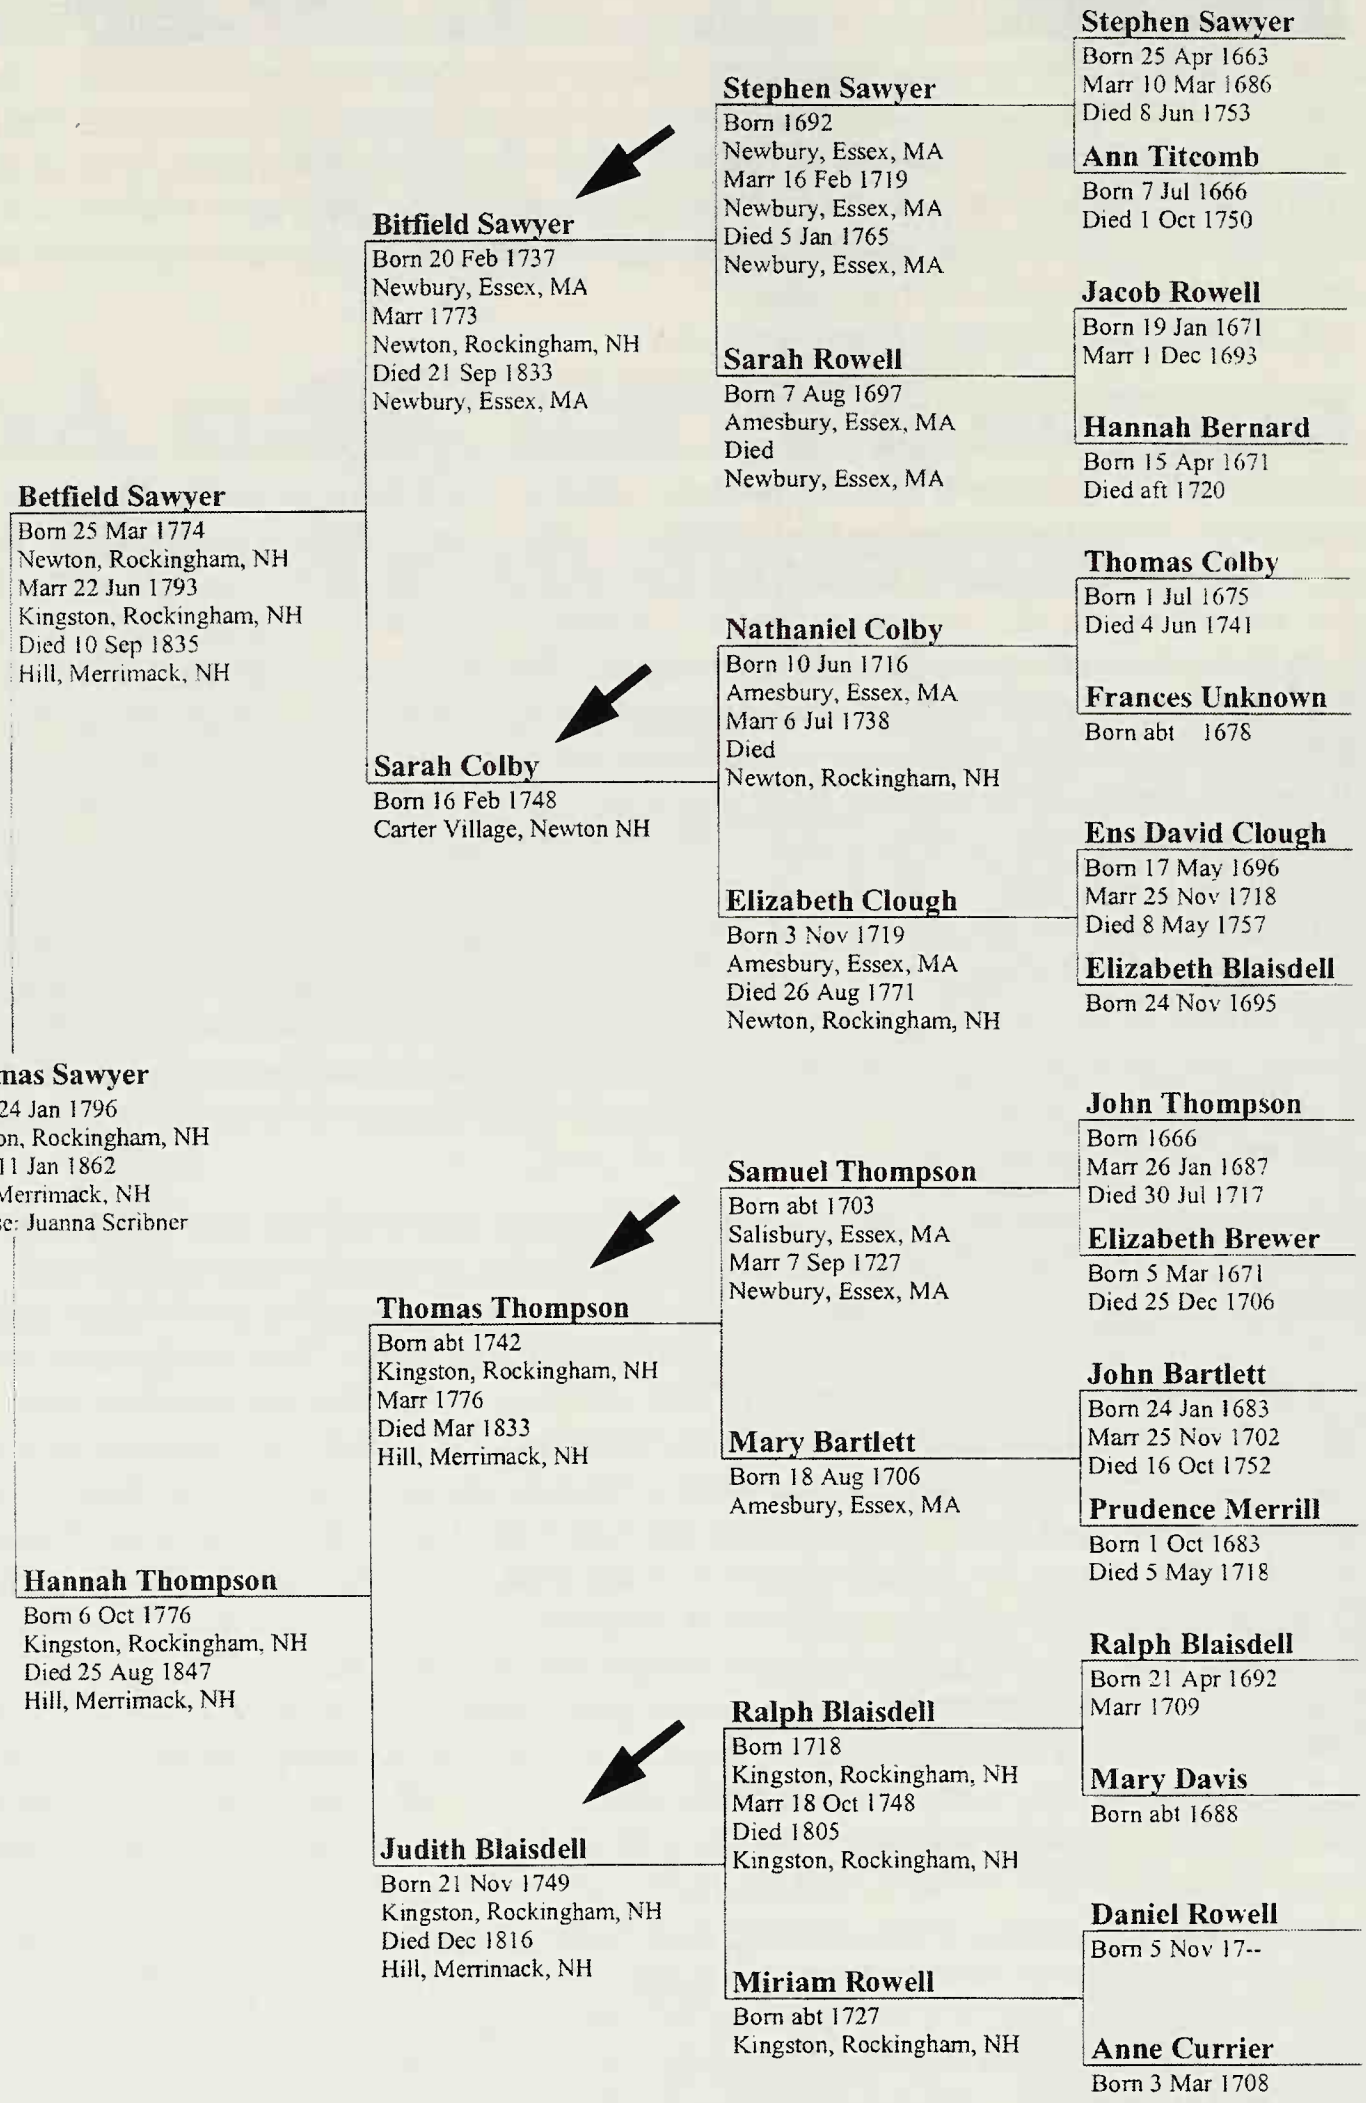
sample of one thousand European men showed that four out of five of them were descended from the same one individual 40,000 years ago. In the light of what we have been discussing above, this is an amazing discovery, because it means that an extremely large number of cousin marriages must have occurred long ago for this to be true. If we imagine a stone age tribe of slightly superior people coming to Europe 40,000 years ago, perhaps lead by some unusual patriarchal leader, who had many children, most of whom happened to survive, it makes sense. The community would probably have been quite small at first and perhaps also quite isolated from other preexisting indigenous communities. From the original children of the one leader with many children, many cousin marriages would likely have followed, and so perhaps after one hundred generations of relative isolation, many people in the original community would still have the original leader for one of their ancestors.

Summary of the Sawyer Ancestry Report

Chapter 3 of this book is a report of all of Ramona J. Sawyer's known ancestors in a textual format that genealogists call by its German name, *Ahnentafel*, which in English means literally "ancestor table." The convention or "system" used in this type of report is to assign a number to each person such that any person's father can be found by doubling that person's number, and his or her mother by doubling the number and adding one. For several reasons, this Ahnentafel system is far from ideal for presenting large numbers of ancestors stretching back many generations. The system probably came into use centuries ago, when the number of known ancestors was usually smaller. As the number of ancestors becomes greater, the numbers assigned to each generation of ancestors also gets rapidly larger, as is always true when exponential growth occurs, and it becomes increasingly confusing to double these large numbers in one's head. Even with just the fifteen generations in Chapter 3, the numbers already reach five digits. It is not uncommon for genealogists to want to construct ancestor reports stretching back beyond thirty generations. However, using this system, the numbers assigned to individual ancestors in the thirty-second generation already exceed two billion. Not only are these large numbers unbearably cumbersome to work with, but they actually exceed the calculating ability of the present generation of Intel processor-based desktop computers. The plain fact is that no system is ideal for simplifying the complexity that can arise when many generations of a person's ancestry are known, and there is presently no perfect way to put all of this complex data into a book.

In the case of this book, we were only able to trace some ancestors back to the 15th century, which is approximately when towns in England started keeping regular, systematic records of the births, marriages, and deaths of ordinary people. By comparison, records for the much smaller "noble" class extend far back into European history, sometimes even to the 9th century and earlier. This was because economic and political power was based on the ownership of land and property, and this was passed on from one generation to the next through marriage and inheritance. Therefore, it was vital to all members of the noble class to keep exact records of their family connections, even quite distant ones. However, though there were no nobles found among the known ancestors of the families in this book, 1450 is still farther back in time than many such studies can go due to lack of records of any kind, and as the reader will note in Chapter 3, we have succeeded in tracing a very large number of ancestors back at least into the 17th Century. Despite our overall success in this book, the reader might wonder why so many lines could not be traced all the way back to say 1600. There are several basic reasons, most commonly that the surviving early records in a particular time and place were incomplete or insufficient to resolve ambiguity between individuals with the same or similar names. Sometimes records simply did not exist at all or did not survive. Sometimes records may in fact exist, but researching them would have involved more time than was available during the preparation of this book. While we have been unusually fortunate in compiling the relatively complete family record contained within these pages, keeping track of this family's growth in the future will probably be exceedingly difficult despite the existence of so many new research tools mentioned previously. Towards the end of this century, rapid transportation has become so universally available that not only have many families spread out across the country, but it has become commonplace for families to move from one part of the country to another several times in the course of one generation, making the maintenance of genealogies increasingly difficult.

The nineteen charts which follow extend for another four and five generations in diagramatic form the ancestry begun in the chart on page 24 and emphasize that relatively few lines are missing.



Five generations of ancestors of Thomas Sawyer. Next four charts are of Thomas' grandparents, extending two more generations.

Chapter 3

The Ancestry of Ramona Jeanette Sawyer

The six people at the beginning of this chapter who are numbered 1 are brothers and sisters who share the same ancestry. The format of this chapter is known to genealogists by its German name, *Ahnentafel,* which means simply ancestor table. People are numbered so that you can find the father of any person by doubling his or her number, and the mother of any person by doubling the number and adding one.

11. **Mary Elizabeth Moulton** b. 3 Oct 1806, Gilmanton NH, d. 8 Apr 1882.

12. **Jonathan Palmer** b. 20 Feb 1800, Kensington, NH, m. 31 Dec 1826, **Abigail Locke Jenness**, b. 3 Apr 1801, Rye, Rockingham, NH, d. Apr-1847, Kensington, NH. Jonathan died 8 Aug 1881, Kensington, NH.

13. **Abigail Locke Jenness** b. 3 Apr 1801, Rye, Rockingham, NH, d. Apr 1847, Kensington, NH. Some experts confused about death date. 1867? But Jonathan is in the 1850 Census in Kensington living with second wife Sarah and two children, so 1847 seems more likely. John C. Palmer, family historian for Palmer agrees.

14. **Charles Wallace Brown** b. 27 Mar 1831, Kensington, NH, m. 10 Jan 1852, in Kensington, NH, **Mary Nichols Palmer**, b. 2 Feb 1829, Kensington, NH, d. 19 May 1900, Kensington, NH. Charles died 30 Jun 1852, Kensington, NH.

Great Great Grandparents

16. **Thomas Sawyer** b. 24 Jan 1796, Newton, Rockingham, NH, m. **Juanna Scribner**, b. 5 Aug 1800, d. 11 Feb 1875, Manchester, Hillsboro, NH, buried: East Andover, Merrimack, NH. Thomas died 11 Jan 1862, Hill, Merrimack, NH, buried: East Andover Cemetery, NH.

17. **Juanna Scribner** b. 5 Aug 1800, d. 11 Feb 1875, Manchester, Hillsboro, NH, buried: East Andover, Merrimack, NH. RDS put Juanna's birth in 1798. However, Shirley (Winroth) Danahy told Howard Gant the above birth date, and Shirley has seen her birth certificate. As a matter of fact, the absence of the names of any parents on this certificate has caused several people to be uncertain of Juanna's exact ancestry, though her name definitely appears in Ebenezer Scribner's will in several places. Juanna's death at Manchester is assumed, since she lived the last years of her life with her son Orrin, who lived in Manchester.

18. **Stephen Currier** b. 4 Apr 1781, West Amesbury, Essex, MA, m. 22 Mar 1804, in Amesbury, Essex, MA, **Anna Dow**, b. 18 Feb 1776, Plaistow, Rockingham, NH, d. 23 Feb 1858, Plaistow, Rockingham, NH. Stephen died 7 Jan 1856, Plaistow, Rockingham, NH.

Kingston, Rockingham, NH, d. 22 Sep 1801, Henniker, NH. Ezra died 22 Oct 1807, Henniker, NH. Probably married twice, first Lydia, second Hepzibeth. Probably fathered nineteen children total between two marriages. Extensive records exist for this family in Salisbury and Kingston. However, the first marriage has not yet been found, nor the parents of the first wife, nor her death. It is also possible there were two Ezra Tuckers in the same generation with different parents, though there is no evidence of this at all in the records searched by two authors.

137. **Hannah Welch** b. 1680, Ipswich, MA.

138. **Ebenezer Webster** b. 1 Aug 1667, Hampton, Rockingham, NH, m. 25 Jul 1709, **Hannah Judkins**, b. 13 Nov 1686, Boston, Suffolk, MA. Ebenezer died 1 Feb 1736, Kingston, Rockingham, NH. Settled in Kingston, NH in 1700.

139. **Hannah Judkins** b. 13 Nov 1686, Boston, Suffolk, MA. Birth date of Nov 13, 1676 given by some authorities with a question mark. It is too early for the birth dates of her nine children, the youngest of which was born 1728. This would mean she had most of her children in her 40s and the last when age fifty-one. While biologically possible, it does not seem likely. Therefore, I have arbitrarily updated Hannah's birth date by ten years. This makes it more reasonable in relation to other known dates.

140. **Ezra Tucker, Sr.** b. 17 Mar 1706, Salisbury, Merrimack, NH, m. 24 Jan 1727, in Amesbury, Essex, MA, **Beersheba Sargent**, b. Amesbury, Essex, MA, d. Amesbury, Essex, MA. Ezra died Amesbury, Essex, MA.

7th Great Grandparents

512. **William Sawyer** b. 1613, England, m. 1644, **Ruth Bitfield**. William died about 1702, Newbury, Essex, MA. Though earlier writers have said William came from John of Lincolnshire, Eleanor Sawyer who will publish a major genealogy in 1994, went to Lincolnshire and searched 16th century records carefully and could find no verification. More recently, some evidence points to Sir Edmund Sawyer b 1519 in Berkshire, England, who bought a manor in Berkshire in 1537, d 1570, and whose eldest son John (of Berkshire) had three sons Thomas, Edward, and William (eldest) born in Lincolnshire. As Eleanor says, this sounds promising.

He married his second wife, Widow Christian Weare, on 2 Mar 1623. Stephen's second wife apparently died very soon after they were married. He then married his third wife in England, Widow Helena Mason, m. 26 Mar 1627, before leaving for America. Helena Mason b. about 1583, d. before 3 May 1647. Some authors have used spelling of Batchelder for this man, which is a common variant seen, and even used by some of his descendants. However, he himself seems to have used Bachilor.

Chapter 4

Collected Sawyer Family Writings by Roland D. Sawyer

Betfield Sawyer of Hill

Betfield Sawyer was a descendant of William Sawyer of Newbury, Mass., one of the sixty-seven original settlers of that town. William Sawyer settled in the Upper Woods, now West Newbury. He arrived there in 1644, having been in Salem in 1642 and Rowley in 1643. He had twelve children, some of whom are buried in the Sawyer Hill cemetery, now the Moses estate.

The youngest son, Stephen, became a Quaker; he lived in the West parish in the Turkey Hill district, and married Ann Bittsfield-Titcomb, from whom the later "given-name" found in the family, and variously spelled, Beetfield, Betfield, Bitfield, etc. Stephen gave land for the Quaker meeting house, which was taken down in 1920. A grandson of Stephen by name of Bitfield, married Sarah Colby, a daughter of Nathaniel Colby in Newton, N.H., and thus were linked together two old-time pioneer families, for Sarah Colby was a great granddaughter of Anthony Colby, who in 1655 bought from Goodman Macy, the Macy-Colby house in Amesbury, from which Macy had been driven in 1654 because of his harboring a Quaker, an event immortalized in Wittier's poem, "The Exiles."

Thus, back of Betfield Sawyer lay four generations of men accustomed to wrestle with the harsh nature of New England for a living. He and the generations of men and women that settled upper New Hampshire were the survival of the fit – weaklings died off, only those able to withstand hardship lived – and of such were the hardy men and women who left the coast and located in the town of Hill and other like towns.

The study of ancestry is not a mere fad; it is a labor of love and gratitude. How much we owe those rugged men and women, and how little we know about them. Only to a few who carefully gather up the few facts that can be obtained, do their names mean more than the names of their patriarchs in the chronology in the early chapters in Genesis, "they were born, married, begat children, died." We have been in America only ten generations at the most, and yet already we forget the brave men and women, who by their struggles and sacrifices, made America possible. It is therefore not alone a matter of filial respect, but of common gratitude and decency, that we recover, so far as we can, the story of our ancestry. And of this rest assured that once well started, the study of family history no longer remains a dry subject; but has sufficient of scientific research to hold one's interest. And as one studies the life of his forebears and sees how their influence comes down to himself, the study of family history can grow into a thrilling pursuit.

Peace between French and English was made in 1763, and upper New Hampshire was opened to settlers. In 1765, we find three white men on the Bristol side of Hill: Capt. Cutting Favor, Carr Huse, and John Tolford, Jr. They returned south, but in 1767 Favor and Huse made permanent settlement. By 1773 there were thirty-seven male land-owners, a grist-mill, and a saw-mill in the settlement. In 1776, they petitioned for incorporation, and in 1778 became a town under the name of New Chester. New Chester was one of the mother towns; Bristol, Bridgewater, and parts of Wilmot and Danbury came from the old town. In 1819 the town was renamed after Gov. Isaac Hill. Thus, the town was in its prosperity when Betfield Sawyer was the village shoe-maker, and the names in the old account book, are the daughter-towns as well. They were the men who felled the trees, burned their trunks, planted rye, raised turnips, and reared a civilization in the wilderness. Betfield Sawyer was born in Newton, N.H., March 25, 1774. June 17, 1793, he married Hannah Thompson, in that town. Hannah Thompson was from Kingston, where her family were neighbors with the family of Ebenezer Webster, the ancestor of Daniel Webster.

[There are many references in Roland D Sawyer's writing such as the one above to a family connection between Sawyers and the family of the statesman Daniel Webster b. 1782. Ebenezer Webster b. 1667, son of Thomas, settled in Kingston in 1700, and had nine children all born there. Ebenezer (1st) died there in 1736, so undoubtedly some of his descendants were still there fifty years later when Hannah Thompson was born in 1776, though probably not the line of Daniel Webster. RDS was a knowledgeable genealogist,

and thus he probably knew the exact Daniel Webster connection. However, admiring Daniel as he did, he seems to have liked to "obscure" the exact details. He did this to the extent that some of his children were convinced Daniel Webster was a direct ancestor of the Sawyers. But this was not so. The facts are that the Ebenezer (1st) above of Kingston had a daughter Hannah Webster, born 1721 in Kingston, who married Samuel Scribner and became Juanna Scribner Sawyer's grandmother. The same Ebenezer (1st) had a son Ebenezer (2nd) b. 1714, who was Hannah's brother, and he in turn also had a son Ebenezer (3rd) b. 1739. This last Ebenezer (3rd) was known as Captain Ebenezer Webster, and he was a first cousin of Juanna's father, Ebenezer Scribner. It was this same Capt. Ebenezer Webster who married (second) Abigail Eastman and became the father of Daniel Webster and nine others. Thus, Juanna Scribner Sawyer was a second cousin of Daniel Webster. To belabor the point, as RDS does a little, that Betfield's wife was from Kingston where the Webster ancestors settled three quarters of a century earlier, and that Betfield himself came from Newton, which was only a few miles from Kingston, and that some of them eventually ended up being neighbors one hundred years later, and fifty miles or so to the north is mostly Monday-morning-quarter-backing. It is true, however, to say that Daniel Webster was born and raised in Salisbury only about six miles, according to RDS, from where his second cousin Juanna Sawyer settled when Daniel was about fifteen. J.N.]

On May 24, 1792, Betfield's grandfather (Nathaniel Colby) had deeded to him the Colby home in the Carter Village, and to that home the groom, aged nineteen years, took his bride. There a year later was born their first son, David Colby Sawyer, and later another son Thomas, and two girls, Polly and Hannah, the former of whom died when a few months of age. Betfield Sawyer sold his Newton home to Benjamin Hoyt in December 1799 for $350. [elsewhere, see below, RDS states the proceeds from this sale were $270. J.N.], and with his worldly effects loaded on an ox-sled, the little family moved up to Hill, or New Chester as it was then called.

On the back of the ox-sled Betfield had built a wicky-up to shelter his family during the journey. Little David, five years of age, spurned the wicky-up. He insisted in riding outside with his father. There was only one incident which occurred on the way. Little five-year-old David disappeared. His father thought he had gone into the wicky-up, but when he stopped the oxen for a breathing spell, he found this was not so. Little David was not there. Telling his wife, Betfield started back on foot to find David. In telling the incident a great many times in later years, he said he must have gone back at least four miles before he spied "the little shaver" stubbing along in the ox track, as bravely and unconcerned as though it were a common occurrence. He declared he was not tired and walked on his own feet to join the sled. [This incident is sometimes ascribed to Thomas instead of David, so I have gone to some trouble to check it, and RDS definitely tells it of David. J.N.]

Family tradition says Betfield Sawyer moved to Hill in 1797; though the date of the sale of his house at Newton would indicate 1799. At any rate, it was in the middle of a New Hampshire winter that the young father and mother and their two boys, (and perhaps infant girl), climbed over Tucker Mountain to rear their temporary log cabin for the winter. That first home was well up the side of Ragged Mountain, but when spring came the pioneer came back a little and built his permanent home on the site, where now [in 1930?] is but a cellar-hole and a few rotting beams.

Before me as I write is the account book of Betfield Sawyer, New Chester, 1815. On the index pages are the names of the eighty-five men and women, with whom he, as the town shoe-maker, carried on his accounts. Among the names are Webster, Stevens, Bailey, Sargent, Forbes, Thompson, Sanborn, Wells, Searl, Mann, Quimby, Ray, Rowell, Ladd, Joslyn, Colby, Dearborn, Norris, Babcock, Hoyt, Lovering, Hunkings, Weare, Eastman, Wadleigh, Smith, Dow, White, Davis, Huntoon, Blanchard, Rand, Tyler, etc. All are the Anglo-Saxon names of that sturdy band of pioneers who went up into New Hampshire and planted there the civilization that became the greatness of America. Among those who came out the six miles to have shoes and boots made and mended was the family of Daniel Webster, and they paid part in cash and part in the product of their farm; also the Scribners, from whom came the founder of the Scribner's magazine. There are four "captains," several "lieutenants" among the men. As one reads the

pages of this book, his heart grows that it is the account of one of his forebears – here indeed we find that "Rugged peasantry, a country's pride – which once destroyed, can never be supplied."

Betfield Sawyer had three boys. David, Luther, and Thomas, and as they grew, the family income was added to by their labor, and we find noted where one or other of them labored from dawn till dark with the yoke of oxen and received one dollar. Fifty cents was the pay for the day's labor at wood-chopping, hoeing, planting, etc. Pay for daily labor was regulated by a town vote. From breakfast to dark it was 50 cents a day for a yoke of oxen, and the same for a man.

[Betfield's account book provides us interesting insight into the economy of the time.] If Betfield sent out David and Thomas each with a yoke of oxen he got a return of $2.00; and if one had took two yoke he received $2.50; and if he made a pair of shoes besides his other work, he got 50 or 75 cents more. Betfield sold Major Burley Smith a turkey for 50 cents; 100 bricks for 40 cents; charged Smith 35 cents for taking his horse to drive to Grafton and back – total $1.25. Smith squared the account by one half bushel of wheat on April 26, 1814, for $1.25.

Lieut. Enoch Merrill sold Betfield a tanned hide for his shoe making, $2.20; a sheep skin for 25 cents; a side of upper leather, tanned, for $4.00. Betfield paid by hauling him a load of hay, 1200 lbs. at 50 cents per hundred and 40 cents for the hauling with his oxen. The prices Betfield got for his shoes is interesting, they run as follows: small shoes for boys, 34 cents; heavy shoes for women, 50 cents; man's calf skin shoes 67 cents; man's cowhide boots, $1.50. Repairing shoes was generally 17 cents (a shilling). He bought untanned hides at 25 cents a pound. Some boots were made for $1.34.

The old form of reckoning money was used for small amounts, "ninepence" was 12 1/2 cents or actually 13 cents; 6 "shillings" were equal to a dollar, or one to 17 cents, and a very frequent sum was two shillings, or 34 cents. When David was 19 and Luther was 14, their father let them out a good deal at 83 cents a day for both. After David was over 20 he got full pay, 50 cents a day. After he was 21 he made the deals himself. Betfield let his horse a great deal. Evidently he was a good driving horse. Jonathan Hunkins hired him to take milk to Andover, 14 cents; in return Betfield paid Jonathan 14 cents for his big wagon to go to the mill.

Luther plowed for Moses Colby for two days with two yoke of steers for $2.26. Moses paid back by shoveling dung at 50 cents a day. The big item of exchange was a Spanish milled silver dollar. Betfield went in for some luxuries after 1820. He bought a table and six chairs from James Bailey for $6.25. He paid Captain Phinias Sargent $3.50 for the use of his two seated wagon to take his family to Salisbury Beach; he also paid $2.00 for the use of a chaise to Portsmouth and back. The chaise was a mark of wealth in those days, and it paid a $2.00 excise tax, as an automobile does today. He hired it from Captain Sargent.

Cheese he bought by the whole cheese at 10 cents a pound. Miles Cole was the blacksmith, and accounts with him take the most space in the book. Cole ironed a steer yoke for 33 cents; shod the fore feet of a yoke of oxen for 50 cents. Another blacksmith was Captain Joe Gail; he evidently did finer work. He put a mainspring into a gunlock for 30 cents; sharpened a plow point for 50 cents; made whiffle tree iron for a shilling, etc. The old account book lifts the iron curtain that hides the past, and lets us see life as it was in the country above Concord one hundred and fifty years ago.

Betfield Sawyer cleared the land, raised his stock, and provided for the four more children born to him there (Luther, Polly, Calvin, Betsy). New Chester voted in 1797 to pay an able-bodied man 50 cents a day, and 50 cents a day for a yoke of cattle. Only from a few days work for the town and for neighbors did the pioneer at first receive any money; but as the boys grew and were able to do farm-work, more and more he fell back upon the trade of making boots, which he had learned in Newton. The Colby property had brought $270 for the buildings and twenty-two acres – this was the fortune upon which Sawyer went forth to buy and build anew. What hardihood was in the breasts of that pilgrim couple – building a new home, with nothing but their naked hands and hampered by five little ones, and they under thirty years of age.

Betfield Sawyer was a methodical man, and a good writer, though all the literary remains that come down to us are the family Bible and the account-book before me. Money was a scarce article. Work was

paid for in barter, and larger transactions were carried on by means of notes. How little we know about the lives of our ancestors. We may have faint recollections of grandparents and traditions of great grandparents, but back of that we can only reconstruct their lives by a knowledge of the lives of the people of their day. Those generations that made possible the life of today, seem almost as far away from us as the lives of the Hebrew patriarchs of the Old Testament. They lived, made their sacrifices for us, and died. It would seem that decent gratitude demands that we save their memories whenever and wherever we can; town histories and family records are a duty; we should recover all we can of the lives of our forbears.

Betfield Sawyer like the rest of the pioneers, swung the ax in the lonesome forests; his oxen snaked the great trunks into a pile and they were burned; then on the virgin soil, refreshed by ashes, the pilgrim planted his rye and turnips, his major crops. It was a hard and simple life, but a wholesome life, for out of it came America.

Betfield Sawyer died September 10, 1835, aged sixty-one years, five months, sixteen days. His wife Hannah died August 25, 1847, aged seventy-one years. Their bodies were laid side by side in the little family cemetery, where I copied the records in 1909, but which last summer I could not find among the pines in the brief time at my disposal.

Of the eight children of Betfield Sawyer, four died in childhood, and four lived to maturity in the town of Hill. One, Polly, died in infancy, Betsy died at three, Hannah at four, and Calvin lived to six according to one record, to eight according to another. The four little graves beneath the pines tell the story of the tragedy of the large family and hard conditions of living in early New England. Birth control would have been a blessing to the women of colonial New England.

David Colby Sawyer, oldest of the children who grew to maturity, was born in Newton, in 1794. He was happily married to Mary E. _____, until scarlet fever took away their two children, little Mary dying Dec. 30, 1832, and little Luther on Jan. 5, 1833. The former was three years and seven months of age; the latter was one year and two months. David Sawyer was a large man, clean shaven, and of intellectual appearance; though uneducated beyond an ordinary schooling of his day, he was a man of considerable thoughtfulness. Following the tragic death of his children, he refused to longer cohabit with his wife, saying (much after the teaching of Tolstoy seventy years later) "what is the use to bring children into the world to suffer and die." He and his wife finally separated and David lived alone at a place called Poverty Pond, where he ran a saw-mill. He later lived near Hill village. In the eighteen fifties, David Sawyer became sort of a Universalist preacher, and the two of his sermons which came down to me show good reasoning and a quite good literary style. He died in Manchester at the home of his nephew, Weare Sawyer. The crude verses on the old gravestones were also his work.

All three of the sons of Betfield were very robust and strong men, David being tall and large, Thomas and Luther thick-set with strong shoulders. As a lad, Luther was the stronger of the two, and Thomas used to say if he had not been injured, he would have been the strongest man in the state. Luther Sawyer, while mowing in a hot meadow with a gang of men, joined in a race to a certain fallen tree; he was the first to reach it; springing upon it and calling Come on boys, he jumped down to the other side; something gave way – he was taken home and put to bed. The doctors said the caul of the abdomen had become so heated that it gave way. At any rate he was ever after a semi-invalid, lying most of the time on the bed. There he whittled many ingenious things, and made a living by trading cattle, buying and selling, sometimes from description, at other times hitching himself to the window to look upon the cattle. He died at the age of fifty-five and is buried in the Sawyer graveyard in Hill.

Mary Sawyer married Daniel Loverin, and lived to the age of forty-eight, and is also buried in the Sawyer cemetery at the old homestead.

Thomas Sawyer married Juanna Scribner, and moved about a half a mile from the Betfield place and enlarged a house, where he lived, and where were reared his eleven children by birth, and one other adopted. At one time Thomas Sawyer had the largest barn in Hill. It was burned by lightening and all in it save the oxen in the lot and the sheep and cows in the pasture burned. New lumber was cut, neighbors

came from miles around and hewed and helped to build a new barn. Such a life in those days. The resources of Thomas Sawyer, in his ingenuity to conquer vicious horses, refractory oxen, get out of dilemmas, amaze me as I read them from my notes. He died in 1862. His wife Juanna lived till 1875, spending her last years in the home of her youngest son Orrin in Manchester. When Thomas and Juanna lived in Hill their home was a spot where the village prayer meetings were held, and the late Rev. Josiah P. Watson, D.D., told me what a godly women was Mrs. Sawyer, and of how he got his start in life at those meetings.

The following is an excerpt from a letter to me dated 1906 from the same Josiah P. Watson, who was then editor of the Sunday School Literature for the "Christian" denomination, and which pays a fine tribute to Mrs. Sawyer, and also gives us an insight into the life of Hill in 1855.

"While never a pastor of Hill, I began my ministry there, preaching my first sermon at the Sawyer school-house, and I had a fine revival there. The occasion of it all was as follows: In June 1855 Mrs. Sawyer attended a prayer meeting at the house of Elder Jared Green in East Andover, and at the close of the meeting she said to Elder Green, 'Come up to our school-house and hold a meeting some Sunday.' Then turning to me, she said, 'When Brother Green comes you come with him.' At that moment a voice seemed to come to me, from the south west corner of the ceiling, saying 'Go thou.' Going home I said to the Lord, 'If this voice be in reality a call to preach, give me another sign.' After retiring and still praying, there seemed to flash upon the wall of the dark room the words, 'Go thou and thou shalt see seven souls converted immediately.' The next Sabbath morning I drove over Tucker mountain to Mrs. Sawyer's house and said to her, 'There will be preaching at your school-house next Sunday morning and afternoon.' 'Who will be the preacher?' asked Mrs. Sawyer. 'The Lord will send the preacher,' I replied. Next Sunday, July 1, 1855, two days after I was seventeen years of age at 10:30 I preached at the school-house, went home with Mrs. Sawyer for dinner, and preached again at 1 p.m., the old Yankee custom.

A few weeks later, in September, I held prayer meetings in the home of Mrs. Sawyer, and seven young ladies arose for prayers. The meeting was dismissed, all had gone. I stepped to the well curb, and there the seven young ladies stood at the curb. I said, "If you wish more prayer come back into the house." All did so, and in the parlor we held a prayer service, following which each young lady arose and said, "Jesus has forgiven me." Thus I had my seven promised souls. I mention the incident that it may give some insight into the character of Mrs. Sawyer, one of the most sainted old ladies I have ever known. Through her, I have ever felt the Lord extended his call to me. I have her picture and a letter she wrote to me, in which she called me "her son in the faith." I feel myself indeed to be her son; she was a mother to me indeed, and when I reach heaven I shall search very early for Mrs. Sawyer."

Thomas Sawyer of Hill

"Calvin, Betfield, Weare, Warren,
Luther, Clement, Harvey, Orrin,
Betsy, Jane, and Mary Ann -
The old woman, the old man."

So runs the family verse, which gives in the order of their birth, the children of Thomas Sawyer and Juanna Scribner. [Actually it only gives the order of the males correctly, while ignoring the females. The female order is incorrect, since Mary Ann was born before Betsy and Jane. Mary Ann was born after Betfield, while Betsy came after Warren, and then Jane came after Betsy, and then Luther and so on. JN]

Thomas Sawyer was a very powerful man. Being at the grist mill one day, another bet him a silver dollar that he could not pick up a four hundred pound bag of salt, carry it across the mill, and not set it down. He took the wager, carried the salt the distance, then hung it in the fork of two beams, so as not to lose the wager by "setting it down."

Shortly after turning twenty-one, Thomas married and moved about half mile away from his father, where he bought from a man by name of Small a story and a half house, two rooms below and a big room

above. He enlarged by one joint the little old house built identically like the Daniel Webster birthplace. The name of the locality was "Tioga Hill" because there lived an old Revolutionary soldier who was with General Sullivan's army of three thousand men who in the summer and fall of 1779 marched into New York state, joined with Gen. James Clinton, and their united army of five thousand invaded the land of the New York Indians who were allies of the English. One of the spots they captured was a "Tioga Hill" on the banks of the Tioga River in the heart of the Indian country, and one hundred twenty miles from the nearest white settlement.

Whether this Revolutionary soldier was the Small who built the house that Thomas bought, or another near it, I am not sure. Anyhow he was buried in the Sawyer family graveyard, and only a plain field stone marked his grave, pointed out to me in 1909 by Uncle Clem. A hundred yards from the Thomas Sawyer home was the little red school house where the Sawyer boys went to school, and where religious meetings were held from time to time. There on Tioga Hill Thomas and his hard working wife and children found their living, not only for the eleven children of their own, but they adopted a little girl (Viola Eastman) to make the even dozen. Betsy died at the age of sixteen and is buried in East Andover; Betfield was drowned in Smith's River, Danbury, at the age of seventeen, where he was alone in swimming. The other ten grew to maturity, and one Clement Sawyer of Goffstown still lives; a hale, hearty old gentleman of eighty-five.

Thomas Sawyer's only neighbors, as I recall it, were the Hilliard family and the old Revolutionary soldier. The Hilliards had Indian blood in their veins. One of the "Hilliard boys" lived in my day, and acted as my guide trying to find the old place. He had a trait that amazed me – he walked ahead, pigeon-toed, and all the time, or most of it, his head was turned way 'round and he was looking at me and talking with me. I have always wondered if that was an Indian trait. He had coal black hair and beard and Indian eyes. My last visit to the old place was in 1921. I picked up some latches from the doors of the Betfield house, and some from the Thomas house, and some wooden latches of the barn and shed and hog pen, and brought them with me – these with the picture taken of the Thomas house, are all that survives of that house where a family of twelve children and two parents got their living, and sometimes took in a grandchild.

Calvin Sawyer, born 1819, moved down to Haverhill, Mass. to work; he married Azubah Currier and located in Plaistow; he later married Mehitable Eaton of Plaistow and moved to Kensington, N.H., where he died. He has living three children, seven grandchildren, eleven great grandchildren.

Weare Sawyer went down to the Massachusetts line for employment, there he married, lived, and died. His children, Mary, Maud, Will, and Arthur all live, and there are also grandchildren.

Warren (Thomas) married Lucy P. Sleeper in Hill; he married also a second time. Three children are living; Charles Sawyer of Washington, D.C., Belle Sawyer Paige of Orange, N.J., Thomas Sawyer of Goffstown. There are also grandchildren.

Isabelle Jane married James Parker of East Andover; of their children, three are living: Clarence Parker of Waltham, Mass., Ferdinand Parker of Boston, Mrs. Rank Meserve of Somerville, Mass., and Mrs. Fred Bryant, Manchester.

Luther Sawyer, born 1834, married Susan A. Littlefield of Danbury. For many years he had charge of a section on the Boston and Maine R.R., and lived at Andover. He died July 4, 1899; his wife died in 1886. Of their children, the eldest Bessie Ellen died in 1892; Orrin L. in 1908. Those living are Lewis E. Sawyer, Fairview, Okla., Rev. Harvey C. Sawyer, Moultonboro; Mrs. George E. Eastman, East Andover, Luther J. Sawyer, Walpole, Mass., and Mrs. William B. Irwin, Worcester, Mass. There are also grandchildren and great grandchildren.

Clement married Fannie Roberts and both he and Mrs. Sawyer are still living in Goffstown.

Harvey married in Manchester, where for years he carried on a grocery business; both he and his wife are dead and they left no issue.

Orrin also married in Manchester, and while he is dead, his widow and Mrs. Horace Prescott of Manchester, Mrs. William Woodman of Cuba, and Mrs. Sidney Gibson of Alberta, his children survive. There are also grandchildren.

Thus, a goodly group of the living could go back to the ruins of that little house on Tioga Hill, and there pay just tribute to the heroic man and woman, who on the side of Ragged Mountain, found a sufficient living to rear twelve children, and send them forth, equipped to wrestle with life. Verily our ancestors in upper New Hampshire were the stuff of which heroes and heroines were made.

Trip to the "North Country" [about 1918] – Visit to Webster's Birthplace

It had been my desire for several summers to camp for a night in Hill, and to see the sun set and rise on the old Sawyer homestead on Ragged Mountain. So when my friend from Boston visited last summer and wanted to see New London, we hastily made plans for a day, and Monday morning we started out. Myself, wife, little girl Ramona, my brother, and my friend made the party; packed into the Mayflower (made by Henry Ford), we rambled along the way, where one hundred and twenty-five years before my ancestor, his wife and two little boys, crawled through almost trackless wilderness with oxen and sled, a pair of venture-some settlers who joined with those hardy people who settled upper New Hampshire. Betfield Sawyer's home was only seven miles beyond that of Captain Webster, and as they were neighbors and [had] married into the same families [see earlier note on Webster connection – J.N.], I had great interest to stop and see the place where the greatest son of the Granite State was born.

It was about three in the afternoon when we halted the Ford beneath the great elm that Captain Webster planted in 1768. When Captain Webster built his log-cabin in the wilderness, no smoke from white man "curled over the frozen hills between it and Canada." But before Daniel was born, the Captain had built the one story frame house which still stands. In that little structure on January 18, 1782, Daniel first opened his wonderful eyes upon the world. When Daniel was but three years of age, his father moved to the larger Webster home in the "lower village." This later home was the scene of Webster's early recollections, and he tells us how he and Ezekial lay beneath the roof and heard the rain patter, and listened each morning for the crowing of the neighbor's roosters. And there as a boy he learned to read to teamsters who put up at the nearby tavern, and committed to memory the constitution of the United States. When Daniel was 18 years of age his father again moved, this time to the Elms farm. This third home of the Websters in Franklin was dearly loved by Daniel, and of it he once wrote: "This is the most beautiful spot on Earth." Here lived the youth and young man with his ambitions; here are scenes where he rehearsed his Fourth of July address to be given in Salisbury. This last of the Webster homes is now an Orphan's Home; the second place was torn down; so the only distinctive mecca to which admirers of Webster may travel is the birth place. And what a shrine it is. To one whose ancestors like my own, had lived in one of these same one-story, two-roomed homes, deep emotions swell within the heart as one stands within the rooms. Over this doorstep the child Webster crawled – and here sat in June, 1851, a man near seventy, and with swelling heart and choking throat, pointed out to his friend the spots where his father, mother, brother – all gone beyond – had worked and loved.

Inside one breathes the air of colonial courage. Here are a few of the tools and utensils of Capt. and Mrs. Webster, of whom Daniel said, "They shrank from no danger, toil or sacrifice, that they might raise their children." Reverently we touched the simple things of that early humble home, put the little girl into the cradle in which Daniel was rocked, went into the cellar, out into the shed, paused by the old well – and as I stepped into the Ford and looked over house and spot, I bared my head and repeated the eloquent words of my friend, the Honorable Samuel McCall, "This is indeed a memorial shrine – where patriotic Americans and lovers of liberty from all lands can gain inspiration for the duties of citizenship and renew loyal devotion to the fundamental principles of a government that typifies what the great Lincoln declared to be, a government of the people, for the people, and by the people."

The birthplace of other great men have been preserved, but America has no other place like the birth-place of Webster – where still on its original site, surrounded by the rugged, untouched natural scenery, we

stand in the midst of simplicity and humbleness, made grand and glorious because of him who was born there. Webster called it "Our primitive family abode, to which I make my annual visit, and carry my children, that they may be taught the hardships endured by the generations gone before." Would it not be well for more of us to take our children there for the same purpose?

Trip to the "North Country" – A Night on Ragged Mountain

It was about five when we reached East Andover village, and the kind people at the store advised us that the road over Tucker Mountain was very bad, impassable for an auto. But we had come too far to be daunted, and then again we have great faith in a Ford, and though it took every ounce of juice we could give her, and all waled save me, she went up nobly over the steeps, over Tucker Mountain to the base of old Ragged.

On reaching the sites of those two homesteads we browsed about, picked berries, and as night came on, we kindled a roaring fire before the old house, ate our lunch, and danced around the embers to initiate our friend into the Sawyer clan. Having lived her life in Boston, she had never seen anything quite so wild and primitive as were the overgrown roads and yards and doorsteps. One room was cleared away, a bed of fragrant pine and birch boughs was made, and though it was near twelve ere we slept, we were out in the morning to see the sun-rise, as did our ancestors so long before. We washed in the brook, listened to the birds, smelled the ineffable smell of the heavily dewed woodland and berry bushes, and then got aboard and rambled down to East Andover village to break our fast with our kinsman and to return the axe borrowed the night before.

If I thought of McCall's words as I left the Webster place, I thought of words of Webster, as I left the Sawyer place – those words of tribute to his ancestors, when he said in his Saratoga address in 1840 – "In upper New Hampshire the remains of my ancestor's primitive home still remain. I weep to think that none of those who inhabited it are still alive, and if ever I am ashamed of it, or if ever I fail in affectionate veneration for him who reared and defended it against violence and destruction, and they who beneath its roof cherished every domestic virtue, shrunk from no danger, toil or sacrifice that they might serve their country and raise their children to a condition better than their own, may my name and the name of my posterity be blotted forever from the memory of mankind."

Economic conditions have depleted the old landscape of Hill. One-time well-trodden roads are now overgrown; a few scattered stones tell of former location of homes, school-houses, etc., and yet every landmark could tell a story of heroism and sacrifice; of love and loyalty; from which we sprung, and without which we would not be.

East Andover's Little Red School-House

As we rumbled down the hill into East Andover, we halted for a half hour at the most priceless possession of that beautiful little town – its "Little Red School-House." Here it stood, one of the few left of those early buildings that displaced the wandering school teacher who taught in homes of the settlers. The pioneer among the splendid educational institutions that New Hampshire has built. Such an institution as Dartmouth is but the great grandchild of this humble building. It's well preserved – and as I sat in seats where my ancestors learned the three "R's" a century back, again I took off my hat in reverence.

We stopped at beautiful New London, swam in Lake Sunapee, ate lunch beneath the birches on its shores, and when we got down to Manchester we found we had been having the two hottest days for several summers; but we had never dreamed it – the cool air of the mountains, the breezes of constant motoring, the delights of the trip, these had left us in blissful ignorance of the tricks being played with the thermometer.

What a fine state is New Hampshire! There is no other like it in the Union. What heroes and heroines reclaimed the wilderness for their posterity. Daniel Webster makes us think of the ancient Greek in the glorious days of Athens, and the settlers who located around Ragged Mountain are of the stuff of the

earlier Greeks of whom Homer sings. The Webster country is not only a delight in its cool, health-giving airs; it is also an inspiration; and one who visits it, will be refreshed – body and soul.

East Andover Memories of Seventy-eight Years Ago

By Stephen Calvin Sawyer, Roland D. Sawyer's father. Written August 15, 1932

Seventy-eight years ago I lived a year in East Andover, N.H., with my aunt Jane Parker and her husband, Jim Parker. Their home was at the head of the pond, a little way from the depot. Some of the clear recollections in my mind are, a near drowning one day when I went to the pond with Grandfather Thomas Sawyer of Hill, and slipped down the bank while swimming. Another is of stealing the Durgin boys' boat and tying it up our side of the pond. Another is being spattered with steam from the engines as the engineer shot it at some of us kids. But the best of my memories are of going down on the Blackwater River and seeing the Indians who came there yearly to make baskets and camp out. The little Indians of a year or two old could swim, as their parents threw them into the water. The old chief would draw a circle about him as far as he could reach with his long arrow and then bet a half dollar that he could shoot the arrow up so straight it would come down within the circle. He was many times taken up, but as I recall it he always won.

Two winters before that I stayed with my grandparents in Hill, and recall the jolly parties of sleigh rides and the religious meetings in the old school house a hundred yards away. Grandsir and Grandma would sit in the old settle before the fireplace and chat with the social neighbors who came in, and I would sit down before the blazing fireplace. Both their house and the old Betfield Sawyer house have fallen down several hundred years ago. Last year Uncle Clem died at ninety-two years of age, and I at eighty-seven am the only member of my family who can recall these things. I wonder if there are others in Hill or East Andover who recall the visits of the Indians on the Blackwater River and the old chief who won the dollars? John Hilliard of Tioga Hill went out on this river in his canoe one night and shot about forty muskrats.

Chapter 5

The Thomas Warren Sawyer Branch by Howard U. Gant

The Sawyer family had lived for a hundred and sixty years in the West Newbury area of northeastern Massachusetts and nearby southern New Hampshire, when Betfield and Hannah (Thompson) Sawyer decided to move further North up into the mountains around New Chester and begin a homestead for their children. This beautiful area of central New Hampshire, not far from the Merrimack River on the side of old Ragged Mountain, shortly thereafter became the town of Hill, N.H.

There in Hill, Betfield's grandson Thomas Warren Sawyer was born on November 25, 1827, one of the twelve children of Thomas and Joanna (Scribner) Sawyer. Thomas W. was born on a Sunday, the Sawyer family being an honorable religious family.

Thomas Warren Sawyer usually went by his middle name. Our little "Warren" started his life on his father's farm. In some respects it was a good life, but hard work was everyone's task. First forests had to be cleared to make fields, roads built, crops had to be planted and harvested, and there were always the many animals to be tended. In addition to farming, the Sawyer family was involved in the trade of shoe making (leather work), and they established a sawmill. The frontier was slightly safer at this time, however it was still wilderness fraught with danger. "Warren's" grandparents, parents, and siblings were very close. Mutual helpfulness as well as long hard toil insured their survival.

Not much is known about Thomas Warren Sawyer as an individual, but much is known about his family collectively. Their West Newbury, Massachusetts ancestors were Quakers. They were people of a strong faith, honest and hard-working. Most had little education.

"Warren's" brother Betfield, named for his grandfather, drowned at age seventeen, near Danbury, and a sister Betsy, died at age sixteen. They were close in age to Warren. Life was not easy. However, their freedom and independence, the hunting and fishing, the social gatherings, their love for family and friends, they had known for years. All helped to make a quality of life that was quite satisfying to the soul, in one of the most beautiful and unpolluted regions of our country. From time to time, they could always travel down to the southern part of the state, to visit friends and family by the seashore. Their values of decency, honesty, and industry were taught to their children at a very young age, for these wilderness inhabitants with large families had to struggle with life and the elements for the common goal of survival and a hope for happiness and prosperity.

Yet in many ways Thomas W. Sawyer seemed destined to live a tragic life. He was married three times, but he never seemed to acquire a farm or homestead for himself. His first wife, Lucy P. Sleeper (1832-1856), died rather young, perhaps in childbirth. This union produced a son they named George (1852-1918), and a son they named Charles, who died a few months after his birth in 1856.

Thomas Warren's second wife was Mary E. Danforth, of Danbury, New Hampshire. The marriage ceremony was performed on August 12, 1859, by Rev. Holman of Nashua. Warren at the time was living in Andover, New Hampshire. From this short marriage another son, whom they also named Charles, was born on June 4, 1862 in Hill. This was during the Civil War. It seems that no one from the Sawyer family served in the Civil War.

US census records for 1860 and 1870 suggest that Warren was unable to keep his two sons, George and Charles, residing with him. These censuses show George Sawyer living with an elderly woman named Sleeper, who was probably his grandmother.

Neither Mary E. Danforth Sawyer's date of death nor her burial place have yet been located. But in 1869, Thomas Warren Sawyer chose Abby M. (Dunkley) Morgan (1835-1881) as his third wife. Abby was from East Haverhill, N.H., the widow of Cyrus Morgan (1826-1867). Abby also had family connections in the Bow, New Hampshire area. Abby already had two little daughters from her marriage with Cyrus. One

of these, Mettie, born in 1860, died in 1867, and was buried next to her father in the quiet Alexander Cemetery above the Merrimack River in Bow, N.H. This cemetery is on the River Road, not far from "Dunkley Road," and also not far from the early Colby and Dunkley family farms, who were Abby and Warren's ancestors. Abby's other daughter, Olive Morgan (1865-1886) became a half-sister to Abby and Warren's two children, who arrived shortly after their marriage, while they were living in Sanbornton, N.H.

The US Census of July, 1870 shows Thomas Warren Sawyer and his new wife, Abby, living alone, with no others in their household. On November 17, 1870, Thomas Warren's first daughter was born, and they named her Bella A. Sawyer. The 1880 census has her listed as "Abbie," nine years old, living with her mother, Abigail Sawyer, her brother, Thomas, age six, her half-sister, Olive Morgan, age fourteen, and her Aunt Flavia (Dunkley) Sargent, and the head of this household, Arthur Sargent, machinist.

The above information proved to be quite important in confirming Thomas Warren Sawyer Jr.'s strong belief that he and his sister Bella, were full brother and sister, with Thomas Warren and Abby as their parents. A slightly careless distortion of the truth is evident when one reads Bella's death certificate, which states that "Mary Danforth Sawyer was her mother." The source for this error possibly came from an informant who had read R. D. Sawyer's genealogy, which also stated Mary Danforth as Bella's mother. Finding Mary E. Danforth's death record or tombstone would end the controversy. But frankly, the above information seems to bear out Bella's brother Tom's insistence that he and Bella's mother was Abby.

The picture is one of a continuing struggle against poverty. Thomas Warren Sawyer drowned on January 28, 1873, two months before the birth of his little son Thomas Warren Sawyer, Jr. (1873-1953). There was some mystery surrounding Thomas Warren's death by drowning in Tilton, N.H. at age forty-five. He was laid to rest in the Congregational Church cemetery in East Andover, N.H. next to his first wife, Lucy (Sleeper) Sawyer, and their infant son, Charles. Thomas Warren's parents are buried just a little west of the church, in the larger East Andover cemetery.

Thomas Warren Sawyer lived his entire life in the Hill region of New Hampshire, never owning his own farm, probably renting in one or another of the surrounding towns. His early death plunged his widow Abby and their three children further into poverty. Warren's two older sons, George and Charles, were also, more or less, on their own, though there were always Sawyer family nearby, who could help. Abby M. (Dunkley) Morgan Sawyer sought shelter with her beloved sister, Flavia (Dunkley) Sargent. But eight years after the death of her husband, Abby too died, at the age of forty-seven, and at that point all of the children of Thomas Warren Sawyer, Sr. became orphans.

Abby's parents, Moses and Lucy W. (Jeffers) Dunkley, of East Haverhill, N.H. brought her remains back to the little farming community where they lived. It is very peaceful to be in that quiet cemetery to read the epitaphs of this loving mother, buried next to her parents. And a few more clouds had to be braved by this family of Sawyers.

Abby (Dunkley) Sawyer's ancestry was rich in historic New England surnames. She was directly descended from the Colby, Carr, Chase, Jeffers, French, Blaisdell, Wilson, and Platts families, and she had common ancestors with her husband in the Colby and Blaisdell families. In death, Abby (Dunkley) Sawyer had come home to the fields of her childhood. Olive, her only surviving daughter from her first marriage to Cyrus Morgan, died in 1886, at the age of twenty-one, and was buried with her father and sister in the cemetery in Bow, N.H.

Thomas Jr. and his sister, Bella A. Sawyer went to live with relatives. One legend tells of little Thomas deciding to strike out on his own at the age of about twelve. When Uncle Clem Sawyer and Aunt Fannie A. (Roberts) heard that he was hungry and cold in Boston, they went and brought him back to Goffstown, N.H. to live with them. They were childless and Tom found a home with them. For a good part of his life, Goffstown was a home for Tom and his family. Many Sawyer family reunions were held in that town, and Uncle Clem and Aunt Fannie were hosts for many.

The two young siblings, Bella and Thomas, were separated for a while, as Bella went to live with another aunt and uncle in Manchester. It was said that this particular aunt and uncle had a store there. To the end of their lives, Bella and her brother Thomas, were very fond of each other.

Their two older half-brothers, George & Charles Sawyer, also moved down to southern New Hampshire. In fact, the history of this Betfield Sawyer branch shows that the experience of homesteading the north country lasted about one hundred years, and after that most, if not all of the Sawyers were back down from whence they had started, to where the Merrimack River empties into the Atlantic Ocean, near the Massachusetts-New Hampshire border.

Roland D. Sawyer wrote in his notebook that George "was a character and a genius. He was reared by his over-kindly Sleeper grandparents, and inherited their money before age twenty-one, but he put this through [spent it all?]. He then went West to work for Studebaker in Elkhart, Indiana, and learned the trade of carriage painter. He returned East in 1886 to Amesbury, MA and secured work as a striper or varnisher, and was considered the best 'striper' in Amesbury. He made his home there in Amesbury for a while with his cousin Stephen of Kensington, then moved to Lowell where he lived for many years. In 1914 he turned up at Stephen's again, spent the winter, got on his feet, and set up in auto-painting. He was a genial companion, and an intelligent conversationalist; but whenever he got much ahead he reverted to his early days and blew it in." Apparently George never married, and he had no children. He died and is buried in Exeter, N.H.

Charles, born in 1862, married Cora Estelle Hall at Concord, Feb. 9, 1882. Their child, Estelle May, was born Nov. 7, 1884. Estelle May never married, and moved to Washington, D.C. with her parents. They found good employment there. Estelle May Sawyer was always friendly with her Aunt Bella, and made many visits to the home of her Aunt Bella and vice versa. Estelle died in Washington, D.C. in the 1960's and she left a will.

Bella A. Sawyer, after the death of her mother, moved to the city of Manchester to live with her uncle and aunt. Photos show Bella at age twenty to be quite attractive. She was bright and artistic and only four feet ten inches tall. When she was twenty-one she met the man who changed her life, and poverty was no longer a problem.

On October 10, 1892, Bella A. Sawyer became the bride of Almon Dobbins Page, who was then aged thirty-two, and who worked as a General Sales Manager. Almon was a man of sterling character, whose life was in many ways had been similar to Bella's. He too had lost his father, Truman Page, in a tragic way. Truman was a corporal in the Michigan Cavalry and was killed in the Civil War. His mother had also died at age forty-seven after heroically getting her family a good start. They both were from the earliest New England families. Almon's ancestors were the Wilkins, Kendalls, Bradfords, Brooks, Baxters, Hutchinsons, etc. Almon's step-father was the Rev. Jesse E. McAllister, a friend of his grandfather, Rev. Jacob Dobbins of the Michigan Conference, Methodist Episcopal Church. Albion College, in central Michigan, was where Almon was sent to gain an education.

Almon was a bright, industrious young man of thirty-two and had a fine position with General Electric Company, Edison Lamp Works Division in Newark, New Jersey. He was an employee and friend of Thomas A. Edison. The home Bella moved to as a young bride was in Newark, N.J. They soon had everything going for them: a big home, automobiles, four children, modern conveniences, and good educations for the children. Vacation travel took them far and wide, to Lake Ontario in summer, to Florida in winter, and with always a trip back home to see the Sawyer family in New Hampshire. Their children were Robert Sawyer Page, Elizabeth Page, Beatrice Page, and Almon D. Page, Jr., who still lives along the New Jersey seashore.

At his retirement in 1922, Almon D. Page Sr. moved with his family down to the southern part of rural southern New Jersey to a small town named Clayton (formerly Fislerville). It was here that his children married. Almon had purchased a huge estate called "Grove Lawn." It was the former mansion of a glass manufacturer named John Moore. Sitting on fifty-eight acres, the estate had mature trees and lawns and

shrubs of many varieties. Almon wanted to farm a little and raise chickens. I suppose he was, in a way, going back to what his life had been as a boy in Hillsdale County, Michigan. He enjoyed his retirement. An incurable entrepreneur, for the next twenty years he kept busy. The Grove Lawn Tea Room was quite a nice restaurant he owned on the side of his mansion. He farmed, raised poultry, sold travel trailers, sold antiques, etc. Soon there were twelve grandchildren. That estate, with its fifty-eight acres, barns, garages, tool rooms, chicken houses, and trees and woodlands, was one of the finest places any children could grow up. Mr. Page even owned an ice cream parlor near the front of the property along the highway. His grandchildren never really lacked for desserts. Golf was a passion for Mr. Page. He had been to many tournaments. His son, Robert, built and raced speedboats and sailboats. He had learned engineering at Cornell University and spent many years managing his father's estate.

Toward the middle of 1936, Bella became ill and was never to recover. She grew many flowers in the flower beds at Grove Lawn, and had a hired hand to help her. Her favorites were the roses and violets. About that time a grandson, Charles Messmer, was killed by an auto in Miami where the family was spending a few weeks during the winter of 1933-34. From these experiences you never fully recover. Bella A. Sawyer Page died on October 24, 1938. World War II was about to start and the carefree days and nights of those happy times at Grove Lawn were about to end. All over America people were gearing up for a long siege. Rationing and glum news about the war was on the radio. Everyone was going into the armed services or into defense work. School children went to school, and for the most part were spared the agony of their European and Asian counterparts. But Grove Lawn was never the same. A few of Almon and Bella's grandchildren entered the services. Some of the adults entered defense work. Mr. Page's traveling days were over. He loved his family and his estate. He had lifted himself up by his bootstraps to amazing heights. He had done so much, and had seen the heights and the depths of life. More importantly, he seemed to have the wisdom to understand it all. God had blessed his life. His death was on March 3, 1944 at his home in Clayton.

His grandchildren were:

Betty Messmer (1923-
Charles Messmer (1926-
Robert R. Page (adopted) (1927-1977)
Jesse Robert Gant, Jr. (1926-
Isabel K. Gant (1927-
Howard U. Gant (1928-
Donald F. Gant (1930-1995)
Rev. Edwin Page Gant (1935-
Carol B. Gant (1939-
Mary Elizabeth Gant (1946-1947)
Barbara Ann Page (1934-
Victoria Page (1937-

Many of Almon and Bella's descendants still live in South Jersey area. The Grove Lawn estate was sold in 1945, and the mansion itself was demolished in 1971. Mr. and Mrs. Page are buried in Clayton.

Thomas Warren Sawyer, Jr. (1873-1953) was the only other child of Thomas W. Sawyer, Sr.'s marriages who married and had children. Thomas Jr., who became a machinist, married Ellen King, daughter of Arthur and Mary A. (Squire) King, of Philadelphia, PA. They were married in New York, N.Y. on December 13, 1902, not far from his sister Bella's home. At that time Thomas Jr. was also working with Thomas A. Edison (G.E.). Bella and Almon probably attended the ceremony and joined in the celebration. From this marriage Tom and Nellie produced three children, Gloria (1904-1995), Flavia (1909-1986), and Warren King Sawyer born 1915, who now lives in Zephyrhills, FL.

Gloria Sawyer grew up in the Goffstown area and married Robert Kelley, but they had no children. She worked for many years as an executive secretary.

Flavia Sawyer married Carl Hardy, and they resided in Goffstown. Their two children were Caroline and Edith Hardy. Caroline married a Mr. Quinn and Edith married Mr. James Miller. They both have moved from N.H. to the mid-west. Flavia died in Goffstown in 1986.

Warren King Sawyer also grew up in the Goffstown area, and married Eugenia M. Pennewart, a nurse of Dutch descent, daughter of Richard and Rosine (Rogers) Pennewart of Chelsea, MA. Warren became a successful independent grocer, and retired to Zephyrhills FL, where he grows fruits and vegetables in the back yard. Warren and "Jeanne" have two sons and six grandchildren.

Their son Thomas Warren Sawyer, born in 1937, married Elizabeth Hair, and lives in Bloomsbury, New Jersey, where he is a teacher and high school administrator. He and Elizabeth have two children, Scott Sawyer and Shawn Sawyer.

Warren King and Eugenia Sawyer's second son Richard Warren Sawyer, born in 1939, married Jean Kelleher and lives in Hampton, N.H. They have four children, Paula, Stephen, Kevin, and Vickie Sawyer, who have all finished college. Amazingly, Richard and his family are living in the same area where his immigrant ancestor William Sawyer began his American experience three hundred and fifty years ago where the Merrimack River joins the Atlantic Ocean.

Genealogy sometimes gets bogged down with statistics. But as Rev. Roland D. Sawyer proved, a short, concise, accurate history of your family, sprinkled with tragic or humorous anecdotes, can make fascinating reading. Our ancestors, with their love for their families, constantly sacrificing, giving, providing for their loved ones, is a heart-warming, truthful story. The Sawyer family of New Hampshire, who were never very far from the evergreen forests and winding Merrimack River, have thousands of descendants throughout America today. We seek to learn more about these brave pioneers, whose sacrifice, toil, care, and prayers have made our lives what they are today.

Chapter 6

Thirty-Five Sawyer Family Pictures 1840 - 2001

We are unusually fortunate to have good photographs of seven of Thomas Sawyer and Juanna Scribner's ten children who lived to adulthood. Of the total of their twelve children, Betsy died at age six, and Betfield died by accidentally drowning when he was seventeen. The first two pictures are a drawing and an oil painting. The painting is in color of course. The rest are photographs. None of the images shown here of the first generation were made from the original photographs, so the reproduction quality here has suffered accordingly, because these are reproductions from reproductions, not from originals. The computer has been used to enhance the images as much as possible. This can be done by increasing contrast, removing blemishes, and so on. However, the computer can put back variation in grey scale which is not there in whatever was scanned. Older techniques for copying photos caused a great loss of grey scale definition, and copying these copies only compounds the problem. The image just below of the painting of Calvin Sawyer was made from an original photo of the painting, so more shading is visible in the face, though the painting was not of extremely high quality to begin with. A few images were captured from printed books. An example is that of Jeremiah Littlefield. The source used here was printed, and thus it was composed of many small dots. When these are scanned, they remain visible, showing a sort of geometric pattern. To make this less objectionable we use a technique called "Gaussian blur." But if we blur too much, we lose detail in the picture, so some pattern remains. The first original used among images below was the picture of Stephen Sawyer and his wife Phoebe in their carriage on page 114. All the rest of the images were from original photos, except the two of RDS barefoot in 1909 and of his mother, both on page 116. The newer photos in this case appear of much higher quality. Older original photos can also be of extremely high quality, but to capture this it is necessary to have the originals.

Chapter 7

Genealogy of the Descendants of Betfield Sawyer of Hill, NH

1. **Betfield Sawyer** b. 25 Mar 1774, Newton, Rockingham, NH, (son of Bitfield Sawyer and Sarah Colby) occupation shoemaker, farmer, m. 22 Jun 1793, in Kingston, Rockingham, NH, **Hannah Thompson**, b. 6 Oct 1776, Kingston, Rockingham, NH, (daughter of Thomas Thompson and Judith Blaisdell) d. 25 Aug 1847, Hill, Merrimack, NH, buried: Betfield Sawyer Family Cemetery, Hill, NH. Betfield died 10 Sep 1835, Hill, Merrimack, NH, buried: Betfield Sawyer Family Cemetery, Hill, NH.

Children:

2. i **David Colby** b. 9 May 1794.
3. ii **Thomas** b. 24 Jan 1796.

iii **Polly Sawyer** b. 6 Mar 1797, Carter Village, Newton NH, d. 23 Dec 1797, Carter Village, Newton NH.

iv **Hannah Sawyer** b. 18 Oct 1798, Carter Village, Newton NH, d. 1802, ??Carter Village, Newton NH. If buried at Betfield Sawyer Cemetery, Hill, NH, no grave marker survives in 1995.

v **Luther Sawyer** b. 1 Jun 1801, Carter Village, Newton NH, d. 3 Jun 1856, Hill, Merrimack, NH, buried: Betfield Sawyer Family Cemetery, Hill, NH.

vi **Mary Sawyer** b. 29 Aug 1804, Carter Village, Newton NH, m. **Daniel Loverin**. Mary died 13 Aug 1852, Hill, Merrimack, NH, buried: Betfield Sawyer Family Cemetery, Hill, NH. RDS says that Mary had several children but that they all died young.

vii **Calvin Sawyer** b. 3 Dec 1807, Carter Village, Newton NH, d. 23 Jan 1813, Hill, Merrimack, NH, buried: Betfield Sawyer Family Cemetery, Hill, NH.

viii **Betsy Sawyer** b. 9 Mar 1813, Carter Village, Newton NH, d. 23 Apr 1816, Carter Village, Newton NH, buried: Betfield Sawyer Family Cemetery, Hill, NH.

Second Generation

2. **David Colby Sawyer** (1.Betfield[1]) b. 9 May 1794, Carter Village, Newton NH, m. **Mary E Unknown**. David died after 1857, Manchester, Hillsboro, NH. RDS does not give a death date anyplace. He probably lived quite a while after 1857, which is the date on a sermon he wrote when he was age sixty-two, and he is said to have lived a long time. He is probably buried in Manchester where he died. Both his children died in early childhood, which from his writing seems to have discouraged him from trying to have more.

Children:

i **Mary H. E. Sawyer** b. 30 Apr 1829, Hill, Merrimack, NH, d. 30 Dec 1832, Hill, Merrimack, NH, buried: Betfield Sawyer Family Cemetery, Hill, NH.

3. **Thomas Sawyer** (1.Betfield[1]) b. 24 Jan 1796, Newton, Rockingham, NH, m. **Juanna Scribner**, b. 5 Aug 1800, (daughter of Ebenezer Scribner and Mehitable Tucker) d. 11 Feb 1875, Manchester, Hillsboro, NH, buried: East Andover, Merrimack, NH. Thomas died 11 Jan 1862, Hill, Merrimack, NH, buried: East Andover Cemetery, NH. **Juanna**: RDS put Juanna's birth in 1798. However, Shirley (Winroth) Danahy told Howard Gant the above birth date, and Shirley has seen her birth certificate. As a matter of fact, the absence of the names of any parents on this certificate has caused several people to be uncertain of Juanna's exact ancestry, though her name definitely appears in Ebenezer Scribner's will in several places. Juanna's death at Manchester is assumed, since she lived the last years of her life with her son Orrin, who lived in Manchester.

Children:

4. i **Calvin** b. 26 Mar 1819.

ii **Betfield Sawyer** b. 20 May 1821, Hill, Merrimack, NH, d. 17 Jul 1838, Danbury, Merrimack, NH, buried: East Andover Cemetery NH. Accidental death by drowning.

Orrin died 3 Mar 1913, Manchester, Hillsboro, NH. Many are confused about the order of the two names Orrin and David. It is written many places in both different ways. David Prescott has his marriage license from the middle 1800's, on which it was written Orrin D. Sawyer. This is the earliest documentation I have heard of. **Ellen**: David Prescott has William M Rogers original will dated 1878, making provision for three sons and one daughter. One son died in 1888. DP also has news clipping marking W. M. Rogers 50 th Wedding anniversary. Since WMR died in 1892, his 50 th anniversary was before that, thus he was married before 1842, possibly as early as 1839, which was at least five years before Ellen Mary was born in 1847, proving she was his child. A death notice for Sarah Gibbs in 1893 states she was survived by two sons and two daughters, one being Ellen M R Sawyer, the other Mrs. Charles Gibbs ???

Honorably discharged with rank of Captain in 1967, and attended Harvard Graduate School of Business Administration in Boston, MA from 1968 to 1970 when he received an MBA degree. Jay held many positions in business, including working in Washington, DC for well-known management consulting firm, Booz, Allen, and Hamilton from 1972-1974. Left business life in about 1976 to sail his forty foot sailing sloop "Daybreak" for five years. Sailed about twenty-five thousand miles off-shore, including five round trips from New England to Caribbean, three of which trips he made alone, or "single-handed," as sailors call it. In about 1982 he met Natasha Salvo and decided to raise a family. They were married in 1987, the same year their first son, Julian, was born. In 1989 their second son, Simon, was born. Between about 1983 and 1997 they lived in Cambridge, Somerville, and Newton, MA, during which time Jay operated a small computer sales and consulting business. In about 1996 a long term interest in genealogy became a new career, when Jay was asked to produce a book on the ancestry of his friend, Dr. Jack Templeton's family. Since then Jay has published eight complete books of genealogy, plus second editions to two of these. The family moved to Newcastle, Maine in 1997 where they still live as of 2001.

Appendix A

Specific Computer Tools Used in Producing this Book

A few readers may be interested in the technical computer aspects of the production of this book, which I hope benefited from my own personal background with computers. Computers are evolving extremely rapidly at present, so the tools I used changed quite a lot during the several years I have been working on genealogy full time. In a research project such as this, large numbers of people cannot be managed efficiently without some sort of genealogical database program. Eventually the genealogical information must be transformed into text and combined with pictures, maps, documents, charts, and other graphical material. Chapters of the book must be combined into a whole book with a table of contents, and most importantly, indexes to genealogical data must somehow be made.

Indexing Considerations

Only very recently, several of my genealogical acquaintances were still making indexes by using manual techniques. This can take a week just for one index in a moderate-length book. In a book of genealogy like this one covering more than 7,000 names, or possibly even more names, it is not efficient to have just one master index at the end of the book. A book may contain several genealogies, and it is desirable that each genealogy have its own index; otherwise, the indexes grow too large and inconvenient to use. Thus, I have started to provide separate indexes to any chapter, which contains an entire family's genealogy or ancestry. In addition, I provide a master index, if more than one genealogy is involved, so that someone can make a quick check of the whole book. Since genealogies have many pictures of people, it is desireable to have the index reflect whether a particular index reference is to a person's photograph, or to information about them. In the master index I eventually found a way to make page references to people in photograps appear in bold type, as opposed to text references, which are not bolded. This and other advanced indexing features are not present in most ordinary word-processing programs.

While several of the better-known word processing programs, particularly Microsoft Word, have the capability of combining multiple chapters into a "master" book file and generating an index for it, Microsoft Word Version 8, 1997 does not have the capability of generating multiple indexes in one book, or even of generating an index for a single chapter file, in which the first page number of the chapter is *not* page number one, but rather perhaps page number 436. A couple years ago when I worked on a previous book, I used Microsoft Word Version 6, 1995, which did not have that particular limitation but which had other limitations. FrameMaker by Adobe is one advanced writing program which I have found really excellent, and which has the necessary built-in flexibility to deal with these indexing problems and others.

It is because of many small, but nonetheless difficult problems of this sort that I am adding this technical appendix. I did not anticipate any of the problems I had, and solving the various problems took quite immense amounts of time. In this instance, though I am quite experienced, I might not have been able to reach the end result I wished for had I not fortunately had the assistance of my wife, Natasha Salvo, who has extraordinary experience and expertise in technical writing over the past fifteen years.

Database Considerations

The biggest problem concerns the indexes. On the simplest level, we begin by accumulating genealogical data in a genealogy program of a type known as a database. This data is added to, corrected, modified, edited, and re-corrected countless times, usually over the period of a year or more. In this book I used a genealogy program called Brothers Keeper Version 5.2 for Windows 98. Brothers Keeper is superior in many ways to some other programs I have looked at. The program is also modest in cost, extremely reliable in that it does not lose data, and in times of crisis allows the user direct access to the program's author, John Steed, who is extremely helpful and responsive. John Steed's program Brothers Keeper is "shareware," which means he encourages users to give copies of the program to others, who should eventually

mail John $45, if they decide they like the program enough to use it. A 98% functional, non-time-limited version can be downloaded free from the Internet at the following address or URL:

http://ourworld.compuserve.com/homepages/brothers_keeper/

There are many genealogy programs now available on the market, and they offer a range of differing features. One can spend a lot of time experimenting. Any one program will probably not deliver everything you wish for. More importantly, you will not discover the real problems until you have used a program for some time. I can only attempt here to tell you some of the problems I went through, because it is likely you may encounter similar problems if you attempt a similarly complex book, no matter what tools you use. Regarding programs, it is important to prioritize your needs. Even though there are probably hundreds of millions of computers in use today, most people still have little insight into these machines and do not realize how vulnerable they are to mechanical failure, lightening strikes, computer virus, software failure, and so forth. Since genealogy is an activity that extends over a long period of time, genealogy computer files are particularly vulnerable to computer problems of all kinds. Thus, these files must be frequently backed-up to media outside the computer, and the computers must be protected by up-to-date surge and lightening protection such as uninterruptable power supplies, and from computer virus by up-top-date anti-virus software. It is also advisable to place reliability at the top of your list of criteria for genealogy software.

Recently John Steed released version 6 of his excellent Brothers Keeper program. I have installed this and played with it, though I would never change my tools in the middle of a project. Version 6 of the Brothers Keeper program offers several significant improvements over the earlier version 5.2, and I will undoubtedly use it in my next project.

Importing a Database Report into a Word Processor

Once you complete the data entry phase, you will have to output a report file. Brothers Keeper, or BK5 as it is known, exports to about five different file formats intended to be usable by different word processors. Several years ago I tried to use the one supposed to be usable by a Lotus word processor called Ami Pro Version 3.1. Unfortunately, this word processor could not make the required indexes. This is one of many examples of computer behavior that does not work as advertised or expected. Experienced computer users know this is common and simply try to find alternative ways to accomplish their goals. BK5 will also output files compatible with Word Perfect, but I have never tried those. I next used BK5 to output in an RTF file format compatible with Microsoft Word. RTF stands for "Rich Text Format," which is a format that can be read by many different word processors, but not all of them will necessarily be able to make an index using RTF files made by BK5.

When BK5 generates its report file, it makes or "embeds" an "invisible" index mark next to every name in the report. This mark does not appear on the computer monitor screen, unless a special program mode is selected, so it is easy to be unaware that these marks are there. However, it is crucial that the Genealogy Database Program generate these marks accurately, and in a standard format which can be readily recognized by other programs. Other programs are supposed to "read" these index marks in making their indexes. Microsoft Word does a fairly good job at this, except that, as mentioned above, the present Version 8, 1997 is only able to make one index per file or per book, and the file or book must begin with page number one. This was a limit I could not live with. Furthermore, though the earlier version of MS Word Version 6, 1995 produced an index that could be edited, MS Word Version 8, 1997 does not seem to produce an editable index. It is essential to be able to edit the index, because there will always be entries that need to be modified. In order to learn these limits of the present Version 8 of Microsoft Word, I needed to spend about three hours on the telephone with Microsoft. It is unrealistic to expect that everything will work as you expect or as the program vendor advertises. Another serious handicap of Microsoft Word is that the spell-checking function crashes very often, when it is asked to work on large files of fifty

to one hundred pages, which it "sees" as having very many spelling errors. In a large genealogy report, there may initially be very many abbreviations, plus very many different names, all of which the spell-checker cannot recognize. Microsoft Word's spelling checker crashes in such a way that a reboot of the whole computer is required. At the same time, unsaved data is often lost.

Another problem that can occur when outputting large reports in the range of one hundred pages or more from BK5 is the sporadic injection of occasional, extra, unnecessary, formatting commands into the RTF report file generated from the genealogy database. These are usually invisible on screen in the RTF report file. Even after the report file is read into or "importade into" a word processing program, these extra characters may be extremely hard to see on screen. A typical one-hundred-page report should be a rather small file. However, after importing this file into the word processor and asking the word processor to generate an index, it may take a very long time, or sometimes not even complete the index. Yet with current very high-speed computers, such a task should not take more than ten seconds. If it does complete the index, you may notice that for no explicable reason, the file has increased ten times in size. I first noticed these sorts of problems when attempting to import a Word file into the FrameMaker program. FrameMaker was persistently unable to convert the file to the FrameMaker format, though normally FrameMaker has no problem with Word files. It was then necessary to go through a lengthy, several-hours-long, trial-and-error process during which first just the beginning part of the file was converted, and then increasingly large chunks of the file were converted, until the file would no longer convert. Then the last small section that seemed to be causing the trouble was examined in minute detail in various ways until the spurious commands (characters) were found that were causing the trouble. This type of debug procedure requires a significant amount of skill. Usually this was just several isolated characters. However, it was not easy to delete them, and that part of the file needed to be "repaired" carefully. I mention this problem simply to illustrate that the process presently required to achieve a result is cumbersome, requiring as it does the use of at least four different programs in combination, none of which was specifically designed to work together with the other three. This problem may stem from the fact that BK5 only allows for seven lines of notes inside each genealogy record. If more extensive notes are required, BK5 "spawns" an external text file, which can be edited by various editors. Even if one uses a simple editor like Notepad, there is the possibility of picking up unwanted formatting commands in these files, when text is pasted into these notes files from other sources. This is not supposed to occur; however, in a large study, a BK5 database file might easily have hundreds of external text files associated with it. The BK5 report-generation routine must combine each text file with each associated person record, and I have observed various imperfections that can occur in this process. Some of the more obvious of these problems can be relatively easily corrected by editing the report file in the word processor. However, some of these problems are far harder to deal with, such as the "invisible" stray formatting commands, which can hang up the index process and expand the file size by ten times. The latest version of the genealogy program, BK6, keeps very long notes internally, which probably will greatly improve this particular problem. There are still some advantages to keeping external notes files. To do this, I have recently found an excellent free program called EditPad, which replaces both notepad and wordpad which come with Windows 98, and is very much better than either of these two older programs. EditPad can be obtained from the Internet address: http://www.jgsoft.com.

A third problem I encountered specific to BK5 when used in combination as described here concerns foreign characters such as German umlaut characters and various of the French accent characters. BK5 has a routine by means of which such characters can be entered into the database file. This requires the use of a dialog box rather than keystroke combinations, which is slow and cumbersome, but at least it can be done. When these characters are exported to an RTF file and read into a word processor, they may appear correct on screen, though they are not always indexed properly by the word processor. If a Word file is imported into the FrameMaker program, these special characters appear correctly on screen, but every one of them will be indexed incorrectly, requiring at least moderate skill and time in FrameMaker to correct or repair. Though the use of special characters in the 5.2 version of the BK5 database no longer seems to cause major

indexing problems in conjunction with the latest version 5.5 of the FrameMaker program, these problems merely illustrate the sorts of problems which often occur when transferring relatively large and complex files from one program to another, as is required when writing a genealogy book.

On an earlier book I used the above "stage" passing through MS Word, because I knew it was compatible with the RTF files output by Brothers Keeper and because I was quite familiar with the program. Since then I have learned that it is possible to import these same RTF files directly into the FrameMaker program. Thus, I have myself now reached the point where I think that using BK5 directly with FrameMaker offers a combination of advantages for book-making not presently available with any other software I know. Furthermore, if you ever expect to produce a genealogy book and if you are not already familiar with Word, I would definitely by-pass Word altogether and go directly to the FrameMaker program, Version 5.5 or later, even though it is considerably more expensive. FrameMaker has all the necessary capabilities absent from MS Word. I am fortunate that my wife is expert at FrameMaker and was able to import the Word files and make the many small necessary adjustments. I observed these adjustments being made and can only report that the sum total of all of them required considerable time on the order of a couple days. Most of this time was spent on indexes and the problems associated with special characters mentioned above. Nevertheless, this time spent in editing and "repair" is trivial when compared with the time formerly required to produce books with equivalent attributes.

With regard to considerable possible indexing problems, an external third-party utility program is available for FrameMaker called Ixgen, which is designed to facilitate the correction of these sorts of indexing problems. The use of Ixgen can radically reduce the time required to obtain a good index.

Notes and Bibliographies

In addition to the above, I used a separate program for notes and bibliography called Endnote Version 2. Though all the programs named above have some degree of ability to handle notes, they did not afford the degree of flexibility necessary when generating large reports from genealogical databases. In making a book of this kind, numerical references to notes at the back of the book must be embedded in the actual genealogy data files. Thus, the normal footnote-making capability is not applicable, because it only works with text entered directly into the word processor. While there are undoubtedly many alternative ways to solve these problems, I merely wish to point out the types of problems that do occur. Sometimes a particular reference note will grow in length to several pages or more throughout the course of a year's research, and you may wish to refer to this note from several different chapters. This is normally difficult to accomplish using only the capabilities built into the word processor. Since I began using the EndNote 2 program, the producer has come out with a Version 3. I have not used Version 3, since Version 2 was perfectly sufficient for the needs discussed here. The EndNote program is not primarily designed for the use I have described, though it works well for it. It is primarily for the authors of technical articles published in journals, where many technical references are expected. Recently, it has become general practice to import these citations directly from databases on the Internet.

Making Genealogy Charts

I used another program called Reunion Version 4 for Windows originally, made by Leister Productions Inc., to generate certain charts. Reunion was an excellent genealogical program, though I preferred to use Brothers Keeper. Brothers Keeper can make excellent small charts, especially when coupled with a laser printer. However, Reunion had a separate chart-making module called Superchart 4, which was greatly superior to all other genealogical chart-making programs. To make such charts it was necessary to use the Brothers Keeper program to *export* its database to a common genealogical file format called GEDCOM. The Reunion program could then *import* this GEDCOM file, whereupon Superchart could make charts from the data. Superchart 4 has the capability to generate charts up to forty-five generations "deep" and output them to plotters, which can print in color on paper three feet by four feet in size. The Leister

Productions Company in Pennsylvania, the original maker of the Reunion Program, sold this program in about 1996 to the Sierra Corporation, another larger software company. Sierra Corporation significantly expanded and improved the Reunion 4 program, and released the new version in October 1998 under the program name Generations 5. Generations 5 costs about $50 and has extensive capabilities not present in Brothers Keeper or in the earlier Reunion program. In my opinion, Generations 5 is worth purchasing for the chart-making module alone, which is quite unique, and is now called *Easychart*. Generations 5 has now grown to include a suite of programs, so Easychart is only a small part of the whole package you receive for the modest price. Sierra asked me to be a "beta tester" for this program, so I have had some opportunity to explore it. However, I have not used it extensively and have not worked it hard. If you use Brothers Keeper as I do, it is still necessary to "export" the Brothers Keeper data to a GEDCOM file, which is then "imported" into Generations 5. Once this is done, Super Chart can be used in conjunction with a large plotter to make very large genealogy charts in color.

Programs have become much more powerful than they used to be, which is good, but at the same time these programs have become extremely complex and hard to evaluate in a short time. Generations 5, or more specifically its genealogy database module called *Easytree,* seems to me to be one of the most powerful programs for genealogy I have seen so far. It includes many features usually absent from earlier programs and certainly never seen all together in one program before. For the collection, storage, and organization of genealogical data and notes, it appears to lack nothing, including features that perhaps only "professionals" would ever use or think about. It also has an excellent user interface and would be relatively easy to learn, considering the many features it offers. However, I have not so far explored in detail its report generation capabilities. Certainly it generates all the basic reports that most genealogists would want. However, a smaller group of more serious genealogists may wish to publish their work in book form, and I am not sure how much flexibility this program offers in its ability to customize reports. It definitely offers some choices regarding which data to include in the report. However, so far it does not offer alternative formats for the basic reports. The BK5 program offers an unusually nice *Register Report*, which I like better than the Register Report in Generations 5 Easytree. Such differences become important when one wishes to publish a thousand-page book, perhaps half of which will be generated by the genealogy program in the form of reports. The makers of Generations 5 Easytree might argue that the report can be further formatted in a word processor, after being exported by Easytree. This is only partially true, since reformatting many large reports in a word processor is far too time-consuming.

When creating full-length books, I have never been able to predict ahead of time all the technical problems that would arise during the process. Some problems can be solved as you go along. However, some problems proved extremely time-consuming to fix or solve, while a few proved impossible. The indexing limitations of MS Word 97 described above were a case in point, and forced me to abandon Word entirely for the purpose of making books. So it is too soon for me to say whether Generations 5 Easytree will prove better overall than the combination of programs described earlier in this section. An extremely important criterion of genealogy is the reliability of the database itself in never losing data. Data loss can occur not just by record loss, but by errors occurring in the links between people. Data loss can also occur when the program crashes. Some programs crash frequently, some almost never. Brothers Keeper is in the almost-never category. Some programs can perform their basic functions for weeks on end without a hitch, but react in repeatedly bizarre ways when asked to do something a little more difficult, such as writing a 200-page, 4,000-name report to disk. For all of these reasons, if you find a program that works for you over time, it is wise not to abandon it abruptly for a slightly larger feature set, unless you are under pressure for some reason to seek new features.

Graphics

Finally, some understanding of digital graphics is essential for quality book-making. Most newer genealogy programs and word processors have the ability to handle graphics to some degree, although

programs vary greatly in the ease and versatility with which they do this. I didn't want to store photos of people in a genealogy databases. However, in book-making it is extremely desirable to be able to incorporate graphics. This includes not only photographs of people, but images of all kinds including maps, documents, and in some cases, places or buildings. The subject of scanning digital images into computers has become very complex, so I will only touch upon the most basic issues in an attempt to familiarize those thinking about this for the first time with the basics.

The incorporation of graphic images in books involves the use of specialized software and specialized hardware. I have already mentioned the software program Adobe FrameMaker, which I used for assembling genealogy books. I have found it also very convenient to use for page layout in mixing text with images. I also use the program Adobe Photoshop for all the inevitable image-editing tasks such as resizing, cropping, reorienting, repairing, enhancing, and cleaning up images. This program is especially useful for increasing the contrast of black and white images, especially in the case of old text documents to make them easier to read.

An essential hardware adjunct to working with images is the scanner. Home or office scanners range in price from $100 up to $600 depending mostly on resolution and to a lesser degree on the size original they will scan. Except for the most expensive laser printers, printers customarily print out at a resolution of 600 to 1200 dots-per-inch, or DPI. This resolution is usually sufficient for black-and-white images and is the resolution used throughout this book for both text and graphics. Furthermore, most "print-on-demand" printing companies use very large specialized Xerox machines called Docutech or their equivalent when printing between 100 and 5000 copies of a book, and these machines also print at only 600 DPI, the same as most home laser printers. Such large Docutech machines print at a speed of about 7,000 pages per hour, and can usually print at a cost of between two and three cents per page, depending on the size of the production run. Other printing techniques such as photo offset are much more expensive when employed on small production runs, since their setup costs are so high, but they can produce many times higher resolutions. So if you desire to print photographs at higher quality (resolution), it will be much more expensive and will require a better scanner and possibly also a faster computer. This is because of the large amount of digital information in a photograph or graphic. A six-inch square black-and-white photograph scanned at 150 DPI for printing at 600 DPI might generate a file one half megabyte in size. However, the same photograph scanned at 1,200 DPI might generate a file ten or more times larger. If you have a hundred such images in a book, it will start to require significant hard disk space just to store them, plus it will start to take noticeable time to move such images from hard disk to screen when editing your book once the graphic images have been incorporated into the text. My last book of 700 pages had about 100 images in it, and the completed book occupied about ninety megabytes. Thus, for any serious graphics work, it is advisable to have at least a medium speed Pentium computer, preferably with at least sixty-four megabytes of RAM for your photo editing program such as Adobe Photoshop, and preferably also at least a moderately fast, PCI bus video card with at least four megabytes of video RAM on it. If your computer does not meet these requirements, you will experience frequent delays when dealing with graphic images above 150 DPI resolution.

Image Quality vs. Printing Technology

A final consideration when deciding to use higher than 600 DPI for images in your book is the issue of wet ink versus dry ink. All laser and Xerographic printers use heat to fuse (melt) black powder (dry toner) onto the surface of the paper. Images produced with this technology rest on top of the surface of the paper. Thus, fairly inexpensive sixty-pound paper can be used without the image on one side of the page showing through to the back side of the page and vice versa. Such *show-through* can sometimes detract to a marked degree from the desired appearance of the printed page. The offset printing technology on the other hand uses wet ink. Though this technology has a much higher resolution capability, the wet ink used soaks into the paper to some degree, and therefore shows through to a much greater degree than dry toner printing,

when used in combination with the same lighter-weight papers. Those using photo offset printing will usually do so to achieve higher resolution and better image quality, so they will certainly wish to avoid undercutting this quality enhancement by images or even shadows showing through the paper. This is usually accomplished by using heavier papers, surfaced papers, or both, which can greatly increase the cost of the finished book.

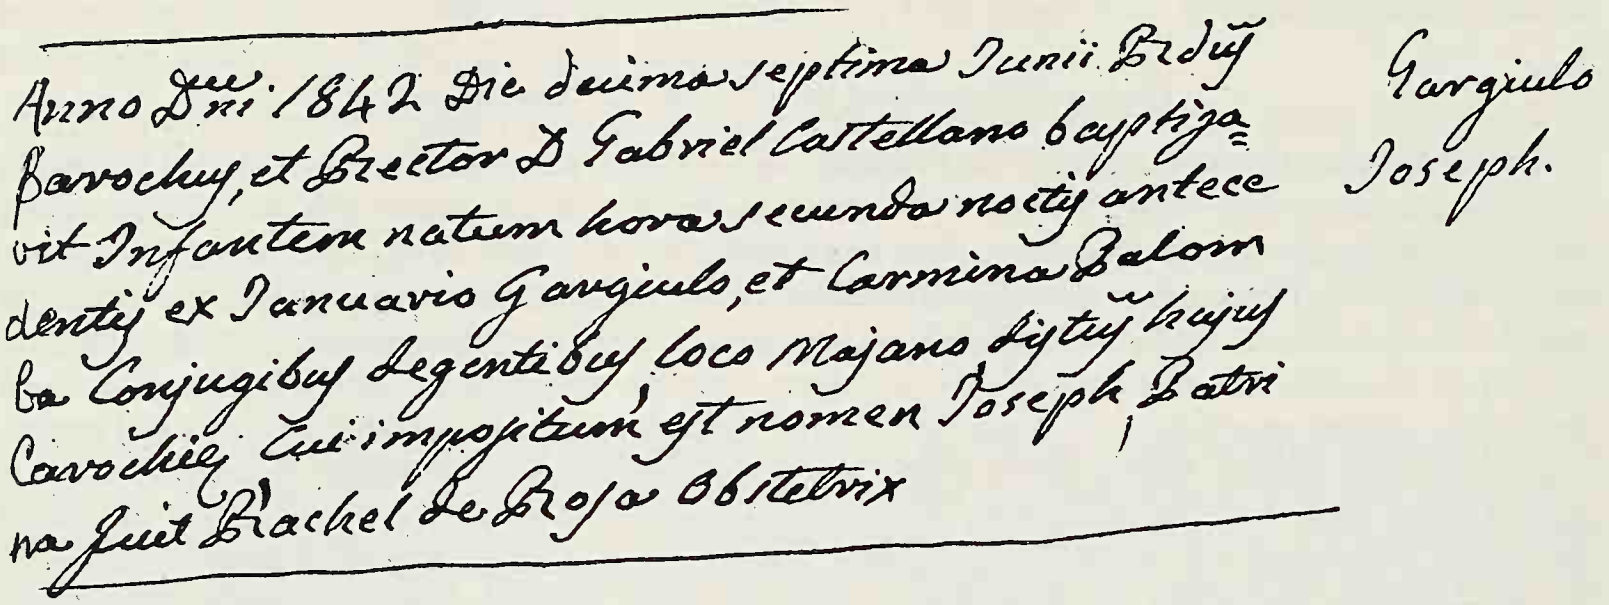
Digital Cameras and the Question of Resolution

Lastly, we need to consider briefly the pros and cons of digital cameras. These first started to become available at reasonable price in 1999 and have many pros, and one very large con. For recording images in the field of documents, people, or places, there is no more convenient tool, since images can be transferred from the camera to the computer directly with no delay for development, and then emailed anywhere in the world in only a two-step process, provided the image is not too large. The greatest advantage of such cameras is that they require almost no skill to operate. You can generally see on the LCD screen on the back of the camera exactly how the image will look on paper. It is almost impossible to take a bad picture. The problem for amateur photographers trying to use photographic film technology to record images of records is that there is an inevitable delay of several days to a week before you learn whether the images are usable. If an image was spoiled for any reason, it is often very time-consuming to return to where the record was found and search out the record a second time. For the sole reason of quickly, reliably, and conveniently capturing images in the field, digital cameras are definitely worth their price. However, the images created by many of the less expensive digital cameras have a major drawback in that they often take very low resolution images at only 72 DPI, or dots per inch. A full-frame shot of a record at 72 DPI is quite readable when printed out at eight and a half by eleven size. However, if you first wish to crop this image somewhat, as is usually the case, then reduce it somewhat in your book, which is also usually the case, you will see that these images are actually quite fuzzy. Thus, most people will probably not find these images of sufficient quality to use in their books. At present is probably necessary to buy at least a medium-priced camera.

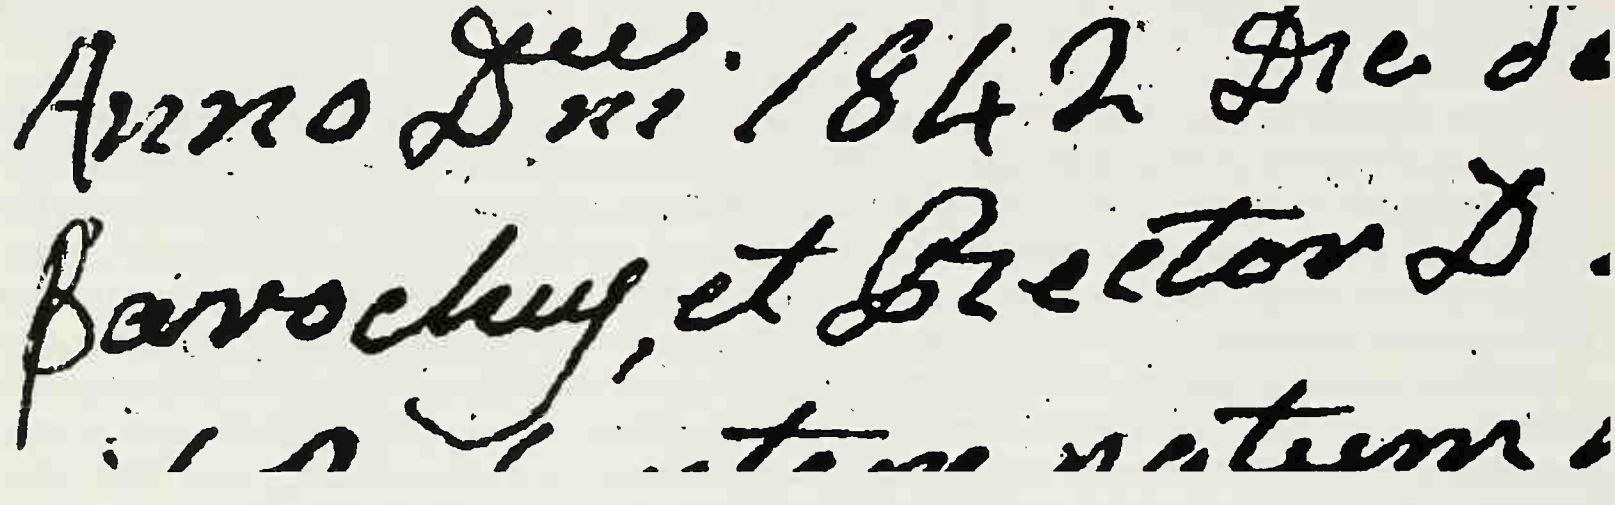
By the end of 2000 much higher-resolution digital cameras were available such as the Nikon model 950 which had a list price of about $800 early in 2000, but which could sometimes be purchased on sale for $500. In "higher resolution" mode these cameras take pictures which are approximately 1200 by 1600 pixels. This produces excellent quality for enlargements of the whole image up to 8 by 10 inches. However, if you need to further enlarge just a small portion of the image, some image degradation will be seen at a print resolution of 600 dots per inch. Nevertheless these cameras are considerably better than earlier less expensive models. Usually one should plan on perchasing an extra thirty-two megabyte memory card with the camera, which will add about $150 to the cost, but which will enable one to store approximately sixty-five images in the camera. The camera stores the images as compressed "JPG" files, so each highest-qualiy image takes up about a half magabyte of storage in the camera, depending on what file compression setting the user choses. The more file compression used, the less resolution the image will have. Users will have to experiment to find the right level of compression and how much enlargement of portions of images can be achieved without excessive quality loss for a particular application.

Generally speaking, for printing balck-and-white images on a 600 DPI device such as a laser printer, and using an 8 1/2 by 11 inch page format, one should plan for an image resolution of at least 150 DPI. The reolution of the average computer monitor is about 72 DPI, so 144 DPI would be about double that. The 144/150 DPI resolution, though only double the 72 DPI screen resolution, nevertheless makes a big difference to both the sharpness of the image and the size of the picture file produced, so that the 144 DPI image is acceptable, whereas the 72 DPI image would usually not be acceptable to most authors. A final consideration is that many digital cameras offer too little memory to store more than perhaps five images, if the images are higher resolution, since higher resolution means larger file sizes. So one needs to make sure one buys both the higher resolution feature as well as sufficient memory in the camera to store at least fifteen

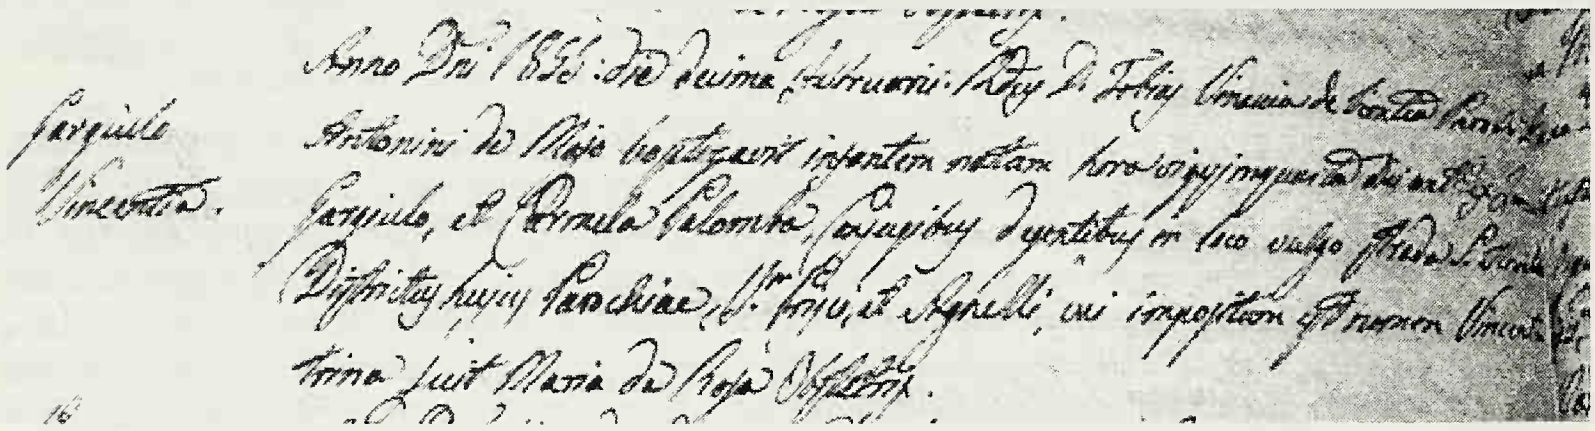
or twenty images made using the higher resolution mode. Most newer models available in 2000 that are above the cheapest level have removable memory media, and usually this removable media is quite tiny in physical size, so that extra media could be carried outside the camera for larger jobs.



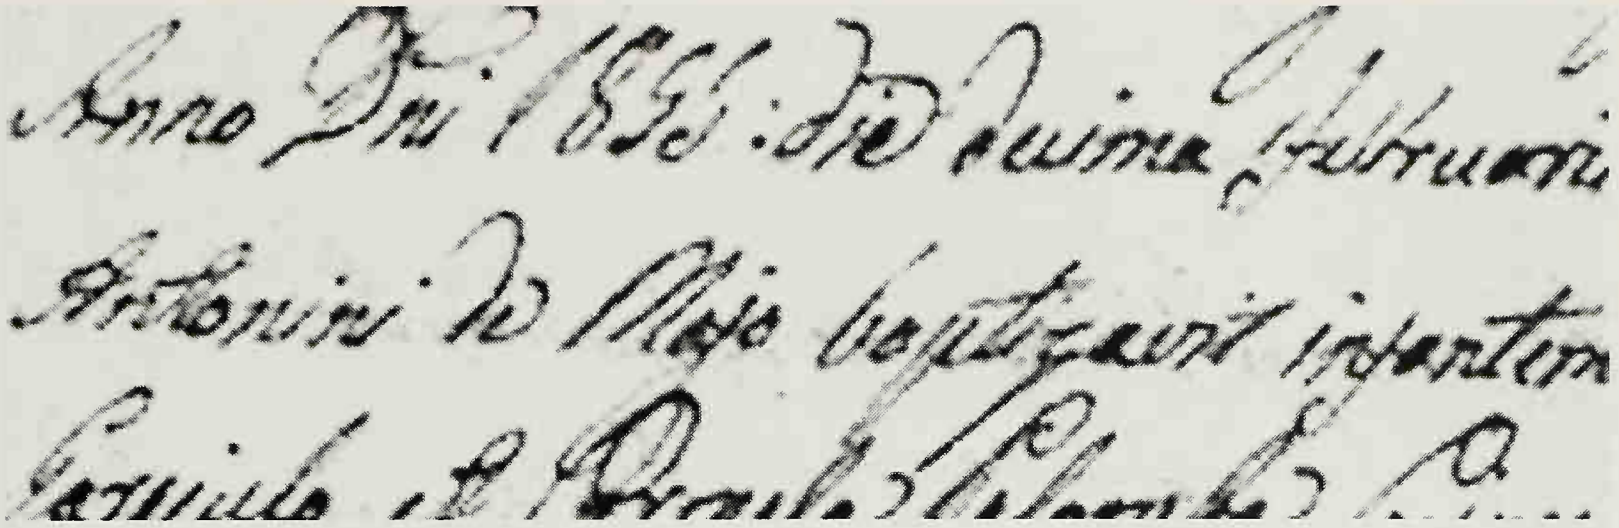
Example of an Italian church record in Latin, which was Xeroxed, then scanned at 600 DPI resolution, cleaned up, and finally enhanced for contrast. This scanned image starts out with a resultion more than eight-times higher than that of the 72 DPI image just below. Thus, it can be enlarged quite a bit without noticeable degradation, whereas the 72 DPI image cannot. The comparison to the digital camera image below can best be made using a magnifying glass.



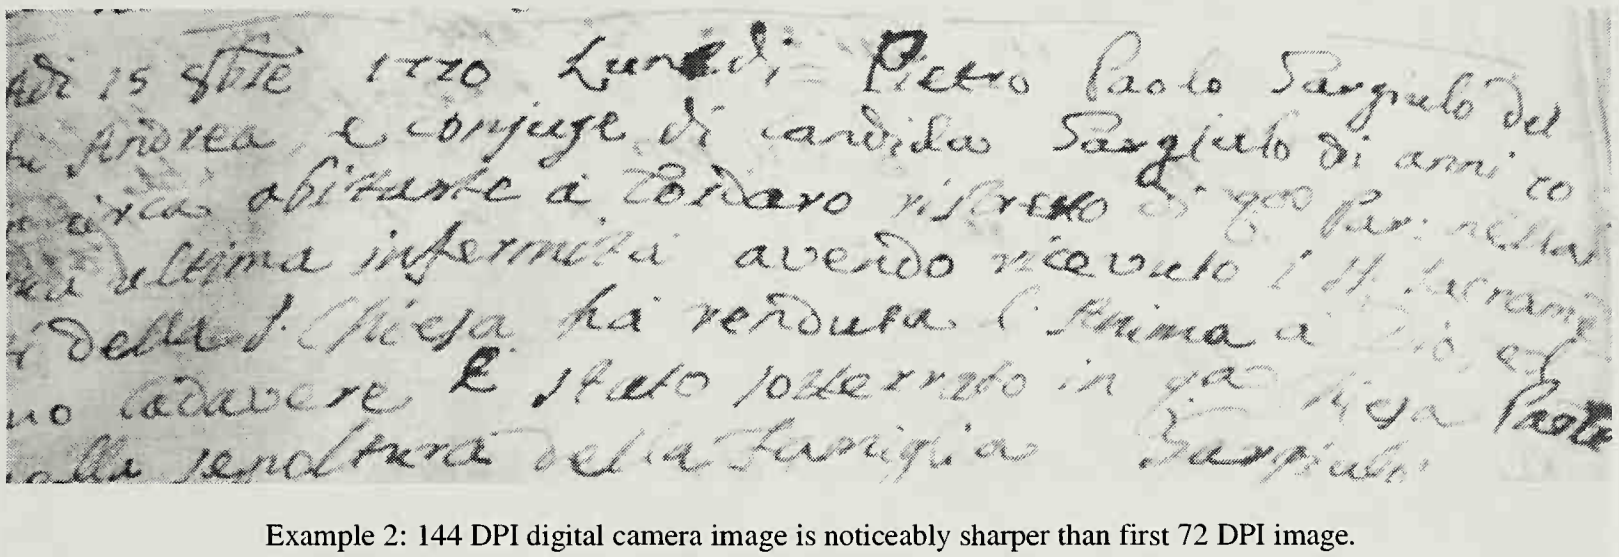
Upper-left corner of 600 DPI image of Xeroxed record above enlarged about six times is still sharp.



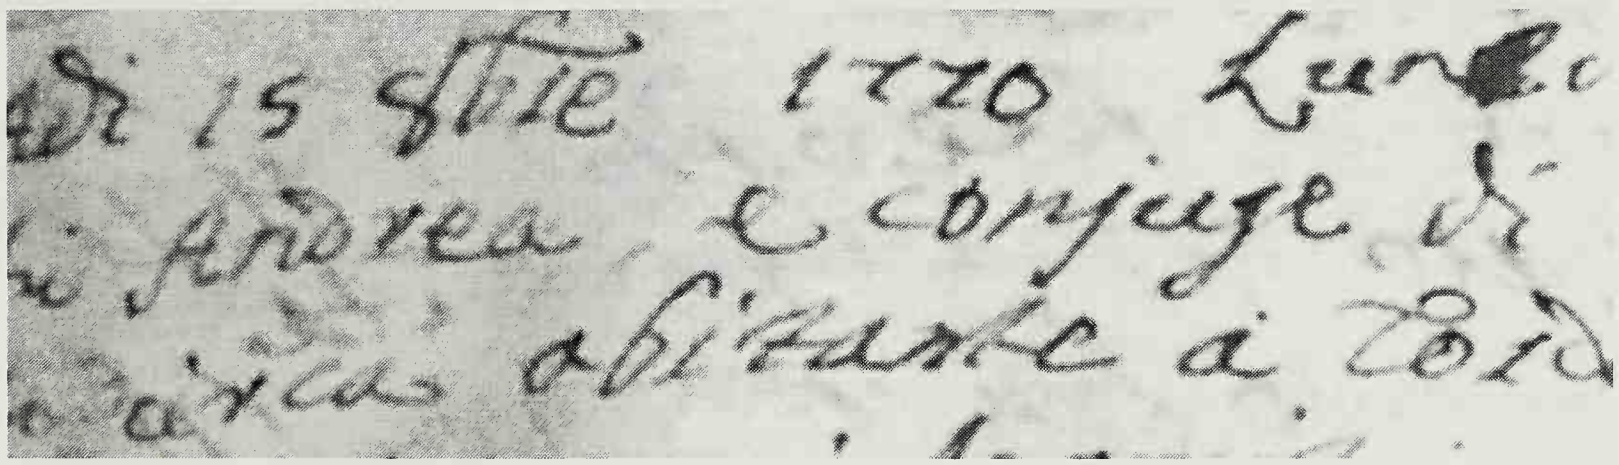
Example 1: Italian record photographed with a digital camera at 72 DPI resolution.



Six-times enlargement of upper-left corner of 72 DPI example 1 above is fuzzy.



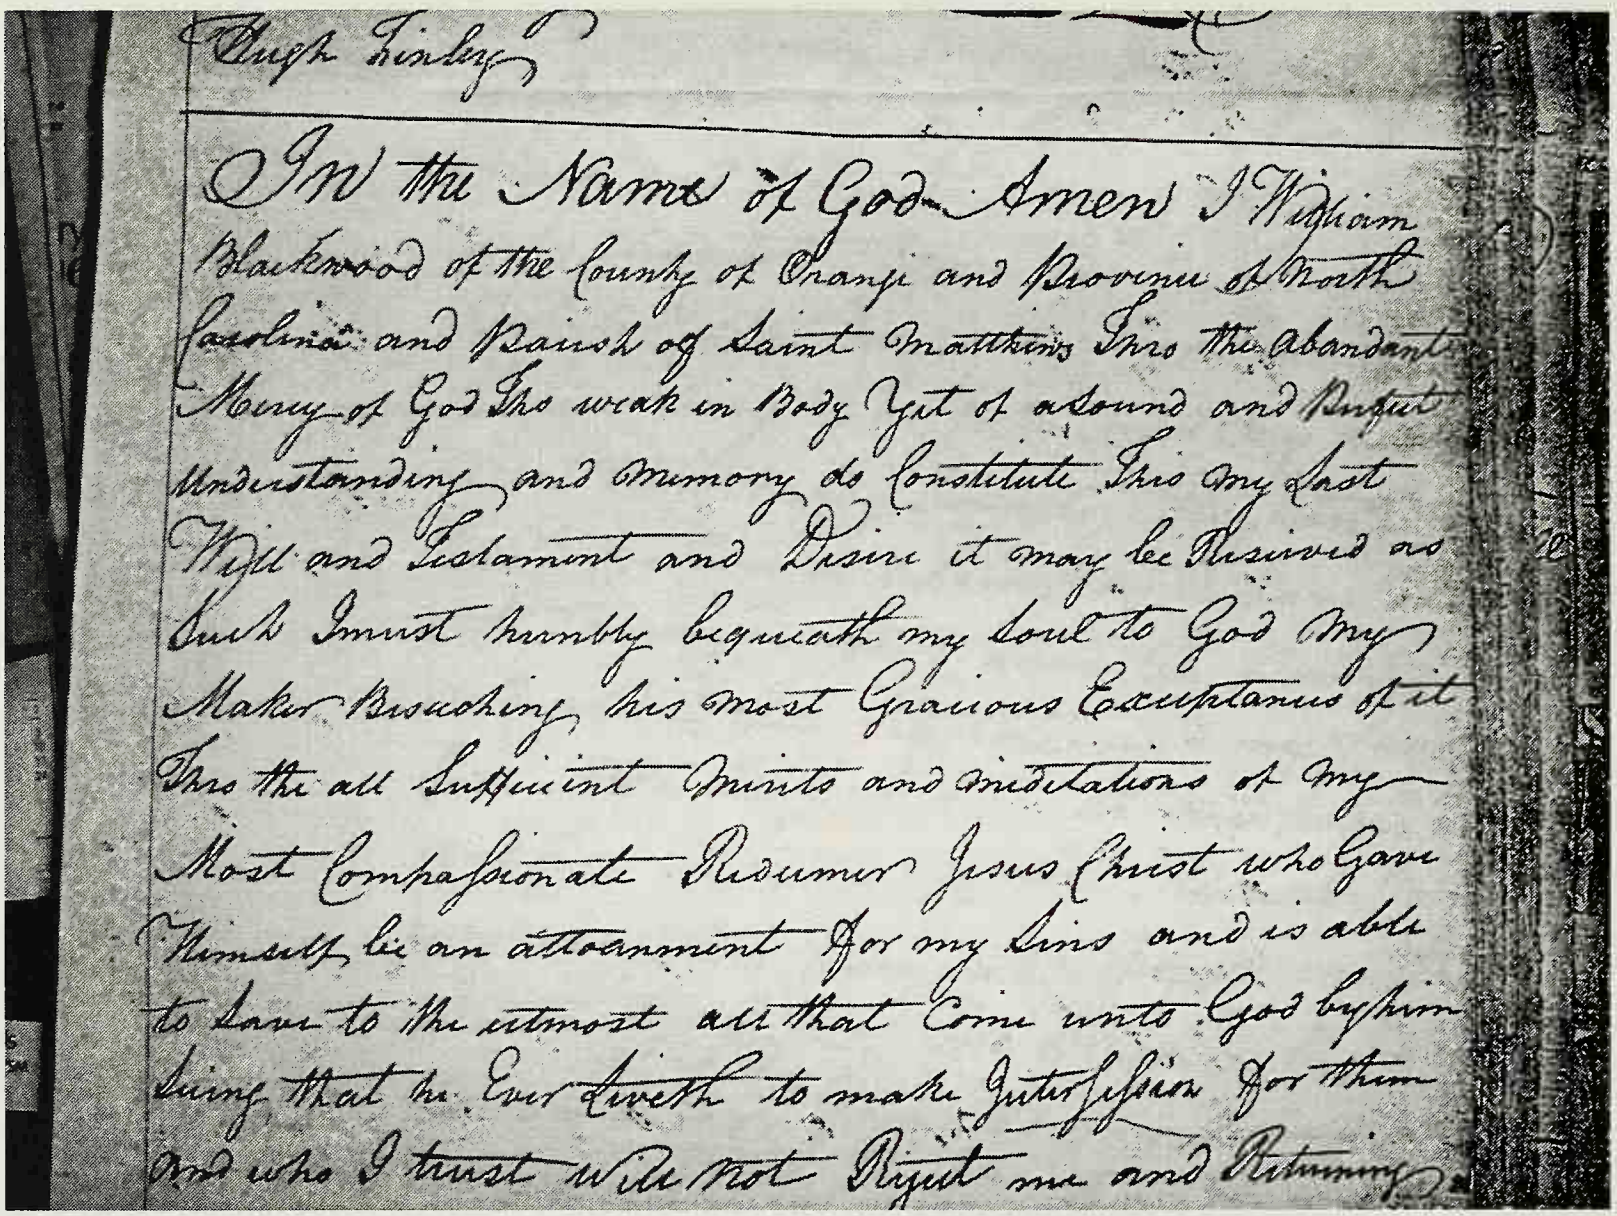
Example 2: 144 DPI digital camera image is noticeably sharper than first 72 DPI image.



Six-times enlargement of 144 DPI image in example 2 above is fuzzy, though less so than that of 72 DPI image in example 1. Enhancement of contrast also emphasizes shadows from ink on back of page "bleeding" through.

The Newest Digital Cameras in Early 2001

Just before completion of this book I purchased a digital camera on sale for $300 with an additional thirty-two megabyte memory card costing $150. This was a model Finepix 1400Z rated at 1.3 megapixels made by Fujifilm. This camera has considerable adjustments and when set for the highest resolution called "fine," uses a compression ratio of only one to four. You can also set either of two file sizes, the larger or higher resolution setting being 1280, which is the width of the image in pixels or dots. With this setting I took the image below of William Blackwood's will made in Orange County, North Carolina.



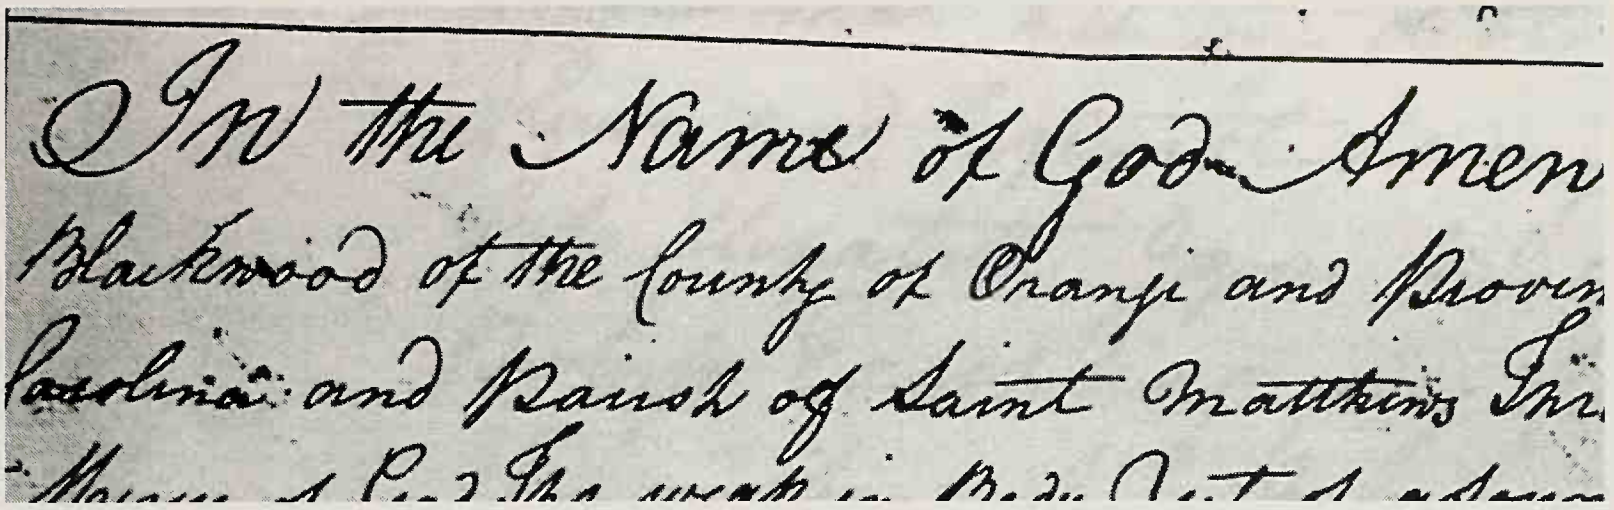
Augt Finley

In the Name of God Amen I William Blackwood of the County of Orange and Province of North Carolina and Parish of Saint Matthews Thro the abundant Mercy of God Tho weak in Body Yet of a sound and Perfect Understanding and Memory do Constitute This my Last Will and Testament and Desire it may be Received as Such I Imprimis humbly bequeath my Soul to God My Maker Beseeching his most Gracious Exemptions of it Thro the all Sufficient Merits and Mediations of my Most Compassionate Redeemer Jesus Christ who Gave Himself an Attonement for my Sins and is able to Save to the utmost all that Come unto God by him Seeing that he Ever Liveth to make Intercession for them And who I trust will Not Reject me and Returning

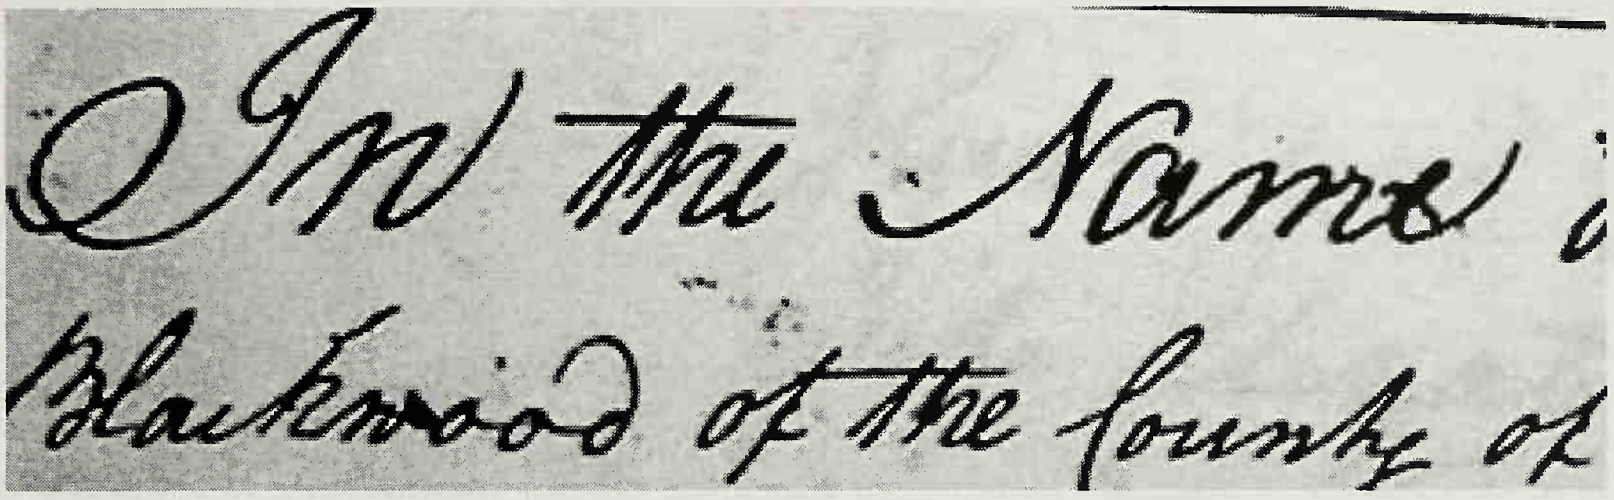
Example 3: Digital camera image at 196 DPI of William Blackwood's will made in Orange County, NC.

With the adjustments described the Finepix 1400Z camera makes a color image with a file size of about one-half megabyte, so it could store about sixty such images on a thirty-two megabyte removable memory card. More importantly these images are formatted to be about eighteen inches wide at a resolution of seventy-two DPI. With some relatively advanced image-handling software such as Adobe Photoshop, the color information can be discarded reducing the file size by about half to one-quarter megabyte. The width can then be reduced to the six and a half inches shown above, which has the effect of increasing the resolution to one hundred ninety-six DPI. This is high enough that an enlargement can be made as shown below, reducing the resolution to only one hundred twenty DPI, which still looks quite good.

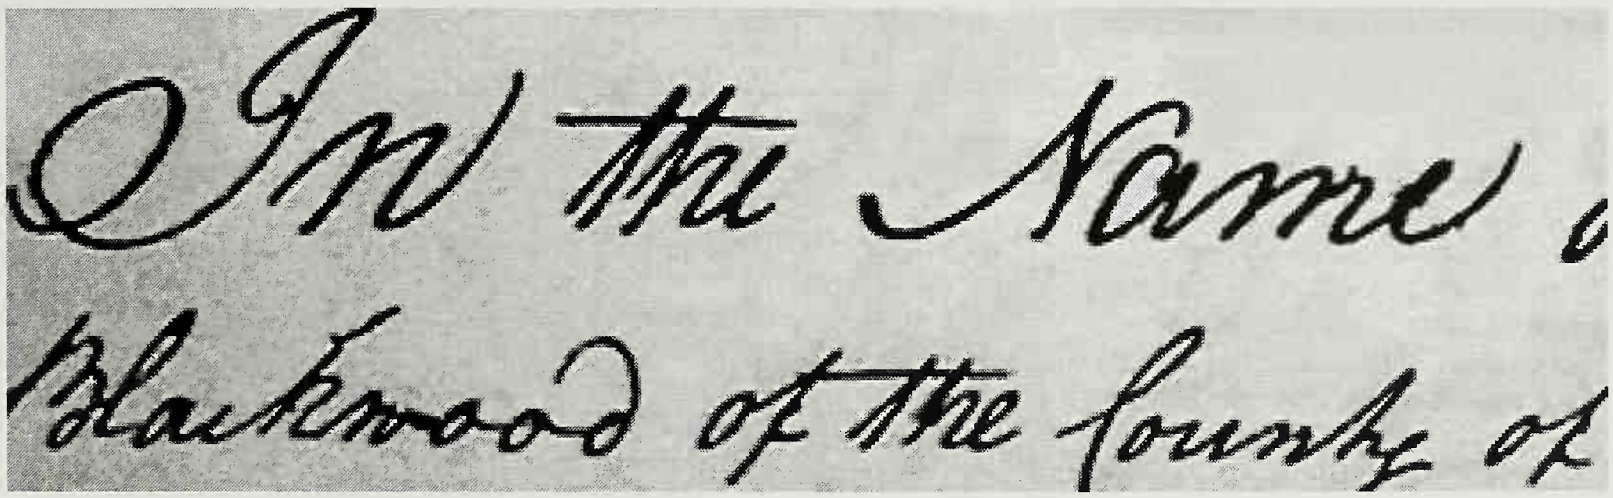
A further enlargement of the same example number three further reduces the resolution to only sixty-eight DPI. The image now loses some of its "smoothness," but is still usable. These examples demonstrate that digital camera technology has advanced to where an affordable camera can be an really excellent tool for recording images of documents in the field. Another advantage of digital imaging is that various clutter, defects, blemishes and so on can relatively easily be removed to improve legibility of the original text, as shown in the final example above, which is identical to the one just above it, except that some extraneous marks have been removed. Image-handling software incorporates many useful tools for improving document images, one of the most useful of which is contrast enhancement.



First enlargement of example 3 image yields a resolution of 120 DPI.



Second enlargement of example 3 image yields a resolution of only 68 DPI, though image is still quite usable.



Yet another version of example three identical to one preceeding, except that some extraneous marks and shadows are removed.
